Manipulation of Fruiting C. J. Wright, 2013-10-22 Manipulation of Fruiting contains the proceedings of the 47th University of Nottingham Easter School in Agricultural Science held at Sutton Bonington England on April 18 22 1988 The papers explore developments in the manipulation of fruiting and cover topics ranging from intra plant competition to pollination fruit set and light interception and canopy manipulation Genetic regulation and chemical manipulation of fruiting are also discussed This monograph is comprised of 26 chapters divided into nine sections The first section deals with the

interactions that occur between vegetative and reproductive growth focusing on source sink effects and dry matter partitioning The following three sections examine the sequential stages of producing a fruit from flower initiation dormancy and anthesis through pollination to fruit set Models that describe dormancy and flowering are presented pollen incompatibility is considered and the time available for pollination is analyzed The physiology of fruit set is discussed together with methods to improve fruit set The next three sections detail methods of manipulating fruiting either physically by altering plant canopy structure and therefore light interception genetically by breeding and selection or chemically by the use of plant growth regulators This book concludes with a look towards the future using genetic manipulation to alter fruit physiology This text will be a valuable resource for crop researchers plant physiologists geneticists and others interested in the state of research into fruiting

Biotic Diversity and Germplasm Preservation, Global Imperatives Lloyd Knutson, Allan K. Stoner, 2012-12-06 Topics for the Beltsville Symposia are selected to highlight specific areas of research and science policy that are of concern to scientists in the Beltsville Area as well as to the general scientific community Each symposium in the series is structured to provide a realistic appraisal of current findings research progress and relevant policy issues within the constraints established by the organizing committee Thus the presentations and discussions that have marked these symposia have had a strong appeal to the broad community of scientists Knowledge of the diversity of living organisms is still quite limited Since the time of Linnaeus about 17 million species have been described The actual number has been estimated between 550 million Many species land races and strains are vanishing Clearly the world's scientific institutions are inadequately equipped to attain sufficient knowledge of a significant fraction of the diverse living forms Also efforts in the collection and preservation of germplasm of plants and animals urgently need to be strengthened These matters are critically important to future generations This symposium addresses vital concerns of biotic diversity and germplasm preservation from diverse perspectives Many of the parts provide concrete recommendations for action and they call attention to areas of research that must be pursued with intensity

Pigment of the Imagination Linda C. Sage, 2012-12-02

Pigment of the Imagination chronicles the story of phytochrome the bright blue photoreversible pigment through which plants constantly monitor the quality and presence of light The book begins with work that led to the discovery of phytochrome and ends with the latest findings in gene regulation and expression The phytochrome story provides a paradigm for the process of scientific discovery This book should thus be of interest to scientists who work on phytochrome and related subjects in plant science as well as to all scientists and science historians interested in how a scientific research field begins develops and matures Documents the science and history of phytochrome research over an 80 year span Combines information from scientific literature archival documents and in person interviews Describes in scholarly and readable style an elegant example of biological discovery Accessible to researchers and students in all areas of science and history of science

Post-Harvest Physiology and Crop Preservation Morris Lieberman, 2012-12-06 Emphasis in agricultural research for many years has concentrated on crop production This emphasis has become more important in recent years with the realization that the population worldwide is outstripping the food supply There is however another side to increasing the availability of the food supply This simply involves preservation of the harvested crop for human consumption The losses incurred in harvesting handling transportation storage and marketing crops have become a greater problem as the distance from the farm to the ultimate consumer increases In the Western world where modern transportation storage facilities and marketing technology are widely used post harvest technology requires a large input of energy which increases costs considerably Therefore losses are more significant and the ability to provide fresh fruits and vegetables out of season at reasonable costs will depend on reduced post harvest losses throughout the marketing chain from the farm gate to the ultimate consumer The reduction in post harvest losses depends on proper use of current technology and further developments derived from a broad spectrum of scientific disciplines Biochemistry plant physiology plant pathology horticulture agronomy physics engineering and agricultural economics all provide knowledge which has been useful and will be useful in the future for improving post harvest technology and crop preservation This volume records the Proceedings of the NATO Advanced Study Institute on Post Harvest Physiology and Crop Preservation held at Sounion Greece April 28 May 8 1981 **Crop Physiology Abstracts**, 1983

Research Instrumentation for the 21st Century Gary R. Beecher, 2012-12-06 The Annual Beltsville Symposium serves as a forum for presenting recent developments in basic research that contribute solutions to agricultural problems The eleventh in this series focuses on instrumentation techniques which provide powerful new research tools These tools will provide information that can lead to a better understanding of biological and physical processes critical to the solution of today's agricultural problems The tools discussed include isotope technology separation techniques microscopy electro magnetic spectroscopy resonance and mass spectrometry and microcomputers This Symposium brought together scientists who are at the forefront of the development of many of these tools and those who are applying them to problems directly related to agricultural research WALDEMAR KLASSEN Director Beltsville Area VII CONTRIBUTORS AND THEIR
