Strategic Planning for Exploration Management

Allen N. Quick, Neal A. Buck, 2012-12-06 In all the industries in which I do management consulting each manager considers his own industry to be truly unique Of course each is different in some respects and each has its own quirks and features However the similarities among industries far outweigh the differences The critical dynamics and the management issues have a great deal in common However there are I believe two industries or segments of industries that have an important critical uniqueness that does distinguish them from the rest One of these is the exploration for undiscovered natural resources notably for oil and gas the other is research In these two industry segments the competition is not nearly so much one firm against another as it is each firm against nature or if you prefer against the unknown This uniqueness not only sets these two industry segments apart from the rest it also helps us to see what they have in common with each other Pure scientific talent ability and genius have direct commercial value We do not have the zero sum game of competition in the market place A discovery by one firm does not usually perceptibly lessen the opportunity of a competitor for a discovery On the contrary a discovery by one firm usually increases the knowledge of the whole industry increasing competitors opportunity for discovery We see the source of continuing life for the rest of the firm

Fast Cycle Time Christopher Meyer, 2010-05-11 Today tens of thousands of companies are struggling to become time based competitors inspired by such corporations as Motorola General Electric Citicorp and a myriad of others who have cut production time in half or more But until now the literature has focused on the theory and philosophy of fast cycle time rather than the tools and techniques for implementing it Here for the first time Christopher Meyer an internationally recognized expert in cycle time reduction presents a step by step blueprint for transforming traditional companies into fast cycle competitors Meyer argues that fast cycle time is achieved not by working faster but by aligning the organization s purpose strategy and structure He demonstrates how the product development cycle must become a learning laboratory in which the four continuous elements Design Fabricate Assemble and Test are analyzed with the intent to improve strategy in the next business cycle Analyzing

strategy and core processes enables management to detect and correct problems earlier and leverage knowledge for improved innovation and increased value for customers

Employing an ongoing case study Core Products Inc throughout the text Meyer shows how to redesign the organization for manufacturability and assembly how to implement multifunctional teams that work how to analyze and map critical cycle time interdependencies such as co location and how to measure the impact of cycle time on business performance Meyer s practical approach provides a simple methodology for organizations to deliver products to customers rapidly accurately and reliably

Chris Meyer interrelates many pieces that we have all read about in different places into a coherent guide to making it happen Ironically as Meyer shows implementing fast cycle time means almost the opposite of what most American managers are inclined to do Many years of practical experience have shown Meyer and his colleagues the wisdom of a paradox that to speed up you often have to slow down
