approach to air power studies **Rhetoric and Reality in Air Warfare** Tami Biddle, 2009-01-10 A major revision of our understanding of long range bombing this book examines how Anglo American ideas about strategic bombing were formed and implemented It argues that ideas about bombing civilian targets rested on and gained validity from widespread but substantially erroneous assumptions about the nature of modern industrial societies and their vulnerability to aerial bombardment These assumptions were derived from the social and political context of the day and were maintained largely through cognitive error and bias Tami Davis Biddle explains how air theorists and those influenced by them came to believe that strategic bombing would be an especially effective coercive tool and how they responded when their assumptions were challenged Biddle analyzes how a particular interpretation of the World War I experience together with airmen s organizational interests shaped interwar debates about strategic bombing and preserved conceptions of its potentially revolutionary character This flawed interpretation as well as a failure to anticipate implementation problems were revealed as World War II commenced By then the British and Americans had invested heavily in strategic bombing They saw little choice but to try to solve the problems in real time and make long range bombing as effective as possible Combining narrative with analysis this book presents the first ever comparative history of British and American strategic bombing from its origins through 1945 In examining the ideas and rhetoric on which strategic bombing depended it offers critical insights into the validity and robustness of those ideas not only as they applied to World War II but as they apply to contemporary warfare **Library of Congress Subject Headings** Library of Congress, Library of Congress.
