Homes for a Changing Climate Will Anderson,2009-10-14 An exploration into the history of our collective response to the challenges of extreme weather conditions and climate At the beginning of the twenty first century the world finally woke up to the reality of climate change and began the arduous task of freeing itself from dependence on fossil fuels But the time lag in the Earth s ecosystem is such that our best efforts to cut carbon today will make little difference to the changing climate of the next 30 years As we work towards a secure low carbon future we must address the changes that are already taking place in the planet s climate We must learn to live with higher temperatures intense rainstorms rising sea levels and prolonged drought We must also confront the secondary impacts of climate change especially on energy and food security Britain has a mild temperate climate where occasional weather

extremes tend to have serious impacts because we are simply not prepared for them Yet across the world communities have been living with such extremes for millennia If we have the imagination to learn from others and rethink the ways we build and live together we can face this unsettling future with confidence Homes for a Changing Climate celebrates this collective wisdom exploring traditional and contemporary responses to the challenges of climate and illustrating the many ways in which houses can be designed built and adapted to cope with these challenges Examples are drawn from across Europe including the supervolcano of Thera the 100mph winds of the Western Isles and the cutting edge eco building projects in Britain Based on the climate projections for the UK published by the Met Office in June 2009 Homes for a Changing Climate combines inspiring case studies striking photography and practical advice to create a book of imagination and hope in uncertain times
