industrial civilization For business and labor historians and for historians of American technology and industrialization Hounshell's book will fill many gaps in the history of the technical contours of modern industrial America the book begins with an examination of the origins of the American system of manufactures in government and private arms production and then moves to the sewing machine woodworking agricultural equipment bicycle and automobile industries It touches on the important inventors and innovators and describes their fundamental contributions in these American industries Most of the principal figures and institutions are covered Simeon North Eli Whitney Thomas Blanchard John H Hall and Samuel Colt in armories Eli Terry and Seth Thomas in the clockmaking industry the Wheeler and Wilson Willcox and Gibbs and Singer sewing machine firms the Singer woodworking plant the McCormick Reaper works the Columbia Pope and Western Wheel Works bicycle companies and the Ford and General Motors automotive corporations Hounshell's work is a major contribution to the social history of technical innovators and their innovations All in all From the American System to Mass Production is an impressive work In his documentation of the history of American industrial technology Hounshell has demonstrated the slow evolution and the near failure of large scale capital intensive and work degrading industrial systems Whereas other historians of technology have tended to tread too lightly on the social dimensions of technical change Hounshell has provided an excellent social analysis of the networks of innovators and their role in the diffusion of armory practices and other industrial advances from industry to industry Technology and Culture Mr Hounshell is an enthusiastic lively writer yet very careful scholar He is cautious in his conclusions and candid about what is debatable He offers several sides of every issue he does not judge particular technologies as good or bad What stands out in this history is how slowly what appears to be a sensible productive and efficient system of manufacturing was adopted chiefly because it required a change in the mind set of managers changes in skills and work habits of workers and disciplined procedures and practices throughout the plants New York Times Book Review David Hounshell's history of the evolution of American production methods has few rivals in execution of the theme it has none Hounshell carefully documents the development transfer and modification of the technology of the manufacture of interchangeable parts from firm to firm and industry to industry A series of excellent technical photographs and Hounshell's own field trials support his argument Science A meticulous study of mass production's roots and early flowering An able researcher Hounshell follows the trail of early manufacturing ideas and shows how they were gradually perfected and diffused throughout different industries before converging in Ford's miracle at Highland Park Wall Street Journal An important study which offers a convincing reinterpretation of the development of mass production in the United States Hounshell has combined substantial new archival research with a synthesis of the mass of new work completed by others in the past three decades Journal of Economic History *Design in the USA* Jeffrey L. **Eugenic Design** Christina Cogdell, 2004 In 1939 Vogue magazine invited commercial designer Raymond Loewy and eight of his contemporaries including Walter Dorwin Teague Egmont Arens and Henry Dreyfuss to design a dress for the Woman of the Future as part of its special issue promoting the New York World's Fair and its theme The World of Tomorrow While focusing primarily on her clothing and accessories many commented as well on the future woman's physique predicting that her body and mind would be perfected through the implementation of eugenics Industrial designers' fascination with eugenics especially that of Norman Bel Geddes began during the previous decade and its principles permeated their theories of the modern design style known as streamlining In *Eugenic Design* Christina Cogdell charts new territory in the history of industrial design popular science and American culture in the 1930s by uncovering the links between streamline design and eugenics the pseudoscientific belief that the best human traits could and should be cultivated through selective breeding Streamline designers approached products the same way eugenicists approached bodies Both considered themselves to be reformers advancing evolutionary progress through increased efficiency hygiene and the creation of a utopian ideal type Cogdell reconsiders the popular streamline style in U.S. industrial design and proposes that in theory rhetoric and context the style served as a material embodiment of eugenic ideology With careful analysis and abundant illustrations *Eugenic Design* is an ambitious reinterpretation of one of America's most significant and popular design forms ultimately grappling with the question of how ideology influences design

*The Development of Marketing Management* Kazuo Usui, 2024-11-01 There has been much discussion about the origin of marketing and marketing thought and whether it was truly American in origin Nevertheless it is true that US marketing management thought was very influential throughout the world in the latter half of the twentieth century becoming dominant after the Second World War In order to recognize why and how this kind of thought developed in the USA it is necessary to explore the historical contexts in which the marketing management thought was produced and developed at this time as well as the contents of the thought This work argues that while doubts about the US origin of marketing are acceptable marketing management thought which especially appeals to mass producers such as the USA developed according to their particular needs This book looks at the relationship between theories of marketing and the historical context in which they were developed rescuing them from later generalizations that failed to take into account contemporary social and economic factors

**From the American System to Mass Production, 1800-1932** David Hounshell, 1984 David A Hounshell's widely acclaimed history explores the American genius for mass production and traces its origins in the nineteenth century American system of manufacture Previous writers on the American system have argued that the technical problems of mass production had been solved by armsmakers before the Civil War Drawing upon the extensive business and manufacturing records of leading American firms Hounshell demonstrates that the diffusion of arms production technology was neither as fast nor as smooth as had been assumed Exploring the manufacture of sewing machines and furniture bicycles and reapers he shows that both the expression of mass production and the technology that lay behind it were developments of the twentieth century attributable in large part to the Ford Motor Company Hounshell examines the importance of individuals in the diffusion and development of production technology and the central place of marketing strategy in the success of selected American manufacturers Whereas Ford was the seedbed of the assembly line revolution it was General Motors that initiated a new era with its introduction of the annual model change With the new marketing strategy the technology of the changeover became of paramount importance Hounshell chronicles how painfully Ford learned this lesson and recounts how the successful mass production of automobiles led to the establishment of an ethos of mass production to an era in which proponents of Fordism argued that mass production would solve all of America's social problems
