Streb And Coping:

Positive Psychology in Health Management Anni Wang, Fei Fei Huang, Yufang Guo, Fang Lei, Yuting Song, 2023-12-13

Positive psychology aims to understand how people can better their lives and ultimately flourish. Since Martin Seligman spearheaded this movement of looking for the positives in life rather than focusing on the negatives, substantial research has been conducted. This research indicates that positive psychological resources such as resilience, self-efficacy, optimism, hope, and self-esteem can help individuals build their personal capabilities, which are associated with higher levels of physical, psychological, social, and behavioral health. Health management is also a broad topic containing management of all health-related issues involving policy making, legal regulation, workforce management, healthcare quality, specific disease management, etc. There has been a drastic increase in research on applying positive psychology to health management. The increasing theoretical and empirical studies have revealed that positive psychological theories have positive effects on the patients' physical and mental health, quality of life, and on healthcare workers' job satisfaction, burnout, and quality of work life. Disease management and health workforce management are two major subjects that involve positive psychology that have been widely investigated in the past few years. Therefore, by combining positive psychology and health management, this topic aims to facilitate cutting-edge ideas and research to explore multidisciplinary approaches of positive psychology in disease management and health workforce management. Our specific aim is to explore how the construct of positive psychology mitigates the negative consequences on patients or family with disease burden and healthcare workers under job-related stress. Furthermore, we hope to recognize the distinct adaptive trajectories of these areas on which positive psychological resources may have an effect. Based on these, we want to highlight the efficacy, effectiveness, and implementation of positive psychology-based intervention for patients or healthcare workers to promote resiliency. Through the achievement of these aims, we also hope to develop new theories and instruments which are culturally sensitive and contextually innovative.

Smirnov, 2008-04-15 Reactive oxygen species ROS are produced during the interaction of metabolism with oxygen. As ROS have the potential to cause oxidative damage by reacting with biomolecules, research on ROS has concentrated on the oxidative damage that results from exposure to environmental stresses and on the role of ROS in defence against pathogens. However, more recently it has become apparent that ROS also have important roles as signalling molecules. A complex network of enzymatic and small molecule antioxidants controls the concentration of ROS and repairs oxidative damage, and research is revealing the complex and subtle interplay between ROS and antioxidants in controlling plant growth development and response to the environment. This book covers these new developments, generally focussing on molecular and biochemical details and providing a point of entry to the detailed literature. It is directed at researchers and professionals in plant molecular biology, biochemistry and cell biology in both the academic and industrial sectors. **Therapeutic Process and Well-Being in Forensic Psychiatry and Prison** Manuela Dudeck, Jürgen Leo Müller, Birgit Angela Völlm, Najat R. Stark, Tapia, Fuselier, Bunch 2022 enhanced with prominent ethical decision making models. These principles build upon the SAMHSA 2014 conceptualization of trauma informed care, address key concepts such as Adverse Childhood Experiences (ACEs) and their long term impact, marginalization, stress, the influence of military and law enforcement experience and others. Despite distinctions between the diversity of helping professions in credentials, scope of practice and theoretical approach, the same decision making models for trauma informed care is a requirement for best practice. Thus, this volume is designed to address the needs of professionals serving diverse clientele, particularly those who've experienced trauma and adversity. Practitioners may utilize this text as a guide to assist with ethical decision making when working with client survivors of trauma, and educators may select this text as required reading to support the development of trauma informed clinicians in training.
