## **Streb In The Earth:**

**Speaking of Dance** Joyce Morgenroth, 2005-07-08 Speaking of Dance Twelve Contemporary Choreographers on Their Craft delves into the choreographic processes of some of America's most engaging and revolutionary dancemakers. Based on personal interviews, the book's narratives reveal the methods and quests of, among others, Merce Cunningham, Meredith Monk, Bill T. Jones, Trisha Brown, and Mark Morris. Morgenroth shows how the ideas, craft, and passion that go into their work have led these choreographers to disrupt known forms and expectations. The history of dance in the making is revealed through the stories of these intelligent, articulate, and witty dance masters.

**Choreographing Difference** Ann Cooper Albright, 2010-06-01 The choreographies of Bill T. Jones, Cleveland Ballet, Dancing Wheels, Zab Maboungou, David Dorfman, Marie Chouinard, Jawole Willa Jo Zollar, and others have helped establish dance as a crucial discourse of the 90s. These dancers, Ann Cooper Albright argues, are asking the audience to see the body as a source of cultural identity, a physical presence that moves with and through its gendered, racial, and social meanings. Through her articulate and nuanced analysis of contemporary choreography, Albright shows how the dancing body shifts conventions of representation and provides a critical example of the dialectical relationship between cultures and the bodies that inhabit them. As a dancer, feminist, and philosopher, Albright turns to the material experience of bodies, not just the body as a figure or metaphor, to understand how cultural representation becomes embedded in the body. In arguing for the intelligence of bodies, *Choreographing Difference* is itself a testimonial giving voice to some important political, moral, and artistic questions of our time. Ebook Edition. **Gravitational Biology I** Markus Braun, Maik Böhmer, Donat-Peter Häder, Ruth Hemmersbach, Klaus Palme, 2018-07-20 This book summarizes what is currently known about gravity sensing and response mechanisms in microorganisms, fungi, lower, and higher plants, starting from the historical eye-opening experiments from the 19th century up to today's extremely rapid advancing cellular, molecular, and biotechnological research. All forms of life are constantly exposed to gravity, and it can be assumed that almost all organisms have developed sensors and respond in one way or the other to the unidirectional acceleration force. This book shows us some of these different ways. The book is written for plant biologists and microbiologists as well as scientists interested in space and gravitational biology.
