Marwick, 2012-12-06 W F ARMSTRONG While stress echocardiography is not the first technique to be applied to patients for the diagnosis of coronary artery disease it represents an important clinical tool likely to become of increasing pertinence in today's era of cost containment and mandated cost effectiveness of diagnosis It may be the most rapidly expanding area of clinical echocardiography today Stress echocardiography as we know it today represents the natural conclusion and merger of observations made over fifty years ago In 1935 Tennant and Wiggers demonstrated that the immediate result of a coronary occlusion was an instantaneous abnormality of wall motion 1 As viewed from the surface of the heart in an open chest dog preparation cyanosis and obvious paradoxical bulging of the left ventricular wall was noted At a similar time Masters and co workers using fairly rudimentary exercise devices described the response of the human cardiovascular system to sustained exercise Figure 1 2 These two observations diverged for four decades while clinical investigation was pursued along the two parallel lines Stress Echocardiography Eugenio Picano, 2013-03-14 After ten years of life restricted to the scientific world of research stress echocardiography today appears on the clinical stage as a clean and efficient option for diagnostic imaging

of myocardial ischemia At the Institute of Clinical Physiology of Pisa stress echocardiography has successfully moved from the status of fancy pathophysiological toy to one of practical diagnostic weapon in spite of the availability of a strong and sophisticated nuclear cardiology department This textbook stems from a long standing experience and describes in a systematic fashion the new diagnostic entity of stress echocardiography the pathophysiological and experimental roots the methodology the clinical fruits and the new branches of possible future development Only time will tell whether the new plant of the diagnostic forest will grow tall but certainly its place is no longer in the academic greenhouse with exotic entities but rather in the open air of the real world where this baedeker might be of help to the clinician and the researcher interested in ischemic heart disease
