Hewer s Textbook of Histology for Medical Students Ninth Edition Revised focuses on the minute structure of the cells  
tissues and organs of the human body and the reactions of tissues and cells to various conditions The publication first  
elaborates on the techniques used in the study of cells and tissues cell and cell division and epithelia Discussions focus on the  
qualitative and quantitative methods for the identification of the composition of cells and tissues surface membrane of the  
cell cytoplasmic contents and the nucleus The text then examines blood and lymph development and destruction of blood  
corpuscles and connective tissues The manuscript takes a look at adipose tissue cartilage and bone including development  
and functions of adipose tissue hyaline cartilage fibro cartilage elastic cartilage and joints and synovial membranes The book  
then ponders on muscular tissue nervous tissue peripheral nerves ganglia neuroglia and meninges blood circulatory system

Lloyd,1898      **Biological Micro- and Nanotribology** Matthias Scherge,Stanislav S. N. Gorb,2013-11-11 Ever since the  
genesis of life and throughout the course its further evolution Nature has constantly been called upon to act as an engineer  
in solving technical problems Organisms have evolved a variety of well defined shapes and structures Although often  
intricate and fragile they can nonetheless deal with extreme mechanical loads Some organisms live attached to a substrate  
others can also move fly swim and dive These abilities and many more are based on a variety of ingenious structural solutions  
Understanding these is of major scientific interest since it can give insights into the workings of Nature in evolutionary  
processes Beyond that we can discover the detailed chemical and physical properties of the materials which have evolved can  
learn about their use as structural elements and their biological role and function This knowledge is also highly relevant for  
technical applications by humans Many of the greatest challenges for today s engineering science involve miniaturization  
Insects and other small living creatures have solved many of the same problems during their evolution Zoologists and  
morphologists have collected an immense amount of information about the structure of such living micromechanical systems  
We have now reached a sophistication beyond the pure descriptive level Today advances in physics and chemistry enable us  
to measure the adhesion friction stress and wear of biological structures on the micro and nanonewton scale Furthermore  
the chemical composition and properties of natural adhesives and lubricants are accessible to chemical analysis
