Fountain,2018-08-07 New York Times Book Review Editors Choice A riveting narrative about the biggest earthquake in North American recorded history the 1964 Alaska earthquake that demolished the city of Valdez and swept away the island village of Chenega and the geologist who hunted for clues to explain how and why it took place At 5 36 p m on March 27 1964 a magnitude 9 2 earthquake the second most powerful in world history struck the young state of Alaska The violent shaking followed by massive tsunamis devastated the southern half of the state and killed more than 130 people A day later George Plafker a geologist with the U S Geological Survey arrived to investigate His fascinating scientific detective work in the months that followed helped confirm the then controversial theory of plate tectonics In a compelling tale about the almost unimaginable brute force of nature New York Times science journalist Henry Fountain combines history and science to bring the quake and its aftermath to life in vivid detail With deep on the ground reporting from Alaska often in the company of George Plafker Fountain shows how the earthquake left its mark on the land and its people and on science      **NGDC Key to**

Birkland, 2006-11-07 Even before the wreckage of a disaster is cleared one question is foremost in the minds of the public What can be done to prevent this from happening again Today news media and policymakers often invoke the lessons of September 11 and the lessons of Hurricane Katrina Certainly these unexpected events heightened awareness about problems that might have contributed to or worsened the disasters particularly about gaps in preparation Inquiries and investigations are made that claim that lessons were learned from a disaster leading us to assume that we will be more ready the next time a similar threat looms and that our government will put in place measures to protect us In *Lessons of Disaster* Thomas Birkland takes a critical look at this assumption We know that disasters play a role in setting policy agendas in getting policymakers to think about problems but does our government always take the next step and enact new legislation or regulations To determine when and how a catastrophic event serves as a catalyst for true policy change the author examines four categories of disasters aviation security homeland security earthquakes and hurricanes He explores lessons learned from each focusing on three types of policy change change in the larger social construction of the issues surrounding the disaster instrumental change in which laws and regulations are made and political change in which alliances are created and shifted Birkland argues that the type of disaster affects the types of lessons learned from it and that certain conditions are necessary to translate awareness into new policy including media attention salience for a large portion of the public the existence of advocacy groups for the issue and the preexistence of policy ideas that can be drawn upon This timely study concludes with a discussion of the interplay of multiple disasters focusing on the initial government response to Hurricane Katrina and the negative effect the September 11 catastrophe seems to have had on reaction to that tragedy      **Earthquake Information Bulletin** ,1971
