Digital Media Ecologies Sy Taffel, 2019-10-31 Our digital world is often described using terms such as immateriality and virtuality The discourse of cloud computing is the latest in a long line of nebulous dematerialising tropes which have come to dominate how we think about information and communication technologies Digital Media Ecologies argues that such rhetoric is highly misleading and that engaging with the key cultural agential ethical and political impacts of contemporary media requires that we do not just engage with the surface level of content encountered by the end users of digital media but that we must additionally consider the affordances of software and hardware Whilst numerous existing approaches explore content software and hardware individually Digital Media Ecologies provides a critical intervention by insisting that addressing contemporary technoculture requires a synthetic approach that traverses these three registers Digital Media Ecologies re envisions the methodological approach of media ecology to go beyond the metaphor of a symbolic information environment that exists alongside a material world of tantalum turtles and tornados It illustrates the social cultural political and environmental impacts of contemporary media assemblages through examples that include mining conflict sustaining minerals climate change blogging iOS jailbreaking and the ecological footprint of contemporary computing infrastructures Alongside foregrounding the deleterious social and environmental impacts of digital technologies the book considers numerous ways that these issues are being tackled by a heterogeneous array of activists academics hackers scientists and citizens using the same technological assemblages that ostensibly cause these problems

Institutions and Ideology Peter Walgenbach, 2009-09-01 Contributes to the literature on the sociology of organizations and management especially to

sociological institutionalism This title covers the empirical areas that range from technology and software development the brewing industry custodial facilities to the organization of birthing *Bridging the Global Digital Divide* Jeffrey James, 2003-01-01 According to many observers the global digital divide the extent to which information technology is benefiting developed as opposed to developing countries has already established itself as the single most pervasive theme of the twenty first century The purpose of this book is to explore some of the ways in which this divide can be overcome both within and between nations Employing a rigorous analytical framework the author bases his analysis on the concept of international technological dualism He argues that one possible solution to the problem is the availability of affordable technologies such as low cost computers which are specifically designed for the income levels and socio economic conditions of developing countries He also emphasizes that the most important aim of any policy measure should be to provide universal access to information technologies rather than individual ownership Depending on whether or not this divide can be bridged will to a large degree determine whether developing countries are able to attain higher levels of productivity prosperity and global integration Information Security Josef Pieprzyk, Eiji Okamoto, Jennifer Seberry, 2003-07-31 The third International Workshop on Information Security was held at the University of Wollongong Australia The conference was sponsored by the Centre for Computer Security Research University of Wollongong The main themes of the conference were the newly emerging issues of Information Security Multimedia copyright protection and security aspects of e commerce were two topics that clearly reflect the focus of the conference Protection of the copyright of electronic documents seems to be driven by strong practical demand from the industry for new efficient and secure solutions Although e commerce is already booming it has not reached its full potential in terms of new efficient and secure e commerce protocols with added properties There were 63 papers submitted to the conference The program committee accepted 23 Of those accepted six papers were from Australia five from Japan two each from Spain Germany and the USA and one each from Finland and Sweden Four papers were co authored by international teams from Canada and China Korea and Australia Taiwan and Australia and Belgium France and Germany respectively Final versions of the accepted papers were gathered using computing and other resources of the Institute of Mathematics Polish Academy of Sciences Warsaw Poland We are especially grateful to Jerzy Urbanowicz and Andrzej Pokrzywa for their help during preparation of the proceedings **Encyclopedia of Digital Government** Anttiroiko, Ari-Veikko, Malkia, Matti, 2006-07-31 Containing more than 250 articles this three volume set provides a broad basis for understanding issues theories and applications faced by public administrations and public organizations as they strive for more effective government through the use of emerging technologies This publication is an essential reference tool for academic public and private libraries *Dataquest*, 2006 *In Silico Toxicology* Mark T. D. Cronin, Judith C. Madden, 2010 In Silico methods to predict toxicity have become increasingly important recently particularly in light of European legislation such as REACH and the Cosmetics Regulation They are also being used extensively worldwide e.g. in the

USA Canada Japan and Australia In assessing the risk that a chemical may pose to human health or to the environment focus is now being directed towards exploitation of in silico methods to replace in vivo or in vitro techniques A prediction of potential toxicity requires several stages 1 Collation and organisation of data available for the compound or if this is not available information for related compounds 2 An assessment of the quality of the data 3 Generation of additional information about the compound using computational techniques at various levels of complexity calculation of physico chemical properties 2 D 3 D MO descriptors and specific receptor modelling interaction 4 Use of an appropriate strategy to predict toxicity ie a statistically valid method which makes best use of all available information mechanism of action activity for related compounds extrapolation across species and endpoints likely exposure scenario amounts over time etc 5 Consideration then needs to be given to how this information is used in the real world ie use of expert systems tools as relevant to assessors if sufficiently different to previous weight of evidence approaches 6 Finally evidence should be presented from case studies within this area No other publication brings together information on all of these areas in one book and this publication is unique in that it provides a logical progression through every one of these key stages and defines the use of computational approaches to predict the environmental toxicity and human health effects of organic chemicals The volume is aimed at the developers and users of in silico toxicology and provides an analysis of all aspects required for in silico prediction of toxicology including data collation quality assessment and computational approaches The contributions from recognised leaders in each of these areas include evidence of the use and applicability of approaches using real world case studies concerning both environmental and human health effects The book provides a very useful single source reference for people working in this area including academics professionals under and post graduate students as well as Governmental Regulatory Scientists involved in chemical risk assessment and REACH

Climate Change and Critical Agrarian Studies Ian Scoones, Saturnino M. Borrás Jr., Amita Baviskar, Marc Edelman, Nancy Lee Peluso, Wendy Wolford, 2023-11-30 Climate change is perhaps the greatest threat to humanity today and plays out as a cruel engine of myriad forms of injustice violence and destruction The effects of climate change from human made emissions of greenhouse gases are devastating and accelerating yet are uncertain and uneven both in terms of geography and socio economic impacts Emerging from the dynamics of capitalism since the industrial revolution as well as industrialisation under state led socialism the consequences of climate change are especially profound for the countryside and its inhabitants The book interrogates the narratives and strategies that frame climate change and examines the institutionalised responses in agrarian settings highlighting what exclusions and inclusions result It explores how different people in relation to class and other co constituted axes of social difference such as gender race ethnicity age and occupation are affected by climate change as well as the climate adaptation and mitigation responses being implemented in rural areas The book in turn explores how climate change and the responses to it affect processes of social differentiation trajectories of accumulation and in turn agrarian politics Finally the book examines what

strategies are required to confront climate change and the underlying political economic dynamics that cause it reflecting on what this means for agrarian struggles across the world The 26 chapters in this volume explore how the relationship between capitalism and climate change plays out in the rural world and in particular the way agrarian struggles connect with the huge challenge of climate change Through a huge variety of case studies alongside more conceptual chapters the book makes the often missing connection between climate change and critical agrarian studies The book argues that making the connection between climate and agrarian justice is crucial The chapters in this book were originally published in The Journal of Peasant Studies The Open Access version of this book available at <https://www.taylorfrancis.com/books/oa-edit/10.4324/9781003467960/climate-change-critical-agrarian-studies> ian scoones saturnino borras jr amita baviskar marc edelman nancy lee peluso wendy wolford has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license A version of the open access title is also available on the OAPEN platform <https://library.oapen.org/handle/20.500.12657/85297> **Computer and Information Security Handbook (2-Volume Set)** John R.

transformative force on the world one comparable in significance to code itself this book highlights the importance of rhetoric in even the most seemingly a rhetorical of technical endeavors and foregrounds the crucial need for rhetorical literacy in the digital age Copyright Law Benedict Atkinson, 2017-07-05 This volume shows how since 1950 the growth of copyright regulation has followed and enabled the extraordinary economic growth of the entertainment broadcasting software and communications industries It reproduces articles written by an extensive list of leading thinkers US scholars represented in readings include James Boyle Lawrence Lessig Pamela Samuelson Mark Lemley Alfred Yen Julie Cohen Peter Jaszi and Eben Moglen Leading non US contributors include Alan Story Brian Fitzgerald and Peter Drahos These and other authors explain copyright origins the development of the law the theory of enclosure international trends recent developments and current and future directions Today the copyright system is often portrayed as an engine of growth and effective regulation as a predictor of economic development However critics see dangers in the expansion of intellectual property rights The articles in this volume focus principally on the digital age examining how copyright regulation is likely to affect goals of dissemination and access
