in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group  $g$  associated to a field extension  $l/k$  acts in a natural way on some abelian groups for example those constructed directly from  $l$  but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
