Josie Santomauro, Margaret Carter,2009-03-15 If one of your pupils has Asperger Syndrome (AS), you might have noticed that some of their behaviour is a bit different to other students: that they become stressed when faced with change in situations or routines. Children with AS are visual thinkers and learners and they do not cope well with verbal instructions. That's why, in order to avoid negative feedback, they can become defiant in their behaviour. This book offers an accessible introduction for teachers of a child diagnosed with AS. Intended as a support tool in the initial period after diagnosis, Your Special Student is varied and engaging and addresses questions or concerns that teachers might have, such as introducing an AS student to the class, integrating the AS student, dealing with tricky situations such as bullying, and encouraging the gifts of AS. Also included are poems, stories, illustrations, and activities to guide teachers in helping the child and his or her peers come to terms with and move forward from a diagnosis of AS. Weightlifting The Foot the Ankle Joint and Asian Pull Asian pull technique is in all probability an effort to circumvent gravity by finding the path of least resistance for the body's movements which means these movements need not be designed to raise body center of mass as high as possible as in the Russian pull before squatting under the barbell The Asian pull technique is antithetical to Russian protocols which stipulate the lifter remain flat footed as trunk and thighs straighten in unison during the explosion phase see figure 3 Much of the explosion phase of the Asian pull is carried out with shoulder joints behind the vertical line of the bar with heels raised as legs straighten Peculiarities of balance equilibrium and stability are not unique to weightlifting In point of fact they can even be considered normal aberrations in athletics given the extraordinary complexity of the human body's movement possibilities Furthermore the high incidence of injuries in American sport can be traced to a catastrophic outcome of strength and conditioning training therapeutics and the like where an athlete's movements are choreographed to conform to rigid arbitrarily conceived limitations especially linear Charniga 2015 2017 Five articles have appeared in the EWF Science journal with another two awaiting publication
