

Thuphri - Alien Species

Thuphri are carnivorous pack animals that live in sparsely forested regions. They are highly intelligent & social creatures that follow an Alpha/Beta ethology. Due to their high intelligence, they can form successful alliances with other species such as humans, and in rare cases can be ridden as a mount. Wild Thuphri are extremely dangerous, however if befriended, can become invaluable allies. Thuphri are their planet's apex predators, humans attempted to contest this, but failed.

When agitated, the neck hairs flare out and mandibles open for fear-factor. Otherwise, the mandibles are neatly tucked in the upward position.

There is no hair green around the head, an evolutionary feature similar to wolves.

Females seek out and consider the number of scars on a male's shoulder to determine their strength and potential as a mate. Males wear their shoulder scars (and all scars) as proudly badges.

The two large antennae on the tail help detect mating pheromones along with smell and vibrations.

Thuphri are very effective climbers. Their claws all act as climbing hooks.

Species Design:

Transpecies Design Adrian Parr Zaretsky, Michael Zaretsky, 2024-07-31 In May 2019 the United Nations released the Global Assessment Report on Biodiversity and Ecosystem Services which warned that human activities will drive nearly one million species to extinction in a few decades The primary reasons for this are habitat loss and biodiversity demise caused by changing climate pollution introducing nonindigenous species clearing land over population and consumption Given this situation humans must change course as both human wellbeing and the wellbeing of other than human species are imbricated in one another One way humanity can accomplish the needed transformation is to move beyond an anthropocentric view of life by embracing a transpecies approach that is premised upon interconnected flourishing Transpecies design as outlined in this book offers a new approach to regenerating the natural environment while honoring biodiversity Rather than presenting the human experience as the goal of design transpecies design takes the inextricable linkages connecting living things as both its starting point and end goal As such it moves beyond human experience serving as the fundamental ingredient for making better design processes and decisions This book is essential reading for artists designers and architects as well as students of architecture landscape architecture interior architecture art product design urban design planning environmental philosophy and cultural studies **Species Design by H. Giger, 1995-08-01 *Design for Inclusivity* Magda Mostafa, Ruth Baumeister, Mette Ramsgaard Thomsen, Martin Tamke, 2023-09-02 The book provides new perspectives from leading experts examining the role of architects and urbanists in designing for inclusivity in our built environment By focusing on themes of gender race and ethnicity ability neurodiversity age poverty and socio economy and the non human the book tackles the complex challenges that designers and scholars encounter and need to address in their works The volume offers a diverse compilation of peer reviewed papers related to architecture for inclusivity in various different formats ranging from visual essays argumentative papers and scholastic texts It presents the notion of availability a concept which works to challenge the othering inherent in notions of inclusion and accessibility In its introduction it presents a critical discourse around the challenges and potentials lying in the design for availability targeted towards a systemic change of our societies The book is part of a series of six volumes that explore the agency of the built environment in relation to the SDGs through new research conducted by leading researchers The series is led by editors Mette Ramsgaard Thomsen and Martin Tamke in collaboration with the theme editors Design for Climate Adaptation Billie Faircloth and Maibritt Pedersen Zari Design for Rethinking Resources Carlo Ratti and Mette Ramsgaard Thomsen Eds Design for Resilient Communities Anna Rubbo and Juan Du Eds Design for Health Arif Hasan and Christian Benimana Eds Design for Inclusivity Magda Mostafa and Ruth Baumeister Eds Design for Partnerships for Change Sandi Hilal and Merve Bedir Eds *An Introductory Philosophy of Medicine* James A. Marcum, 2008-05-07 In this book the author explores the shifting philosophical boundaries of modern medical knowledge and practice occasioned by the crisis of quality

of care especially in terms of the various humanistic adjustments to the biomedical model To that end he examines the metaphysical epistemological and ethical boundaries of these medical models He begins with their metaphysics analyzing the metaphysical positions and presuppositions and ontological commitments upon which medical knowledge and practice is founded Next he considers the epistemological issues that face these medical models particularly those driven by methodological procedures undertaken by epistemic agents to constitute medical knowledge and practice Finally he examines the axiological boundaries and the ethical implications of each model especially in terms of the physician patient relationship In a concluding Epilogue he discusses how the philosophical analysis of the humanization of modern medicine helps to address the crisis of care as well as the question of What is medicine The book s unique features include a comprehensive coverage of the various topics in the philosophy of medicine that have emerged over the past several decades and a philosophical context for embedding bioethical discussions The book s target audiences include both undergraduate and graduate students as well as healthcare professionals and professional philosophers This book is the 99th issue of the Series Philosophy and Medicine and it can be considered a crown of thirty years of intensive and dynamic discussion in the field We are completely convinced that after its publication it can be finally said that undoubtedly the philosophy of medicine exists as a special field of inquiry

PCR Primer Design Anton Yuryev, 2008-02-03 In the past decade molecular biology has been transformed from the art of cloning a single gene to a statistical science measuring and calculating properties of entire genomes New high throughput methods have been developed for genome sequencing and studying the cell at different systematic levels such as transcriptome proteome metabolome and other omes At the heart of most high throughput methods is the technique of polymerase chain reaction PCR PCR Primer Design focuses on primer design which is critical to both the efficiency and the accuracy of the PCR With intricate descriptions of basic approaches as well as specialized methods this volume is an exceptional reference for all those involved in studying the genome In PCR Primer Design authors describe basic approaches for PCR primer design in addition to specialized methods These state of the art methods can be used for both genome scale experiments and for small scale individual PCR amplifications This volume will be useful for organizations performing whole genome studies companies designing instruments that utilize PCR and individual scientists geneticists molecular biologists molecular geneticists and more who routinely use PCR in their research

In Defense of an Evolutionary Concept of Health Mahesh Ananth, 2017-11-30 One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists Naturalists

argue that although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety

, 1995 **Foundations of Mathematical Biology** Robert J. Rosen, 2013-09-03 Foundations of Mathematical Biology Volume III is devoted to the treatment of behavior of whole organisms and groups of organisms The viewpoint taken throughout the book is a holistic phenomenological one That is the integrated behavior of these organisms and groups of organisms is not in general referred back to specific structural properties of interacting subunits as in a reductionist scheme but is rather treated on its own terms without invoking the properties of lower levels of organization The book begins with an overview of organization and control in physiological systems with emphasis on the mathematical techniques involved in more detailed investigations of specific physiological mechanisms Separate chapters cover the cardiovascular system with particular reference to blood flow gross problems of organic form a relational overview of physics biology and sociology the automata theory in the context of the central nervous system and populations of interacting organisms The final chapter discusses the material presented in the entire work some of its philosophical presuppositions and implications and the possibility of constructing a unified theory of mathematical biology *Sexual Investigations* Alan Soble, 1997-09 Pornography abortion rape sexual discrimination one merely has to open the newspaper or turn on the television to be confronted with sexual issues In Sexual Investigations Alan Soble contributes to the discussion by examining the moral political and analytical dimensions of sexuality that form the foundation for these discussions In Sexual Investigations Soble takes a rigorous yet user friendly look at a number of topics in the area of human sexuality the nature of sexual activity the ethics of sexual

conduct pornography masturbation sexual health perversion date rape prostitution contraception reproduction and both the beauty and the ugliness of the sexual body What Soble asks defines healthy sexuality How firm is the distinction between rape and consensual sex How and when are sexually explicit films and photographs degrading to women This sweeping examination of the philosophical ethical and political issues surrounding human sexuality is as learned and thoughtful as it is entertaining

On the Nature of Health L.Y Nordenfelt, 2013-03-09 GENERAL INTRODUCTION This study of the concept of health is an attempt to combine central ideas in modern philosophy of medicine with certain results from analytical action theory What emerges from the study is a concept of health based on an action theoretic foundation A person's health is characterized as his ability to achieve his vital goals The general conception is not new This study has been inspired by a number of scholars both ancient and modern The most important influences from the latter have been those of Georges Canguilhem H Tristram Engelhardt Jr Caroline Whitbeck and Ingmar Persson The novel aspect of this book consists of elaborations made to the general conception First the action theoretic platform is analysed in some detail The nature of the ability involved as well as the conditions for having that ability are specified Second the vital goals of man are given considerable attention Some previous attempts to define such vital goals are analysed and criticized A new characterization is proposed in which the vital goals are conceptually linked to the notion of happiness A person's vital goals are such states of affairs as are necessary and together sufficient for his minimal happiness Third a number of consequences of this conception are observed and analysed One issue which is particularly emphasized is that of whether the concept of health is a theoretical or a normative concept

The Biopolitics of Human Enhancement James J. Hughes, Steven Umbrello, Cristiano Calì, 2025-03-03 The study of the social implications of human enhancement is an interdisciplinary work that draws from the fields of political science sociology philosophy and bioethics among others It is also a complex and rapidly evolving subject that raises important questions about the potential benefits and risks of these technologies as well as how society should govern and regulate their development and use An in depth exploration of current and future human enhancement technologies this book delves into the specifics of current and emerging human enhancement technologies such as cognitive enhancers brain computer interfaces and genetic engineering discussing the state of the art the limitations and also the technological developments that one can expect in the future and how they can be regulated and used responsibly
