Spectral Theory of Functions and Operators Nikolai Kapitonovich Nikolskii, 1983 **Spectral Theory of Functions and Operators. Generalized Functions, Operator Theory, and Dynamical Systems Ioannis Antoniou, Gunter Lumer, 2021-02-25 Nobel prize winner Ilya Prigogine writes in his preface Irreversibility is a challenge to mathematics which leads to generalized functions and to an extension of spectral analysis beyond the conventional Hilbert space theory Meeting this challenge required new mathematical formulations obstacles met and largely overcome thanks primarily to the contributors to this volume This compilation of works grew out of material presented at the Hyperfunctions Operator Theory and Dynamical Systems symposium at the International Solvay Institutes for Physics and Chemistry in 1997 The result is a coherently organized collective work that moves from general widely applicable mathematical methods to ever more specialized physical applications Presented in two sections part one describes Generalized Functions and Operator Theory part two addresses Operator Theory and Dynamical Systems The interplay between mathematics and physics is now more necessary than ever and more difficult than ever given the increasing complexity of theories and methods *Spectral Theory of Differential Operators* V.A. Il'in, 2012-12-06 In this fully illustrated textbook the author examines the spectral theory of self adjoint elliptic operators Chapters focus on the problems of convergence and summability of spectral decompositions about the fundamental functions of elliptic operators of the second order The author's work offers a novel method for estimation of the remainder term of a spectral function and its Riesz means without recourse to the traditional Carleman technique and Tauberian theorem apparatus **Operators, Semigroups, Algebras and Function Theory** Yemon Choi, Matthew Daws, Gordon Blower, 2023-12-06 This volume collects contributions from participants in the IWOTA conference held virtually at Lancaster UK originally scheduled in 2020 but postponed to August 2021 It includes both survey articles and original research papers covering some of the main themes of the meeting **Spectral Theory of Non-Self-Adjoint Two-Point Differential Operators** John Locker, 2000 Develops the spectral theory of an n th order non self adjoint two point differential operator L in the complex Hilbert space L^2_0 The differential operator L is determined by an n th order formal differential l and by n linearly independent boundary values $B_1 \dots B_n$ Locker first lays the foundations of the spectral theory for closed linear operators and Fredholm operators in Hilbert spaces before developing the spectral theory of the differential operator L The book is a sequel to Functional analysis and two point differential operators 1986 Annotation copyrighted by Book News Inc Portland OR **Recent Advances in Operator Theory in Hilbert and Krein Spaces** Jussi Behrndt, Karl-Heinz Förster, Carsten Trunk, 2010-01-11 The present book is a memorial volume devoted to Peter Jonas It displays recent advances in modern operator theory in Hilbert and Krein spaces and contains a collection of original research papers written by many

well known specialists in this field The papers contain new results for problems close to the area of research of Peter Jonas Spectral and perturbation problems for operators in inner product spaces generalized Nevanlinna functions and definitizable functions scattering theory extension theory for symmetric operators fixed points hyperbolic matrix polynomials moment problems indefinite spectral and Sturm Liouville problems and invariant subspace problems This book is written for researchers and postgraduates interested in functional analysis and differential operators

Eigenvalues and Completeness for Regular and Simply Irregular Two-Point Differential Operators John Locker, 2008 In this monograph the author develops the spectral theory for an n th order two point differential operator L in the Hilbert space L^2_0 where L is determined by an n th order formal differential operator ℓ having variable coefficients and by n linearly independent boundary values $B_1 \dots B_n$ Using the Birkhoff approximate solutions of the differential equation $\rho h \ell u = 0$ the differential operator L is classified as belonging to one of three possible classes regular simply irregular or degenerate irregular For the regular and simply irregular classes the author develops asymptotic expansions of solutions of the differential equation $\rho h \ell u = 0$ constructs the characteristic determinant and Green's function characterizes the eigenvalues and the corresponding algebraic multiplicities and ascents and shows that the generalized eigenfunctions of L are complete in L^2_0 He also gives examples of degenerate irregular differential operators illustrating some of the unusual features of this class

Trace Ideals and Their Applications Barry Simon, 2005 From a review of the first edition Beautifully written and well organized indispensable for those interested in certain areas of mathematical physics for the expert and beginner alike The author deserves to be congratulated both for his work in unifying a subject and for showing workers in the field new directions for future development Zentralblatt MATH This is a second edition of a well known book on the theory of trace ideals in the algebra of operators in a Hilbert space Because of the theory's many different applications the book was widely used and much in demand For this second edition the author has added four chapters on the closely related theory of rank one perturbations of self adjoint operators He has

also included a comprehensive index and an addendum describing some developments since the original notes were published This book continues to be a vital source of information for those interested in the theory of trace ideals and in its applications to various areas of mathematical physics **Spectral Theory and Applications** Alexandre

Girouard, 2018-11-21 This book is a collection of lecture notes and survey papers based on the minicourses given by leading experts at the 2016 CRM Summer School on Spectral Theory and Applications held from July 4-14, 2016 at Université Laval Québec City Québec Canada The papers contained in the volume cover a broad variety of topics in spectral theory starting from the fundamentals and highlighting its connections to PDEs geometry physics and numerical analysis Interpolation
