

The briefness of each example expertly incorporating the vital data and reaction conditions together with editorial notes where necessary, enables the reader to make selections according to his needs at a glance. The separate bibliography for each section is also very helpful for tracing the original papers.

A literature search for less known reactions causes frequently more difficulties and frustration when long hours of work in the library are rewarded by only a handful of informative sentences. The present book offers an up-to-date encyclopedia of selected reactions which have been widely employed in steroid chemistry. However, examples of those reactions have been selected which have not received wide attention, such as reactions at the C-5 side chain, side-chain modifications of ring positions, addition of allylic and heterocyclic rings to the steroid nucleus, etc. Any reader of this book who is familiar with steroid chemistry will find such examples which could have been easily incorporated in an additional section dealing with side-chain reactions, without exceeding the limits of this book. Inclusion of such additional sections would have made this publication even more valuable and comprehensive.

**Spectrophotometric Analysis of Drugs Including Atlas of Spectra.** By IRVING SCHWARTZ and S. R. CLARK. Springfield, Illinois, Charles C. Thomas, Springfield, Ill., 1963. vol. + 235 pp. \$10.00.

The introduction of spectrophotometric techniques for qualitative and quantitative analyses in clinical and forensic technology will be greatly assisted by the appearance of this book. A detailed experimental procedure for the preparation of samples for ultraviolet and infrared spectra determination from blood, urine, and aqueous-solvent systems should prove useful even by those previously untrained in spectrophotometric techniques. As the authors indicate, a reading of reference spectra must be kept by each analyst since the appearance of new drugs is too rapid to allow for publication of atlases of spectra. A very excellent start has been provided in this book, however, for ultraviolet absorption spectra of 143 common drugs in acidic and basic solvent are presented, along with 268 infrared spectra. In most cases spectra of the therapeutic agent as a KBr pellet and in chloroform solution are given. In all cases the spectra are easily read and are sufficiently large for each comparison with experimentally obtained curves.

For no apparent reason, the authors indicate specifically that a "Perkin-Elmer Model 221 recording infrared spectrophotometer" is necessary equipment for the infrared analyses while the fact that the ultraviolet absorption spectra were determined using a "Beckman DU2 recording ultraviolet spectrophotometer" was mentioned only on the last page. This may prove misleading to the technologist wishing to utilize these techniques, for a number of infrared spectrophotometers are available with "wide dispersion," the special feature required by this analysis.

A table beginning on page 41 lists the ultraviolet spectra in order of increasing wave length of major absorption bands. This provides a rapid method for finding the curves for comparison with the unknown. Unfortunately, the authors made no attempt to provide some similar guide for expediting the comparison of infrared spectra. A modification of the "Wadler" process might prove valuable.

The presentation of the infrared curves is excellent; however, the ultraviolet spectra were not plotted from the instrument curve and thus are not linear in wave length, providing some difficulty in determining the exact wave length of long wave length maxima. Furthermore, the curves are plotted in optical density which limits their usefulness to the classical spectroscopist.

The index indicates the generic names of all agents by presentation in all capital, but synonym names are included. It is like many indexes that one indicates the page number of the curves by both the generic and synonym names providing the reader a rapid reference to the atlas of spectra.

In spite of the few disadvantages mentioned above, this book

will prove of interest to any scientist who is concerned with infrared and/or ultraviolet absorption spectroscopy of organic compounds.

**Physiologic Pharmacology.** Volume 1. WALTER G. BLOE and FRANKLIN D. HARRISON, Eds. Appleton Press, New York, N. Y., 1963. vol. + 768 pp. 13.5 x 23.5 cm. 150c/6d (\$25.00).

This is the first volume in a proposed series of ten volumes and the first of three volumes on drugs acting predominantly on the central nervous system. Volume 1, a multi-authored work, is concerned with depressant drugs. The emphasis on "physiology" in the title and throughout for the series may be somewhat misleading in its implication. This first volume in its more "physiologic" and, in view of the definition of pharmacodynamics or pharmacology, could be no more "physiologic" than a standard pharmacology textbook, such as Goodman and Gilman.

Most multi-authored books suffer from an inconsistency in quality of presentation which can only be circumvented, to some degree, by rigid editorial policy and review. The wide range in quality of the twelve chapters of the first volume tend one to hope that the editor will exercise stricter supervision of contributions in the forthcoming volumes. The chapters on alcohol and halothane anesthesia and physical dependence are worthwhile contributions to the pharmacology literature. The material in the two chapters on general anesthesia is more extensive than that usually found in textbooks, but one could wish for greater analytical treatment. The three chapters on the tranquilizers provide a much needed, comprehensive survey of material not available in standard textbooks. However, the three chapters on the sedatives and hypnotics and the chapter on steroid analgesics are neither as comprehensive nor well presented as similar chapters in current textbooks. A critical review of the chapters on the hypnotic agents failed to detect a number of inaccuracies. The fourth of them are covered in the latter chapter, although very extensive is treated with a minimum of critical evaluation. In the reviewer's opinion this book of analytical criticism is to be regretted.

The third volume of "Physiologic Pharmacology," Vol. 17 is that on sedatives and tranquilizers, but this and several but not all reviews published related subjects. In spite of some of the shortcomings of this first volume, and the rest of the whole series, it is to be recommended for the department library rather than for personal use only.

These publications list major and minor pharmaceutical firms in the U. S. A. and Canada, 4000 firms in 15 European countries, and major and minor ones in India and Japan, with their addresses. Many, though not the majority of American listings, also contain the names of the officers of the companies, their subsidiaries, and their 1962 annual sales. Those not treated so extensively may be supposed to consist of a president, a telephone, and an office address manufacturing plant, communication. This directory certainly holds for many of the European listings. This latter set also presents short market research surveys, valuable for business leads.
