## **Speech Analysis:**

*Expression in Speech* Mark Tatham, Katherine Morton, 2003-10-16 This book is about the nature of expression in speech. It is a comprehensive exploration of how such expression is produced and understood and of how the emotional content of spoken words may be analysed, modelled, tested and synthesized. Listeners can interpret tone of voice, assess emotional pitch and effortlessly detect the finest modulations of speaker attitude, yet these processes present almost intractable difficulties to the researchers seeking to identify and understand them. In seeking to explain the production and perception of emotive content, Mark Tatham and Katherine Morton review the potential of biological and cognitive models. They examine how the features that make up the speech production and perception systems have been studied by biologists, psychologists and linguists and assess how far biological, behavioural and linguistic models generate hypotheses that provide insights into the nature of expressive speech. The authors use recent techniques in speech synthesis and automatic speech recognition as a test bed for models of expression in speech. Acknowledging that such testing presupposes a comprehensive computational model of speech production, they put forward original proposals for its foundations and show how the relevant data structures may be modelled within its framework. This pioneering book will be of central interest to researchers in linguistics and in speech science, pathology and technology. It will also be valuable for behavioural and cognitive scientists wanting to know more about this vital and elusive aspect of human behaviour.

gesture is receiving growing interest from both the academic and industrial communities. On the other hand, the consolidation of new technologies enabling disappearing computers and multimodal interfaces to be integrated into the natural environments of users are making it realistic to consider tackling the complex meaning and subtleties of human gesture in multimedia systems, enabling a deeper user-centered, enhanced physical participation and experience in the human-machine interaction process. The research programs supported by the European Commission and several national institutions and governments individuated in recent years, strictly concerned with gesture research. For example, the DG Information Society of the European Commission ([www.cordis.lu](http://www.cordis.lu)) supports several initiatives such as the Disappearing Computer and Presence EU IST FET Future and Emerging Technologies, the IST program Interfaces Enhanced Audio Visual Services (see for example the project MEGA Multisensory Expressive Gesture Applications [www.megaproject.org](http://www.megaproject.org)) and the IST strategic initiative Multimodal Interfaces. Several EC projects and other funded research are represented in the chapters of this book. A wider range of applications can benefit from advances in research on gesture from consolidated areas such as surveillance to new or emerging fields such as therapy and rehabilitation, home consumer goods, entertainment and audiovisual cultural and artistic applications, just to mention only a few of them.
