Update on Paramagnetic Sensors for Polymers and Composites Research Alexander L. Kovarski, 2013-03-18 This book presents newer applications of paramagnetic sensors for the study of polymer materials, structure, microreology, and molecular dynamics. Paramagnetic or spin sensors have found wide use in structural and dynamic research of condensed media using the spectroscopy of electron paramagnetic resonance (EPR). Stable nitroxide radicals are the most exploited paramagnetic sensors, which formed the basis of spin probes and labels, a technique well known to the experts in fields of chemical and biological materials science. With the proliferation of new materials, composites, nano-dimensional fillers, new trends in the methodology of paramagnetic sensors application have been outlined. This book is devoted to these new trends in polymers and nanocomposites research. It observes the methods of adaptation of EPR spectroscopy of paramagnetic sensors to interface layers investigation, analysis of the systems containing magnetic nanoparticles, identification of composites ingredients by EPR spectra of free radicals, detection of the shear component of polymer materials deformation. This book also presents at an accessible level the theory of EPR, the structure and properties of paramagnetic sensors, stable nitroxide radicals, and methods of basic parameters calculation from their EPR spectra. Intended for researchers and educators specialized in polymer material science and

colloid chemistry This book can also be used as a practical guide on paramagnetic resonance and paramagnetic sensors application for students and postgraduates Medical Books and Serials in Print ,1984 EPR and Advanced EPR Studies of Biological Systems Larry R. Dalton,2018-01-18 This work is written to provide a qualitative introduction appropriate for a general science audience to the application of paramagnetic resonance to the determination of biomolecular dynamics The work is also intended as a reference resource for those pursuing or contemplating research in the hydrodynamics The work is also intended as a reference resource for those pursuing or contemplating research in the hydrodynamic characterization of components of Biosystems Thus the Introduction Theory and Methodology sections involve presentations at two levels a pictorial and intuitive presentation for the generalist and a quantitative presentation for the specialist The sections on applications provide a critical discussion of both pure and applied research applications which yields insights into both the capabilities and limitations of the methodology The applications sections are also of interest from the standpoint of the detailed characterization of certain Biosystems such as erythrocytes which have evolved from EPR measurements
