Principles of Worsted Spinning Howard Priestman, 1921 **Textile World Journal**, 1919 *Woollen Spinning, Weaving, Knitting, Dyeing, Bleaching and Printing Technology Handbook* NPCS Board of Consultants & Engineers, 2009-10-01 Spinning is a major industry it is part of the textile manufacturing process where three types of fibre are converted into yarn then fabric then textiles The textiles are then fabricated into clothes or other artifacts The fundamental operations for the stocks of fibers from which a woollen yarn is made are opening cleaning mixing forming a slubbing or roving and finally thinning the roving to the required yarn number and twisting it to produce a yarn possessing the requirements for subsequent processing such as warping winding weaving finishing and dyeing These demands vary with the different conditions confronted in manufacturing but include the following features strength elasticity uniformity in weight per unit length and even distribution of twist Woollen spinning involves three principal operations irrespective of whether the mule or the frame or ring spinner is used namely Drafting final drawing out Twisting or insertion of twist Winding on or packaging Weaving constitutes the actual production of cloth or fabric i e to combine the essentially one dimensional textile structure thread or yarn in such a way as to result in an essentially two dimensional structure of cloth of certain appearance hand and strength Knitting is the art and science of constructing a fabric by inter lacing loops there are two types of knitting warp and weft knitting In recent years whole new classes of dyes such as fiber reactive disperse cationic basic neutral dying premetalized have been discovered and produced for the dyeing of the natural and new synthetic hydrophobic fibers Bleaching improves whiteness by removing natural coloration and remaining trace impurities from the cotton the degree of bleaching necessary is determined by the required whiteness and absorbency Cotton being a vegetable fibre will be bleached using an oxidizing agent such as dilute sodium hypochlorite or dilute hydrogen peroxide If the fabric is

to be dyed a deep shade then lower levels of bleaching are acceptable for example However for white bed sheetings and medical applications the highest levels of whiteness and absorbency are essential Wool fiber production technology necessitates full understanding of its growth pristine structure physical chemical and functional properties as well as processes involving manufacture of textile fibers Some of the fundamentals of the book are woollen spinning atmospheric conditions in wool manufacturing Bradford system top gilling or top finishing the principle of weaving woollen and worsted weaves knitting the changing outlook of the knitting industry influence of fiber fineness on quantity of dye required altering the affinity of the wool fiber for dyes dyeing of yarn according to the packing system special wool finishes water repellent stain resistant treatments for worsted and woollen fabrics the printing of wool piece goods lustering of wool fabrics fluorochemicals mothproofing etc The present book is of its own kind which covers woollen spinning knitting dyeing bleaching and printing special wool finishes etc This is an important reference book for wool technologists scientists new entrepreneurs research scholars and all others related to this field TAGS Mule Spinning Spinning Woollen Woollen Spinning Plants How to Weave Woollen Beginner s Guide to Woollen Weaving How to Start Woollen Weaving Business Weaving for Beginners Woollen Dyeing for Beginners Beginner s Guide to Woollen Dyeing Wool Dyeing Process Methods of Dyeing Woollen Process of Dyeing Woollen Wool Dyeing Techniques Wool Bleaching Bleaching Process of Wool Bleaching Method for Woollen Wool Dyeing and Bleaching Woollen Yarns Bleaching Wool Bleaching of Wool Process of Bleaching Woollen Wool Bleaching Machine Printing of Wool Woollen Printing Dyeing and Printing Woollen Woollen Spinning Weaving Knitting Dyeing Bleaching Bleaching and Printing of Wool Methods of Describing Weaves Stitch Formation Mule Production Production of Mule Manufacturing Mule Woollen Spinning Process Woollen Dyeing Woollen Spinning Wool Spinning Process Wool Spinning Machine Woollen Spinning Weaving Worsteds Topmaking Industry Worsteds Topmaking Production of Noble Comb Woollen and Worsteds Weaves Construction in Commercial Fabrics Dyeing Bleaching and Printing Low Temperature Dyeing Irga Solvent Process Collins Process C S T R O Process Ultrasonic Dyeing Pad Dyeing Methods Cibaphasol Technique Irga Pad Process C S I R O Methods Construction of Dyeing Machines Loose Stock Dyeing Machinery Top or Slubbing Dyeing Machinery Pot or Can Dyeing Machinery Special Wool Finishes Lustering of Wool Fabrics Luster on Pile Fabrics Inducing Yarn Crimp During Weaving Chromium Compounds Fluorochemicals Mothproofing Acid Dyes Basic Dyes Direct Dyes Woollen Ring Frame Spinning Wool Blends with Man Made Fibers Punch or Ball Winding Strerch Breaking Methods Pirnless Weaving Plain Rib and Purl Stitches Tuck and Miss Stitch Fabrics Stripping Dyed Wool Machine and Spinning Oils Wool Dyeing Machinery Piece Dyeing Machinery Potassium Permanganate Bleach Parts of Noble Comb Pointed and Herringbone Twills Broken or Reversed Twills Corkscrew Twills Inter Locking and Offset Twills Modern Dyestuffs Lime in Pulled Wools Beam Dyeing Vigoureux or Melange Printing Anti Yellowing Treatment Finishing Helanca Ski Cloth Npcs Niir Process Technology Books Business Consultancy Business Consultant Project Identification and Selection Preparation of Project
