Specification Analysis in the Linear Model Maxwell L. King, David E. A. Giles, 2018-03-05 Originally published in 1987 This collection of original papers deals with various issues of specification in the context of the linear statistical model The volume honours the early econometric work of Donald Cochrane late Dean of Economics and Politics at Monash University in Australia The chapters focus on problems associated with autocorrelation of the error term in the linear regression model and include appraisals of early work on this topic by Cochrane and Orcutt The book includes an extensive survey of autocorrelation tests some exact finite sample tests and some issues in preliminary test estimation A wide range of other specification issues is discussed including the implications of random regressors for Bayesian prediction modelling with joint conditional probability functions and results from duality theory There is a major survey chapter dealing with specification tests for non nested models and some of the applications discussed by the contributors deal with the British National Accounts and with Australian financial and housing markets

Econometric Analysis of Model Selection and Model Testing M. Ishaq Bhatti, Hatem Al-Shanfari, 2017-03-02 In recent years econometricians have examined the problems of diagnostic testing specification testing semiparametric estimation and model selection In addition researchers have considered whether to use model testing and model selection procedures to decide the models that best fit a particular dataset This book explores both issues with application to various regression models including the arbitrage pricing theory models It is ideal as a reference for statistical sciences postgraduate students academic researchers and policy makers in understanding the current status of model building and testing techniques

Specification, Estimation, and Analysis of Macroeconometric Models Ray C. Fair, 1984 This book gives a practical applications oriented account of the latest techniques for estimating and analyzing large nonlinear macroeconomic models Ray Fair demonstrates the application of these techniques in a detailed presentation of several actual models including his

United States model his multicountry model Sargent's classical macroeconomic model autoregressive and vector autoregressive models and a small twelve equation linear structural model He devotes a good deal of attention to the difficult and often neglected problem of moving from theoretical to econometric models In addition he provides an extensive discussion of optimal control techniques and methods for estimating and analyzing rational expectations models A computer program that handles all the techniques in the book is available from the author making it possible to use the techniques with little additional programming The book presents the logic of this program A smaller program for personal microcomputers for analysis of Fair's United States model is available from Urban Systems Research Engineering Inc Anyone wanting to learn how to use large macroeconomic models including researchers graduate students economic forecasters and people in business and government both in the United States and abroad will find this an essential guidebook

Spatial Econometrics:

Methods and Models L. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e.g. most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other

inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis

Statistical Parametric Mapping: The Analysis of Functional Brain Images William D. Penny, Karl J. Friston, John T. Ashburner, Stefan J. Kiebel, Thomas E. Nichols, 2011-04-28 In an age where the amount of data collected from brain imaging is increasing constantly it is of critical importance to analyse those data within an accepted framework to ensure proper integration and comparison of the information collected This book describes the ideas and procedures that underlie the analysis of signals produced by the brain The aim is to understand how the brain works in terms of its functional architecture and dynamics This book provides the background and methodology for the analysis of all types of brain imaging data from functional magnetic resonance imaging to magnetoencephalography Critically Statistical Parametric Mapping provides a widely accepted conceptual framework which allows treatment of all these different modalities This rests on an understanding of the brain's functional anatomy and the way that measured signals are caused experimentally The book takes the reader from the basic concepts underlying the analysis of neuroimaging data to cutting edge approaches that would be difficult to find in any other source Critically the material is presented in an incremental way so that the reader can understand the precedents for each new development This book will be particularly useful to neuroscientists engaged in any form of brain mapping who have to contend with the real world problems of data analysis and understanding the techniques they are using It is primarily a scientific treatment and a didactic introduction to the analysis of brain imaging data It can be used as both a textbook for students and scientists starting to use the techniques as well as a reference for practicing neuroscientists The book also serves as a companion to the software packages that have been developed for brain imaging data analysis An essential reference and companion for users of the SPM software Provides a complete description of the concepts and procedures entailed by the analysis of brain images Offers full didactic treatment of the basic mathematics behind the analysis of brain imaging data Stands as a compendium of all the advances in neuroimaging data analysis over the past decade Adopts an easy to understand and incremental approach that takes the reader from basic statistics to state of the art approaches such as Variational Bayes Structured treatment of data analysis issues that links different modalities and models Includes a series of appendices and tutorial style chapters that makes even the most sophisticated approaches accessible

Linear Models and Time-Series Analysis Marc S. Paolella, 2018-10-10 A comprehensive and timely edition on an emerging new trend in time series Linear Models and Time Series Analysis Regression ANOVA ARMA and GARCH sets a strong foundation in terms of distribution theory for the linear model regression and ANOVA univariate time series analysis ARMAX and GARCH and some multivariate models associated primarily with modeling financial asset returns copula based structures and the discrete mixed normal and Laplace It builds on the author's previous book Fundamental Statistical Inference A Computational Approach which introduced the major concepts of statistical inference Attention is explicitly paid

Market Response Models: Econometric and Time Series Analysis Dominique M. Hanssens, Leonard J. Parsons, Randall L. Schultz, 2012-12-06 This book reports over a decade's worth of research on the development of empirical response models that have important uses for generating marketing knowledge and improving marketing decisions Some of its contributions to marketing are the following 1 It integrates state of the art technical material with discussions of its relevance to management 2 It provides continuity to a research stream over 20 years old 3 It illustrates how marketing generalizations are the basis of marketing theory and marketing knowledge 4 It shows how the research can be applied to marketing planning and forecasting 5 It presents original research in marketing The book addresses both marketing researchers and marketing managers This can be done because empirical decision models are helpful in practice and are also based on theories of response Econometric and time

series analysis ETS is one of the few areas in marketing where there is little if any conflict between the academic sphere and the world of professional practice Market Response Models is a sequel to Marketing Models and Econometric Research published in 1976 It is rare for a research oriented book in market ing to be updated or to have a sequel Unlike many other methodologies ETS research in marketing has stood the test of time It remains the main method for discovering relations among marketing variables

Westfall, Andrea L. Arias, 2020-06-25

Understanding Regression Analysis unifies diverse regression applications including the classical model ANOVA models generalized models including Poisson Negative binomial logistic and survival neural networks and decision trees under a common umbrella namely the conditional distribution model It explains why the conditional distribution model is the correct model and it also explains proves why the assumptions of the classical regression model are wrong Unlike other regression books this one from the outset takes a realistic approach that all models are just approximations Hence the emphasis is to model Nature's processes realistically rather than to assume incorrectly that Nature works in particular constrained ways Key features of the book include Numerous worked examples using the R software Key points and self study questions displayed just in time within chapters Simple mathematical explanations baby proofs of key concepts Clear explanations and

applications of statistical significance p values incorporating the American Statistical Association guidelines Use of data generating process terminology rather than population Random X framework is assumed throughout the fixed X case is presented as a special case of the random X case Clear explanations of probabilistic modelling including likelihood based methods Use of simulations throughout to explain concepts and to perform data analyses This book has a strong orientation towards science in general as well as chapter review and self study questions so it can be used as a textbook for research oriented students in the social biological and medical and physical and engineering sciences As well its mathematical emphasis makes it ideal for a text in mathematics and statistics courses With its numerous worked examples it is also ideally suited to be a reference book for all scientists
