Computational Fluid Dynamics Review 2010 M. M. Hafez,K?ichi ?shima,Dochan Kwak,2010 This volume contains 25 review articles by experts which provide up to date information about the recent progress in computational fluid dynamics CFD Due to the multidisciplinary nature of CFD it is difficult to keep up with all the important developments in related areas CFD Review 2010 would therefore be useful to researchers by covering the state of the art in this fast developing field

Adaptive High-order Methods in Computational Fluid Dynamics Z. J. Wang,2011 This book consists of important contributions by world renowned experts on adaptive high order methods in computational fluid dynamics CFD It covers several widely used and still intensively researched methods including the discontinuous Galerkin residual distribution finite volume differential quadrature spectral volume spectral difference PNPM and correction procedure via reconstruction methods The main focus is applications in aerospace engineering but the book should also be useful in many other engineering disciplines including mechanical chemical and electrical engineering Since many of these methods are still evolving the book will be an excellent reference for researchers and graduate students to gain an understanding of the state of the art and remaining challenges in high order CFD methods

Spectral Methods Jie Shen,Tao Tang,Li-Lian Wang,2011-08-25 Along with finite differences and finite elements spectral methods are one of the three main methodologies for solving partial differential equations on computers

This book provides a detailed presentation of basic spectral algorithms as well as a systematical presentation of basic convergence theory and error analysis for spectral methods. Readers of this book will be exposed to a unified framework for designing and analyzing spectral algorithms for a variety of problems including in particular high order differential equations and problems in unbounded domains. The book contains a large number of figures which are designed to illustrate various concepts stressed in the book. A set of basic matlab codes has been made available online to help the readers to develop their own spectral codes for their specific applications. Advanced Finite Element Methods and Applications Thomas Apel, Olaf Steinbach, 2012-07-16 This volume on some recent aspects of finite element methods and their applications is dedicated to Ulrich Langer and Arnd Meyer on the occasion of their 60th birthdays in 2012. Their work combines the numerical analysis of finite element algorithms, their efficient implementation on state of the art hardware architectures and the collaboration with engineers and practitioners. In this spirit, this volume contains contributions of former students and collaborators indicating the broad range of their interests in the theory and application of finite element methods. Topics cover the analysis of domain decomposition and multilevel methods including hp finite elements, hybrid discontinuous Galerkin methods and the coupling of finite and boundary element methods, the efficient solution of eigenvalue problems related to partial differential equations with applications in electrical engineering and optics and the solution of direct and inverse field problems in solid mechanics.

Exploring Mathematical Analysis, Approximation Theory, and Optimization Nicholas J. Daras, Michael Th.

Rassias, Nikolaos B. Zographopoulos, 2024-01-04 This book compiles research and surveys devoted to the areas of mathematical analysis, approximation theory and optimization. Being dedicated to A. M. Legendre's work, contributions to this volume are devoted to those branches of mathematics and its applications that have been influenced directly or indirectly by the mathematician. Additional contributions provide a historical background as it relates to Legendre's work and its association to the foundation of Greece's higher education. Topics covered in this book include the investigation of the Jensen-Steffensen inequality, Ostrowski and trapezoid type inequalities, a Hilbert Type Inequality, Hardy's inequality, dynamic unilateral contact problems, square free values of a category of integers, a maximum principle for general nonlinear operators, the application of Ergodic Theory to an alternating series expansion for real numbers, bounds for similarity condition numbers of unbounded operators, finite element methods with higher order polynomials, generating functions for the Fubini type polynomials, local asymptotics for orthonormal polynomials, trends in geometric function theory, quasi-variational inclusions, Kleene fixed point theorems, ergodic states, spontaneous symmetry breaking and quasi-averages. It is hoped that this book will be of interest to a wide spectrum of readers from several areas of pure and applied sciences and will be useful to undergraduate students, graduate level students and researchers who want to be kept up to date on the results and theories in the subjects covered in this volume.
