**Speech Perception By Ear and Eye** Dominic W. Massaro, Jeffrey A. Simpson, 2014-02-25 First published in 1987 This book is about the processing of information The central domain of interest is face to face communication in which the speaker makes available both audible and visible characteristics to the perceiver Articulation by the speaker creates changes in atmospheric pressure for hearing and provides tongue lip jaw and facial movements for seeing These characteristics must be processed by the perceiver to recover the message conveyed by the speaker The speaker and perceiver must share a language to make communication possible some internal representation is necessarily functional for the perceiver to recover the message of the speaker The current study integrates information processing and psychophysical approaches in the analysis of speech perception by ear and eye

**Speech Perception by Ear and Eye: a Paradigm for Psychological Inquiry** Dominic William Massaro, 1987 , **Speechreading by Humans and Machines** David G. Stork, Marcus E. Hennecke, 2013-11-11 This book is one outcome of the NATO Advanced Studies Institute ASI Workshop Speechreading by Man and Machine held at the Chateau de Bonas Castera Verduzan near Auch France from August 28 to September 8 1995 the first interdisciplinary meeting devoted the subject of speechreading lipreading The forty five attendees from twelve countries covered the gamut of speechreading research from brain scans of humans processing bi modal stimuli to psychophysical experiments and illusions to statistics of comprehension by the normal and deaf communities to models of human perception to computer vision and learning algorithms and hardware for automated speechreading machines The first week focussed on speechreading by humans the second week by machines a general organization that is preserved in this volume After the inevitable difficulties in clarifying language and terminology across disciplines as diverse as human neurophysiology audiology psychology electrical engineering mathematics and computer science the participants engaged in lively discussion and debate We think it is fair to say that there was an atmosphere of excitement and optimism for a field that is both fascinating and potentially lucrative Of the many general results that can be taken from the workshop two of the key ones are these The ways in which humans employ visual image for speech recognition are manifold and complex and depend upon the talker perceiver pair severity and age of onset of any hearing loss whether the topic of conversation is known or unknown the level of noise and so forth

phonetic description both improvements in instrumentation and refinements in impressionistic transcription leading to an increase in our understanding of the speech production process both in normal and atypical speakers      **The Handbook of Multisensory Processes** Gemma Calvert, Charles Spence, Barry E. Stein, 2004 Research is suggesting that rather than our senses being independent perception is fundamentally a multisensory experience This handbook reviews the evidence and explores the theory of broad underlying principles that govern sensory interactions regardless of the specific senses involved

Localist Connectionist Approaches To Human Cognition Jonathan Grainger, Arthur M. Jacobs, Arthur Jacobs, 2013-06-17 This volume provides an overview of a relatively neglected branch of connectionism known as localist connectionism The singling out of localist connectionism is motivated by the fact that some critical modeling strategies have been more readily applied in the development and testing of localist as opposed to distributed connectionist models models using distributed hidden unit representations and trained with a particular learning algorithm typically back propagation One major theme emerging from this book is that localist connectionism currently provides an interesting means of evolving from verbal boxological models of human cognition to computer implemented algorithmic models The other central messages conveyed are that the highly delicate issue of model testing evaluation and selection must be taken seriously and that model builders of the localist connectionist family have already shown exemplary steps in this direction      *Phonetics, Phonology, and Cognition* Jacques Durand, Bernard Laks, 2002 This volume demonstrates that phonology is a subsystem of the mind brain and explores the theoretical and practical including medical consequences of this insight Written by American and European specialists at the cutting edge of research in areas ranging from phonetics to neurology the book addresses central questions relating to the cognitive status of phonological representation and phonetic implementation and the links between mental and physical representation of sound systems      **Relating Theory and Data** William E. Hockley, Stephan Lewandowsky, 2014-01-02 This festschrift represents the proceedings of a conference held in honor of Bennet B Murdock one of the foremost researchers and theoreticians on human memory and cognition A highly renowned investigator respected for both his empirical and theoretical contributions to the field Murdock summarized and focused a large amount of research activity with his 1974 book Human Memory Theory and Data This unique collection of articles addresses many of the issues discussed in his classic text Divided into five principal sections its coverage includes theoretical perspectives on human memory ranging from a biological view to an exposition of the value of formal models recent progress in the study of processes in immediate memory and recognition memory and new developments in componential and distributed approaches to the modeling of human memory Each section concludes with an integrative commentary provided by some of Murdock's eminent colleagues from the University of Toronto Thus this book offers a diversity of perspectives on contemporary topics in the discipline and will be of interest to students and scholars in all branches of cognitive science      Origins Karl H. Pribram, 1994 First Published in 1994 Routledge is an imprint of Taylor Francis an informa company      **Voicing in Dutch**

Jeroen van de Weijer, Erik Jan van der Torre, 2007-10-26 This volume focuses on the phonology phonetics and psycholinguistics of voicing related phenomena in Dutch Dutch phonology has played a touchstone role in the past few decades where competing phonological theories regarding laryngeal representation have been concerned Debates have focused on the phonetic facts Is final neutralization complete or incomplete Are the assimilation rules phonetic or phonological and the most adequate phonological analyses Is voice a binary feature What constraints are necessary What is the best way of implementing the role of morphology This volume summarises and adds fuel to these debates on several fronts by providing an overview of analyses so far rule based as well as constraint based and proposing a new one by drawing attention to new facts such as exceptions to final devoicing in certain dialects and the behaviour of loanwords and by re examining the phonetic state of affairs and the behaviour of voiced voiceless and partially devoiced segments in psycholinguistic experiments

**Visual Processes in Reading and Reading Disabilities** Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership

**Mechanistic Relationships Between Development and Learning** Thomas J. Carew,R. Menzel,C. J. Shatz,1998-06-29 At the turn of the century the pioneering neuroscientist Ramon y Cajal articulated the hypothesis that growth processes involved in the development of the central nervous system may persist into adulthood where they might be retained to mediate the formation and maintenance of memory Over the decades since Cajal s seminal suggestion extensive experimental attention has been directed at elucidating the cellular and molecular mechanisms underlying both neuronal development and learning and memory Many exciting technical and conceptual

advances have been made on each front Thus as we approach the end of this century the field is now poised to assess the status of Cajal s provocative hypothesis directly This volume reflects a highly interdisciplinary dialog among experts in the fields of development and learning and memory who came together not only to assess the validity of the general hypotheses that development and learning might share mechanistic features but also to identify issues preparations and paradigms that would allow for a rigorous evaluation of ways to advance the hypothesis on the one hand and determine its fundamental limitations on the other Towards this end the volume is organized into four levels of analysis behavioral systems cellular and molecular At each level neuroscientists from the general fields of development and learning engage in lively exchange of ideas which serve to highlight the similarities and differences of both the concepts and the experimental approaches used in their diverse fields The result of this endeavor is a collection of seminal chapters and summary reports that provide a novel synthesis of important advances in two exciting areas of modern neuroscience Goal of this Dahlem Workshop to evaluate the validity of the general thesis that mechanisms utilized in the development of the nervous system are reutilized in the adult to mediate formation and maintenance of memory
