

Module 1: Fundamentals of Speech Communication

Various communication studies claim that we spend 70-80% of our waking hours communicating with others. Within this time, we also listen more (45%) than we speak (30%).

One of the most important changes in human consciousness in the last century has been the exponential growth of the means and forms of communication. Technology has made communication across geographical divides and time constraints possible — with digital means superseding many forms of face-to-face interactions. We realize that with the expanding range of communication channels available comes the need for a more critical view of what communication is and its role in human society and its development.

Definition, elements, and levels

Communication is defined as “a transactional process in which people generate meaning through the exchange of verbal and nonverbal messages in specific contexts, influenced by individual and societal forces and embedded in culture” (Alberts, Nakayama, & Martin, 2012, p. 9).

Based on this definition, communication involves the following components: message creation, meaning creation, setting, participants (individual experiences, hierarchies in relationships, culture), channels, noise, feedback, and contexts.

You may find yourself communicating in the following levels, perhaps, one or two more frequently than the others — intrapersonal, interpersonal (dyad and small group), organizational, and public. Adding to the list is technology-mediated and new media communication, which even the non-tech savvy people are forced to engage in, now that we are all learning and working from home.

Process, principles

Communication may be linear (one-way) which focuses on the transmission of the message from source to receiver, without any feedback. It may be transactional (two-way), wherein “(1) each communicator is a sender and receiver at the same time, (2)

Northern Illinois University,1968 **Wireless Communications Fundamental & Advanced Concepts** Sanjay
Kumar,2015-03-31 Wireless communication is one of the fastest growing fields in the engineering world today Rapid growth
in the domain of wireless communication systems services and application has drastically changed the way we live work and
communicate Wireless communication offers a broad and dynamic technological field which has stimulated incredible
excitements and technological advancements over last few decades The expectations from wireless communication
technology are increasing every day This is placing enormous challenges to wireless system designers Moreover this has
created an ever increasing demand for conceptually strong and well versed communication engineers who understand the
wireless technology and its future possibilities In recent years significant progress in wireless communication system design
has taken place which will continue in future Especially for last two decades the research contributions in wireless
communication system design have resulted in several new concepts and inventions at remarkable speed A text book is
indeed required to offer familiarity with such developments and underlying concepts to be taught in the classroom to future
engineers This is one of the motivations for writing this book Practically no book can be up to date in this field due to the fast
ongoing research and developments The new developments are announced almost every day Teaching directly from the
research papers in the classroom cannot build the necessary foundation Therefore need for a textbook is unavoidable which
is integral to learning and is an essential source to build the concept The prime goal of this book is to cooperate in the
learning process This book is based on current research as well as classical text books in the field and aims to provide in
depth understanding on fundamental concepts which form the basis of wireless communication and build the platform on
which current developments can be understood and future contributions can be made This book is written in self explanatory
manner to facilitate critical thinking and to support self study Special emphasis has been given in this book to systematically
organize and present the wide domain of wireless communication technology Extra care has been taken to present the

contents and the concepts in user friendly way to enable an easy understanding Therefore the language of this book is made to make one feel listening to a classroom lecture This makes learning straight forward Sometimes the explanation could seem to be oversimplified this is in order to support wide spectrum of readers as well as to clarify the hazy picture A book of this kind which addresses a fast developing technology the frequent use of acronyms and abbreviations is almost inevitable A care has been taken to spell the acronyms and abbreviations as frequently as practically suitable in the text Besides a list of acronyms and abbreviations has also been provided
