ABSTRACT

Introduction: Besides good physical condition, soccer players should also possess good technical and psychological abilities. Physical fitness is a crucial factor in the competitive ability improvement of soccer players. **Objective:** Explore the improvement of running speed and explosive strength in soccer players. **Methods:** We selected 30 soccer players by random sampling. Individuals were randomly divided into experimental and control groups. Members of both groups participated in daily physical activities, and speed and strength training was added to the experimental group through a protocol with regular exercises. The athletes trained for ten weeks. The speed and explosiveness of the athletes were measured before and after the test. A mathematical and statistical analysis was made of the data collected. **Results:** There were significant differences in running speed and explosiveness strength in the athletes of the experimental group compared to the control group in the 30-meter dash, long jump, and Illinois run. **Conclusion:** Speed and strength exercises can significantly improve the running speed of athletes, and increase the muscular explosive force and physical agility of soccer players. The speed and strength exercises developed in this paper are consistent with the technical characteristics of soccer. These results can lay the foundation for future daily training planning and project work in soccer teams. **Level of evidence II; Therapeutic studies - investigation of treatment outcomes.**
