Early Reading Instruction Diane McGuinness, 2006-01-20 Early Reading Instruction is a comprehensive analysis of the research evidence from early writing systems to computer models of reading In this book Diane McGuinness provides an innovative solution to the reading war the century old debate over the efficacy of phonics sound based versus whole word meaning based methods She has developed a prototype a set of elements that are critical to the success of a reading method McGuinness shows that all writing systems without exception are based on a sound unit in the language This fact and other findings by paleographers provides a platform for the prototype Other elements of the prototype are based on modern research For example observational studies in the classroom show that time spent on three activities strongly predicts reading success learning phoneme symbol correspondences practice at blending and segmenting phonemes in words and copying writing words phrases and sentences Most so called literacy activities have no effect and some like sight word memorization have a strongly negative effect The National Reading Panel 2000 summarized the research on reading methods after screening out thousands of studies that failed to meet minimum scientific standards In an in depth analysis of this evidence McGuinness shows that the most successful methods children reading a year or more above age norms include all the elements in the prototype Finally she argues because phonics type methods are consistently shown to be superior to whole word methods in studies dating back to the 1960s it makes no sense to continue this line of research The most urgent question for future research is how to get the most effective phonics programs into the classroom

Reading Development in Chinese Children Catherine McBride-Chang, Hsuan-Chih Chen, 2003-12-30 This text reviews both similarities and unique cultural linguistic and script differences of Chinese relative to alphabetic reading and even across Chinese regions Chinese reading acquisition relies upon children's strongly developing analytic skills as highlighted here These 16 chapters present state of the art research on diverse aspects of Chinese children's reading development This edited volume presents research on Chinese children's reading development across Chinese societies Authors from China Hong Kong Singapore and Taiwan among others present the latest findings on how Chinese children learn to read Reading acquisition in Chinese involves some parameters typically not encountered in some other orthographies such as English For example Chinese readers in different regions might speak different mutually unintelligible languages be taught to read with or without the aid of a phonetic coding system and learn different scripts This book both implicitly and explicitly considers these and other contextual issues in relation to developmental and cognitive factors involved in Chinese literacy acquisition One of the clearest themes to emerge

from this volume is that across regions Chinese children despite lack of explicit teaching of phonetic or semantic character components learn to read largely by integrating visible print sound and print meaning connections Rather than learning to read Chinese characters by rote as is sometimes mistakenly believed these children are analytic learners Chapters in this book also cover such topics as Chinese children s reading comprehension cognitive characteristics of good and poor readers and reading strategies of bilingual and biscriptal readers This book is a useful reference for anyone interested in understanding either developing or skilled reading of Chinese or for those interested in literacy learning across cultures
