Spinning the Semantic Web Dieter Fensel, 2003 A guide to the Semantic Web which will transform the Web into a structured network of resources organized by meaning and relationships **Spinning the Semantic Web** , 2005

Semantic Web for the Working Ontologist Dean Allemang, James Hendler, 2011-07-05 Semantic Web for the Working Ontologist Effective Modeling in RDFS and OWL Second Edition discusses the capabilities of Semantic Web modeling languages such as RDFS Resource Description Framework Schema and OWL Web Ontology Language Organized into 16 chapters the book provides examples to illustrate the use of Semantic Web technologies in solving common modeling problems It uses the life and works of William Shakespeare to demonstrate some of the most basic capabilities of the Semantic Web The book first provides an overview of the Semantic Web and aspects of the Web It then discusses semantic modeling and how it can support the development from chaotic information gathering to one characterized by information sharing cooperation and collaboration It also explains the use of RDF to implement the Semantic Web by allowing information to be distributed over the Web along with the use of SPARQL to access RDF data Moreover the reader is introduced to components that make up a Semantic Web deployment and how they fit together the concept of inferencing in the Semantic Web and how RDFS differs from other schema languages Finally the book considers the use of SKOS Simple Knowledge Organization System to manage vocabularies by taking advantage of the inferencing structure of RDFS Plus This book is intended for the working ontologist who is trying to create a domain model on the Semantic Web Updated with the latest developments and advances in Semantic Web technologies for organizing querying and processing information including SPARQL RDF and RDFS OWL 2.0 and SKOS Detailed information on the ontologies used in today's key web applications including ecommerce social networking data mining using government data and more Even more illustrative examples and case studies that demonstrate what semantic technologies are and how they work together to solve real world problems Visualizing the Semantic Web Vladimir Geroimenko, Chaomei Chen, 2006-07-01 The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of that vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers enough information to handle such data On the future Web many additional layers will be required if we want computer programs to handle the semantics the meaning of data properly without human intervention Such layers should deal with the hierarchical relationships between meanings their similarities and differences logical rules for making new inferences from the existing data and metadata and so on Dozens of new technologies have emerged recently to implement these ideas XML eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework OWL Web Ontology Language and many other technologies help to erect a multistory building of the Semantic Web layer by layer by

adding new features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data **A Framework for Web Science** Tim

Visualizing Information Using SVG and X3D Vladimir Geroimenko, Chaomei Chen, 2005-11-19 Correcting the Great Mistake People often mistake one thing for another That's human nature However one would expect the leaders in a particular field of endeavour to have superior abilities to discriminate among the developments within that field That is why it is so perplexing that the technology elite supposedly savvy folk such as software developers marketers and businessmen have continually mistaken Web based graphics for something it is not The first great graphics technology for the Web VRML has been mistaken for something else since its inception Viewed variously as a game system a format for architectural walkthroughs a platform for multi user chat and an augmentation of reality VRML may qualify as the least understood invention in the history of information technology Perhaps it is so because when VRML was originally introduced it was touted as a tool for putting the shopping malls of the world online at once prosaic and horrifyingly mundane to those of us who were developing it Perhaps those first two initials VR created expectations of sprawling photorealistic fantasy landscapes for exploration and play across the Web Or perhaps the magnitude of the invention was simply too great to be understood at the time by the many ironically even by those spending the money to underwrite its development Regardless of the reasons VRML suffered in the mainstream as it was twisted to meet unintended ends and stretched far beyond its limitations
