The book takes an interdisciplinary approach, discussing astrobiology, chemical evolution, and how the Universe accommodates life, molecular biology, and philosophy. It is an open-minded approach, fully referenced throughout, and each chapter includes a further reading section for anyone wishing to learn more about that perspective on the origins of life. First, everything started with the Big Bang from nothing. It appears now that everything was aiming toward our existence some 13.75 billion years later, being capable of understanding it all. We did it using powerful tools: science, philosophy, and religion. Although we appreciate the contributions made by philosophy and religion, our contemplations and doubts are based on the plentiful scientific evidence provided. The reader will be guided from the makeup of the life stage, Universe tools, and materials needed for the living matter to be formed in the small part of the Universe which one could call Human Neighborhood or the Local Universe. It contains galaxies, galaxy clusters, and voids, and the Milky Way and its satellites influencing each other during this time span. The book is easy to read, accompanied by numerous references; it could be of use to the expert in the field as well as for curious minds with a scientific, philosophical, or religious background.
