Echo and Narcissus Amy Lawrence, 1991-07-23 Do women in classical Hollywood cinema ever truly speak for themselves In *Echo and Narcissus* Amy Lawrence examines eight classic films to show how women's speech is repeatedly constructed as a problem an affront to male authority This book expands feminist studies of the representation of women in film enabling us to see individual films in new ways and to ask new questions of other films Using *Sadie Thompson* 1928 *Blackmail* 1929 *Rain* 1932 *The Spiral Staircase* 1937 *Sorry Wrong Number* 1948 *Notorious* 1946 *Sunset Boulevard* 1950 and *To Kill a Mockingbird* 1962 Lawrence illustrates how women's voices are positioned within narratives that require their submission to patriarchal roles and how their attempts to speak provoke increasingly severe repression She also shows how women's natural ability to speak is interrupted made difficult or conditioned to a suffocating degree by sound technology itself Telephones phonographs voice overs and dubbing are foregrounded called upon to silence women and to restore the primacy of the image Unlike the usage of voice by feminist and literary critics to discuss broad issues of authorship and point of view in film studies the physical voice itself is a primary focus *Echo and Narcissus* shows how assumptions about the deficiencies of women's voices and speech are embedded in sound's history technology uses and marketing Moreover the construction of the woman's voice is inserted into the ideologically loaded cinematic and narrative conventions governing the representation of women in Hollywood film

The Architecture of Rome Ulrich Füst, 1998 Architects and artists have always acknowledged over the centuries that Rome is rightly called the eternal city Rome is eternal above all because it was always

young always in its prime Here the buildings that defined the West appeared over more than 2000 years here the history of European architecture was written The foundations were laid even in ancient Roman times when the first attempts were made to design interiors and thus make space open to experience as something physical And at that time the Roman architects also started to develop building types that are still valid today thus creating the cornerstone of later Western architecture In it Rome's primacy remained unbroken whether it was with old St Peter's as the first medieval basilica or new St Peter's as the building in which Bramante and Michelangelo developed the High Renaissance or with works by Bernini and Borromini whose rich and lucid spatial forms were to shape Baroque as far as Vienna Bohemia and Lower Franconia and also with Modern buildings of which there are many unexpected pearls to be found in Rome All this is comprehensible only if it is presented historically i.e. in chronological sequence and so the guide has not been arranged topographically as usual but chronologically This means that one is not led in random sequence from a Baroque building to an ancient or a modern one but the historical development is followed successively Every epoch is preceded by an introduction that identifies its key features This produces a continuous lavishly illustrated history of the architecture of Rome and thus at the same time of the whole of the West Practical handling is guaranteed by an alphabetical index and detailed maps whose information does not just immediately illustrate the historical picture but also makes it possible to choose a personal route through history

Sociocultural Situatedness Roslyn M. Frank, René Dirven, Tom Ziemke, Enrique Bernárdez, 2008-08-27 The contributions contained in the second volume of the two volume set Body Language and Mind introduce and elaborate upon the concept of sociocultural situatedness understood broadly as the way in which minds and cognitive processes are shaped both individually and collectively by their interaction with socioculturally contextualized structures and practices and furthermore how these structures interact contextually with language and can become embodied in it Drawing on theoretical concepts and analytical tools within the purview of cognitive linguistics and related fields the volume explores the relationship between body language and mind focusing on the complex mutually reinforcing relationships holding between the sociocultural contextualisation of language and inversely the linguistic contextualisation of culture Stated differently the notion of sociocultural situatedness allows for language to be seen as a cultural activity and at the same time as a subtle mechanism for organizing culture and thought The volume offers a representative multi and interdisciplinary collection of new papers on sociocultural situatedness bringing together for the first time a wide variety of perspectives and case studies directed explicitly to elucidating the analytical potential of this concept for cognitive linguists and other researchers working in allied fields such as AI discourse studies and cognitive anthropology The book brings together several core issues related to the notion of sociocultural situatedness some of which have been addressed previously although to a large degree sporadically and from a variety of disciplinary perspectives without fully exploring the possible analytical advantages of this concept as a tool for investigating the role of culturally entrenched schemata in cognition and language In short this is the first comprehensive survey of sociocultural situatedness theory
