Spiraling Webs of Relation Joanne DiNova, 2005-09-16 This work builds on indigenous theory as evident in the writing of Willie Ermine Gregory Cajete Craig Womack Jace Weaver Laurie Anne Whitt Linda Tuhiwai Smith Voila Cordova Dennis McPherson and others It works towards a criticism that in accordance with the precepts of such theory is community oriented It argues for an examination of literature in terms of its function for or against the community in the expansive sense of the term

Unsettling Sights Corinn Columpar, 2010-03-11 *Unsettling Sights The Fourth World on Film* examines the politics of representing Aboriginality in the process bringing frequently marginalized voices and visions issues and debates into the limelight Corinn Columpar uses film theory postcolonial theory and Indigenous theory to frame her discussion of the cinematic construction and transnational circulation of Aboriginality The result is a broad interdisciplinary analysis of how Indigeneity is represented in cinema supported by more than twenty rigorous and theoretically informed case studies of contemporary feature films by both First and Fourth World filmmakers in the United States Canada New Zealand and Australia Columpar relies heavily on textual analysis of the films but also explores contextual issues in filmmaking such as funding personnel modes of production and means of distribution Part one of *Unsettling Sights* focuses on contact narratives in which the Aboriginal subject is constructed in reactive response to a colonizing or invading presence Films such as *The Piano* and *The Proposition* wherein a white man goes native and *The New World* and *Map of the Human Heart* which approach contact from the perspective of an Aboriginal character serve as occasions to examine the ways in which Aboriginal identities are negotiated within dominant cinema Part two shifts the focus from contact narratives to films that seek to define Aboriginality on its own terms with reference to a lost homeland and or Indigenous practices of history telling while texts such as *Once Were Warriors* and *Smoke Signals* foster an engagement with issues of deterritorialization relocation and urbanization discussion of *beDevil Atanarjuat* and *The Business of Fancydancing* among others bring questions of voice translation and the relationship between cinema and oral tradition to the forefront *Unsettling Sights* is the first significant scholarly examination of Aboriginality and cinema in an international context and will be invaluable to scholars and students in many fields including cinema studies anthropology critical race studies cultural studies and postcolonial studies

The Spiral Web on the Nature of Coincidence Paul Lester, 2000-06 Our lives are composed of coincidences that constantly shape us Most of the time we never learn of a coincidence that influences our life You only need to consider all the possible events since the creation of time that have occurred in your life and mine that make it possible for you to be reading these words and you have a sense of how many coincidences there are Of the ones we do discover most are curious synchronistic or serendipitous oddities that might make us giggle and tingle but that's about all But a few are nothing short of miraculous and contain the power to drastically change the direction and content of our lives Through matter of fact introductory chapters describing how to notice and control the coincidences you notice throughout your life to a series of short stories that

demonstrate the coincidences that drastically altered the author's life this book offers a theory of coincidence that is both spiritual and practical

Troubling Tricksters

Deanna Reder, Linda M. Morra, 2010-02-10

Troubling Tricksters is a collection of theoretical essays creative pieces and critical ruminations that provides a re-visioning of trickster criticism in light of recent backlash against it The complaints of some Indigenous writers the critique from Indigenous nationalist critics and the changing of academic fashion have resulted in few new studies on the trickster For example The Cambridge Companion to Native American Literature 2005 includes only a brief mention of the trickster with skeptical commentary And in 2007 Anishinaabe scholar Niigonwedom Sinclair a contributor to this volume called for a moratorium on studies of the trickster irrelevant to the specific experiences and interests of Indigenous nations One of the objectives of this anthology is then to encourage scholarship that is mindful of the critic's responsibility to communities and to focus discussions on incarnations of tricksters in their particular national contexts The contribution of Troubling Tricksters therefore is twofold to offer a timely counterbalance to this growing critical lacuna and to propose new approaches to trickster studies approaches that have been clearly influenced by the nationalists call for cultural and historical specificity

Spider Webs William Eberhard, 2020-12-22 In this lavishly illustrated first ever book on how spider webs are built function and evolved William Eberhard provides a comprehensive overview of spider functional morphology and behavior related to web building and of the surprising physical agility and mental abilities of orb weavers For instance one spider spins more than three precisely spaced morphologically complex spiral attachments per second for up to fifteen minutes at a time Spiders even adjust the mechanical properties of their famously strong silken lines to different parts of their webs and different environments and make dramatic modifications in orb designs to adapt to available spaces This extensive adaptive flexibility involving decisions influenced by up to sixteen different cues is unexpected in such small supposedly simple animals As Eberhard reveals the extraordinary diversity of webs includes ingenious solutions to gain access to prey in esoteric habitats from blazing hot and shifting sand dunes to capture ants to the surfaces of tropical lakes to capture water striders Some webs are nets that are cast onto prey while others form baskets into which the spider flicks prey Some aerial webs are tramways used by spiders searching for chemical cues from their prey below while others feature landing sites for flying insects and spiders where the spider then stalks its prey In some webs long trip lines are delicately sustained just above the ground by tiny rigid silk poles Stemming from the author's more than five decades observing spider webs this book will be the definitive reference for years to come

Autobiography as Indigenous Intellectual Tradition Deanna Reder, 2022-05-03 Autobiography as Indigenous Intellectual Tradition critiques ways of approaching Indigenous texts that are informed by the Western academic tradition and offers instead a new way of theorizing Indigenous literature based on the Indigenous practice of life writing Since the 1970s non Indigenous scholars have perpetrated the notion that Indigenous

people were disinclined to talk about their lives and underscored the assumption that autobiography is a European invention Deanna Reder challenges such long held assumptions by calling attention to longstanding autobiographical practices that are engrained in Cree and Métis or n hiyawak culture and examining a series of examples of Indigenous life writing Blended with family stories and drawing on original historical research Reder examines censored and suppressed writing by n hiyawak intellectuals such as Maria Campbell Edward Ahenakew and James Brady Grounded in n hiyawak ontologies and epistemologies that consider life stories to be an intergenerational conduit to pass on knowledge about a shared world this study encourages a widespread re evaluation of past and present engagement with Indigenous storytelling forms across scholarly disciplines

Molecular Origins of Brain and Body Geometry Antonio Lima-de-Faria,2014-10-07 New concepts arise in science when

apparently unrelated fields of knowledge are put together in a coherent way The recent results in molecular biology allow to explain the emergence of body patterns in animals that before could not be understood by zoologists There are no fancy curiosities in nature Every pattern is a product of a molecular cascade originating in genes and a living organism arises from the collaboration of these genes with the outer physical environment Tropical fishes are as startling in their colors and geometric circles as peacocks Tortoises are covered with the most regular triangles squares and concentric circles that can be green brown or yellow Parallel scarlet bands are placed side by side of black ones along the body of snakes Zebras and giraffes have patterns which are lessons in geometry with their transversal and longitudinal stripes their circles and other geometric figures Monkeys like the mandrills have a spectacularly colored face scarlet nose with blue parallel flanges and yellow beard All this geometry turns out to be highly molecular The genes are many and have been DNA sequenced Besides they not only deal with the coloration of the body but with the development of the brain and the embryonic process A precise scenario of molecular events unravels in the vertebrates It may seem far fetched but the search for the origin of this geometry made it mandatory to study the evolution of matter and the origin of the brain It turned out that matter from its onset is pervaded by geometry and that the brain is also a prisoner of this ordered construction Moreover the brain is capable of altering the body geometry and the geometry of the environment changes the brain Nothing spectacular occurred when the brain arrived in evolution Not only it came after the eye which had already established itself long ago but it had a modest origin It started from sensory cells on the skin that later aggregated into clusters of neurons that formed ganglia It also became evident that pigment cells that decide the establishment of the body pattern originate from the same cell population as neurons the neural crest cells This is a most revealing result because it throws light on the power that the brain has to rapidly redirect the coloration of the body and to change its pattern Recent experiments demonstrate how the brain changes the body geometry at will and within seconds an event that could be hardly conceived earlier Moreover this change is not accidental it is related to the surrounding environment and is also used as a mating strategy Chameleons know how to do it as well as flat fishes and octopuses No one would have dared to think that the brain had its own geometry How could the external geometry of solids or other figures of our environment be apprehended by neurons if these had no architecture of their own Astonishing was that the so called simple cells in the neurons of the primary visual cortex responded to a bar of light with an axis of orientation that corresponded to the axis of the cell s receptive field We tend to consider our brain a reliable organ But how reliable is it From the beginning the brain is obliged to transform reality Brain imagery involves form color motion and sleep Unintentionally these results led to unexpected philosophical implications Plato s pivotal concept that forms exist independently of the material world is reversed Atoms have been considered to be imaginary for 2 000 years but at present they can be photographed one by one with electron microscopes The reason why geometry has led the way in this inquiry is due to the fact that where there is geometry there is utter simplicity coupled to

rigorous order that underlies the phenomenon where it is recognized Order allows variation but imposes at the same time a canalization that is patent in what we call evolution The Web's Awake Philip D. Tetlow,2007-04-27 The central thesis of *The Web's Awake* is that the phenomenal growth and complexity of the web is beginning to outstrip our capability to control it directly Many have worked on the concept of emergent properties within highly complex systems concentrating heavily on the underlying mechanics concerned Few however have studied the fundamentals involved from a sociotechnical perspective In short the virtual anatomy of the Web remains relatively uninvestigated *The Web's Awake* attempts to seriously explore this gap citing a number of provocative yet objective similarities from studies relating to both real world and digital systems It presents a collage of interlinked facts assertions and coincidences which boldly point to a Web with powerful potential for life

Fostering a Climate of Inclusion in the College Classroom Lavonna L. Lovern,2018-03-12 This book examines inclusion teaching at the college and university level It establishes the importance of the Humanities disciplines and the use of qualitative analysis as a means of understanding and encouraging democratic materials and classroom organization The first section of the text provides two primers for those unfamiliar with pedagogical history and theory These primers are designed to give basic information and sources for additional study They trace pedagogical influences from foundationism neoliberalism conflict and critical theories to critical race theory Red pedagogy and decolonization theories The second half of the book focuses on strategies to assist those attempting classroom inclusion These chapters are designed to assist with practical ways in which inclusion can be advanced as well as strategies to assist junior faculty in the navigation of the politics of inclusive education *Politics and Aesthetics in Contemporary Native American Literature* Matthew Herman,2010-02 This book provides the historical framework for the shift in Native American literary studies away from cultural analyses toward more politically inflected and motivated perspectives and examines the key moments in this turn
