Spline Functions Larry L. Schumaker, 2019

Spline Functions Larry L. Schumaker, 2015-08-13 This book describes in detail the key algorithms needed for computing with spline functions and illustrates their use in solving several basic problems in numerical analysis including function approximation, numerical quadrature, data fitting, and the numerical solution of PDEs. The focus is on computational methods for bivariate splines on triangulations in the plane and on the sphere, although both univariate and tensor product splines are also discussed. The book contains numerous examples and figures to illustrate the methods and their performance. All of the algorithms in the book have been coded in a separate MATLAB package available for license. The package can be used to run all of the examples in the book and also provides readers with the essential tools needed to create software for their own applications. In addition to the included bibliography, a list of over 100 pages of additional references can be found on the book's website.

The Theory of Splines and Their Applications

Spline Functions Larry L. Schumaker, 2024-12-09 This book is a continuation of the author's earlier book *Spline Functions: Computational Methods* published in 2015 by SIAM. This new book focuses on computational methods developed in the last ten years that make use of splines to approximate functions and data and to solve boundary value problems. The first half of the book works with bivariate spaces of splines defined on H triangulations, T meshes, and curved triangulations. Trivariate tensor product splines

and splines on tetrahedral partitions are also discussed. The second half of the book makes use of these spaces to solve boundary value problems with a special emphasis on elliptic PDEs defined on curved domains. The book contains numerous examples and figures to illustrate the methods and their performance. In addition to the included bibliography, a 125 page list of additional references can be downloaded from the SIAM website. All of the algorithms in the book have been coded in MATLAB and are included in a package that can also be downloaded from the website. It can be used to run all of the examples in the book. The package also provides an extensive toolbox of functions that readers can utilize to develop their own spline software. The book is designed for mathematicians, engineers, scientists, and anyone else wanting to make use of spline functions for numerical computation.

Approximation Theory and Spline Functions S.P. Singh, J.H.W. Burry, B. Watson, 2012-12-06. A NATO Advanced Study Institute on Approximation Theory and Spline Functions was held at Memorial University of Newfoundland during August 22-September 2, 1983. This volume consists of the Proceedings of that Institute. These Proceedings include the main invited talks and contributed papers given during the Institute. The aim of these lectures was to bring together Mathematicians, Physicists, and Engineers working in the field. The lectures covered a wide range including Multivariate Approximation, Spline Functions, Rational Approximation, Applications of Elliptic Integrals, and Functions in the Theory of Approximation and Padé Approximation. We express our sincere thanks to Professors E.W. Cheney, J. Meinguet, J.M. Phillips, and H. Werner, members of the International Advisory Committee. We also extend our thanks to the main speakers and the invited speakers whose contributions made these Proceedings complete. The Advanced Study Institute was financed by the NATO Scientific Affairs Division. We express our thanks for the generous support. We wish to thank members of the Department of Mathematics and Statistics at Memorial University who willingly helped with the planning and organizing of the Institute. Special thanks go to Mrs. Mary Pike who helped immensely in the planning and organizing of the Institute, and to Miss Rosalind Genge for her careful and excellent typing of the manuscript of these Proceedings.

Spline Functions and Multivariate Interpolations Borislav D. Bojanov, H. Hakopian, B. Sahakian, 2013-06-29. Spline functions entered Approximation Theory as solutions of natural extremal problems. A typical example is the problem of drawing a function curve through given $n+1$ points that has a minimal norm of its k th derivative. Isolated facts about the functions now called splines can be found in the papers of L. Euler, A. Lebesgue, G. Birkhoff, J. Favard, L. Tschakaloff. However, the Theory of Spline Functions has developed in the last 30 years by the effort of dozens of mathematicians. Recent fundamental results on multivariate polynomial interpolation and multivariate splines have initiated a new wave of theoretical investigations and variety of applications. The purpose of this book is to introduce the reader to the theory of spline functions. The emphasis is given to some new developments such as the general Birkhoff's type interpolation, the extremal properties of the splines, and their prominent role in the optimal recovery of functions, multivariate interpolation by polynomials and splines. The material presented is based on the lectures of the authors given to the students at the

University of Sofia and Yerevan University during the last 10 years Some more elementary results are left as exercises and detailed hints are given
