## **Spoken Word Production And Its Breakdown In Aphasia:**

**Spoken Word Production and Its Breakdown In Aphasia** Lyndsey Nickels, 2014-06-03 This volume combines in depth reviews of models of spoken word production and cognitive neuropsychological disorders of spoken word production The first section provides a detailed discussion of the development and structure of current models of language production using data from normal subjects It is these models that form the basis of the study and therefore the text attempts to explain their processing mechanisms and assumptions clearly The evidence used for the development of these models is described including experimental studies and observation of patterns in naturally occurring speech errors The second section focuses on studies of aphasic naming disorders and discusses these disorders in terms of the model described in the first section The emphasis is on single case studies These are reviewed in three chapters examining semantic errors and disorders the range of symptoms attributed to disorders of lexical retrieval and deficits of phonological encoding The text assumes that the reader has some familiarity with the linguistic and psychological terminology relevant to these areas and therefore is most suited to the graduate student or researcher lecturer

*Rehabilitation of Spoken Word Production in Aphasia* Lyndsey Nickels, 2002 This volume focuses on the remediation of impairments of word production in aphasia It is restricted to studies focusing on single word production and comprises papers by some of the researchers most active in this field worldwide The scope of the papers is broad and includes many relatively under researched areas and techniques All the papers have in common a methodological rigour and the use of a single case or case series approach A range of treatment tasks are evaluated phonological tasks such as phonological cueing and word repetition and judgements regarding the phonological form orthographic tasks such as orthographic cueing word reading and writing to dictation semantic tasks such as semantic cueing the use of gesture computer presentation of tasks and even just repeated attempts at naming In addition the individuals treated using these techniques varied in the nature of their impairments and or level of impairment that was targeted The majority aimed to improve word retrieval generally but one treatment was aimed specifically at verb retrieval and another at improving accuracy of word production for an individual with a phonological encoding impairment Each paper relates the outcome of treatment to theoretical accounts of impairment and one explicitly uses the results of therapy to inform these theories Taken together these papers provide a snapshot of the state of the art in the rehabilitation of word production in aphasia

*Cognitive Neuropsychological Approaches to Spoken Word Production* Lyndsey Nickels, 2002 The papers in this volume all examine the nature of spoken word production in aphasia and how this can inform current theories of language processing It comprises 7 papers by some of the foremost researchers in the field The first paper in the volume is an introduction by the editor Dr Lyndsey Nickels which reviews the state of the art of the cognitive neuropsychology of spoken word production both in terms of theory and methodology The individual papers address a range of topical issues including the levels of processing in speech production Lambon Ralph Moriarty Sage et al Wilshire the nature of the

interaction between levels of processing Goldrick and effects of different factors on naming word class and context Berndt Burton Haendiges phonemic and orthographic cues Best Herbert Hickin Osborne lexical stress Howard Smith Taken together this volume provides the reader with an insight into the cutting edge of research in spoken word production      **Aspects of Language Production** Linda Wheeldon,2013-12-16 This volume represents major research issues in language production today presenting readers with a picture of the breadth of current research in the field Contributors have focused on models of visual word processing aphasic speech object recognition and language production in children Many chapters highlight the need for psychological models of language production to learn from theoretical linguistics in order to become better informed about the structure of language itself Therefore this volume also includes chapters written by linguists for psychologists which serve to remind us of the complexity of structure and process in the languages of the world      *Phonological Encoding and Monitoring in Normal and Pathological Speech* Robert J. Hartsuiker,2005 This book reports recent research on mechanisms of normal formulation and control in speaking and in language disorders such as stuttering aphasia and verbal dyspraxia The theoretical claim is that such disorders result both from deficits in a component of the language production system and interactions between this component and the system that monitors for errors and undertakes a corrective behaviour In particular the book focuses on phonological encoding in speech the construction of a phonetic plan for utterances on verbal self monitoring checking for correctness and initiating corrective action if necessary and on interactions between these processes Bringing together sixteen original chapters by leading international researchers this volume represents a coherent statement of current thinking in this exciting field The aim is to show how psycholinguistic models of normal speech processing can be applied to the study of impaired speech production This book will prove invaluable to any researcher student or speech therapist looking to bridge the gap between the latest advances in theory and the implications of these advances for language and speech pathology      **Multidisciplinary Approaches to Language Production** Thomas Pechmann,Christopher Habel,2004 This volume comprises contributions from different disciplines cognitive psychology linguistics computer science neuroscience concerned with the generation of natural speech It summarizes the outcome of a six year long priority program funded by the German Research Foundation DFG that aimed at bringing together colleagues with different viewpoints but sharing a principal interest in the cognitive processes underlying language production The result is a state of the art discussion of one of the most fascinating branches of human behavior taking into account a particularly rich multidisciplinary empirical data base      Handbook of Communication Disorders Amalia Bar-On,Dorit Ravid,Elitzur Dattner,2018-04-23 The domain of Communication Disorders has grown exponentially in the last two decades and has come to encompass much more than audiology speech impediments and early language impairment The realization that most developmental and learning disorders are language based or language related has brought insights from theoretical and empirical linguistics and its clinical applications to the forefront of Communication Disorders science

The current handbook takes an integrated psycholinguistic neurolinguistic and sociolinguistic perspective on Communication Disorders by targeting the interface between language and cognition as the context for understanding disrupted abilities and behaviors and providing solutions for treatment and therapy Researchers and practitioners will be able to find in this handbook state of the art information on typical and atypical development of language and communication dis abilities across the human lifespan from infancy to the aging brain covering all major clinical disorders and conditions in various social and communicative contexts such as spoken and written language and discourse literacy issues bilingualism and socio economic status

**Aphasia and Its Therapy** Anna Basso,2003-01-09 This is the first single authored book to attempt to bridge the gap between aphasia research and the rehabilitation of patients with this language disorder Studies of the deficits underlying aphasia and the practice of aphasia rehabilitation have often diverged and the relationship between theory and practice in aphasiology is loose The goal of this book is to help close this gap by making explicit the relationship between what is to be rehabilitated and how to rehabilitate it Early chapters cover the history of aphasia and its therapy from Broca s discoveries to the 1970s and provide a description of the classic aphasia syndromes The middle section describes the contribution of cognitive neuropsychology and the treatment models it has inspired It includes discussion of the relationship between the treatment approach and the functional model upon which it is based The final chapters deal with aphasia therapy After providing a sketch of a working theory of aphasia Basso describes intervention procedures for disorders resulting from damage at the lexical and sentence levels as well as a more general conversation based intervention for severe aphasics Anna Basso has run an aphasia rehabilitation unit for more than thirty years In this book she draws on her considerable experience to provide researchers clinicians and their students and trainees in speech language pathology and therapy aphasiology and neuropsychology with comprehensive coverage of the evolution and state of the art of aphasia research and therapy

Handbook of Cognitive Neuropsychology Brenda Rapp,2015-12-22 This volume reviews the full range of cognitive domains that have benefited from the study of deficits Chapters covered include language memory object recognition action attention consciousness and temporal cognition

**Anomia** Matti Laine,Nadine Martin,2013-04-15 Naming is a fundamental aspect of language Word finding deficit anomia is the most common symptom of language dysfunction occurring after brain damage Besides its practical importance anomia gives a fascinating view on the inner workings of language in the brain There has been significant progress in the study of anomia in recent years including advances in neuroimaging research and in psycholinguistic modelling Written by two internationally known researchers in the field this book provides a broad integrated overview of current research on anomia Beginning with an overview of psycholinguistic research on normal word retrieval as well as the influential cognitive models of naming the book goes on to review the major forms of anomia Neuroanatomical aspects clinical assessment and therapeutic approaches are reviewed and evaluated Anomia Theoretical and Clinical Aspects gives a thorough and up to date examination of the research and treatment of naming disorders in

neurological patients It covers both theory and practice and provides invaluable reading for researchers and practitioners in speech and language disorders neuropsychology and neurology as well for advanced undergraduate students and graduate students in the field

**The Handbook of Psycholinguistic and Cognitive Processes** Jackie Guendouzi,Filip Loncke,Mandy J. Williams,2011-01-07 This handbook includes an overview of those areas of cognition and language processing that are relevant to the field of communication disorders and provides examples of theoretical approaches to problems and issues in communication disorders The first section includes a collection of chapters that outline some of the basic considerations and areas of cognition and language that underlie communication processing a second section explains and exemplifies some of the influential theories of psycholinguistic cognitive processing and the third section illustrates theoretical applications to clinical populations There is coverage of theories that have been either seminal or controversial in the research of communication disorders Given the increasing multi cultural workload of many practitioners working with clinical populations chapters relating to bilingual populations are also included The volume book provides a single interdisciplinary source where researchers and students can access information on psycholinguistic and cognitive processing theories relevant to clinical populations A range of theories models and perspectives are provided The range of topics and issues illustrate the relevance of a dynamic interaction between theoretical and applied work and retains the complexity of psycholinguistic and cognitive theory for readers both researchers and graduate students whose primary interest is the field of communication disorders

*The Handbook of Clinical Neuropsychology* Jennifer Gurd,Udo Kischka,John Marshall,2012-01-12 Clinical neuropsychology remains one of the fastest growing specialities within clinical psychology neurology and the psychiatric disciplines This second edition provides a practical guide for those interested in the professional application of neuropsychological approaches and techniques in clinical practice

*The SAGE Encyclopedia of Human Communication Sciences and Disorders* Jack S. Damico,Martin J. Ball,2019-03-01 The SAGE Encyclopedia of Human Communication Sciences and Disorders is an in depth encyclopedia aimed at students interested in interdisciplinary perspectives on human communication both normal and disordered across the lifespan This timely and unique set will look at the spectrum of communication disorders from causation and prevention to testing and assessment through rehabilitation intervention and education Examples of the interdisciplinary reach of this encyclopedia A strong focus on health issues with topics such as Asperger s syndrome fetal alcohol syndrome anatomy of the human larynx dementia etc Including core psychology and cognitive sciences topics such as social development stigma language acquisition self help groups memory depression memory Behaviorism and cognitive development Education is covered in topics such as cooperative learning special education classroom based service delivery The editors have recruited top researchers and clinicians across multiple fields to contribute to approximately 640 signed entries across four volumes

**Challenging Aphasia Therapies** Judith Felson Duchan,Sally Byng,2004-08-02 Challenging Aphasia Therapies presents an entirely new approach to thinking on the

subject of aphasia therapy by liberating it from traditional models This is achieved through a process of reflection in which many assumptions previously taken for granted are challenged and reassessed Internationally renowned experts successfully demonstrate the benefits of learning about aphasia therapy through the process of engaging in it Topics covered include the role of context culture and conversation in shaping and directing aphasia therapy the ethical issues that arise from the current tensions between market driven health care industries and the moral commitment to their client welfare the value of therapy Contributors challenge the common notion of successful therapy as solely performance related the potential and competent use of humour in aphasia therapy The identification of the strengths and limitations of clinical models and the focus on relevant directions for therapy will be of interest to practising clinicians as well as anyone involved in study or research in speech and language therapy     [Aphasia and Language](#) Stephen E. Nadeau, Leslie Janine Rothi, Bruce

Crosson, 2000-09-13 This groundbreaking work brings together leading scientist practitioners to review what is known about aphasia and to relate current knowledge to treatment Integrating traditional linguistic formulations with new insights derived from cognitive neuroscience this volume explores the neuropsychological bases of both normal and pathologic language It reflects an understanding of brain structure and function based on new developments in connectionist modeling and functional neuroimaging     **Speaking, Writing and Communicating**, 2023-05-24 Speaking Writing and

Communicating Volume 78 in The Psychology of Learning and Motivation series provides the latest release in this important resource that features empirical and theoretical contributions in cognitive and experimental psychology Presents the latest information in the highly regarded Psychology of Learning and Motivation series Provides an essential reference for researchers and academics in cognitive science Contains information relevant to both applied concerns and basic research

*Bridging Reading Aloud and Speech Production* Simone Sulpizio, Sachiko Kinoshita, 2016-07-25 For decades human cognition involved in reading aloud and speech production has been investigated extensively a quote search of the two in google scholar produces about 83 000 and 255 000 results respectively This large amount of research has produced quite detailed descriptions of the cognitive mechanisms that allow people to speak or to read aloud a word However despite the fact that reading aloud and speech production share some processes generation of phonology and preparation of a motor speech response the research in this two areas seems to have taken parallel and independent tracks with almost no contact between the two The present Research Topic takes an initial step towards building a bridge that will link the two research areas as we believe that such an endeavour is essential for moving forward in our understanding of how the mind brain processes words To this aim we encourage contributions exploring the relation between speech production and reading aloud The questions the Research Topic should address include but are not limited to the following To what extent are speech production and word reading reading aloud similar Are there some shared components and or mechanisms between the two process Is the time course of the supposed shared mechanisms activation similar in the two processes How does the different

input conceptual vs orthographic interact with the types of information that reading and speaking share semantic and phonological knowledge articulatory codes How does a difference in the input affect the supposed common stages of processing i e phonological encoding and articulatory planning and execution We welcome any kind of contribution e g original research article review opinion that answers the above or other questions related to the Topic *Number and Language Processing* Xavier Seron,2020-08-26 There is psychological and neurobiological evidence that number and language processing present some specificities and may dissociate after brain damage Furthermore animals and babies seem to be able to discriminate small numerosities in a non symbolic way However one of the specificities of the human species is the development of language and symbolic processes The acquisition and development of arithmetic is thus bound to the acquisition of language and symbolic notations In this special issue the relationship between language and number processing is discussed through the examination of the similarities and divergences of language and number disorders in aphasic subjects in patients with dementia and in children with specific acquisition deficits A separate contribution is also devoted to the rehabilitation of number and calculation deficits in brain lesioned subjects **The Cambridge Handbook of Biolinguistics** Cedric Boeckx,Kleanthes K. Grohmann,2013-02-14 Biolinguistics involves the study of language from a broad perspective that embraces natural sciences helping us better to understand the fundamentals of the faculty of language This Handbook offers the most comprehensive state of the field survey of the subject available A team of prominent scholars working in a variety of disciplines is brought together to examine language development language evolution and neuroscience as well as providing overviews of the conceptual landscape of the field The Handbook includes work at the forefront of contemporary research devoted to the evidence for a language instinct the critical period hypothesis grammatical maturation bilingualism the relation between mind and brain and the role of natural selection in language evolution It will be welcomed by graduate students and researchers in a wide range of disciplines including linguistics evolutionary biology and cognitive science **The Effectiveness of Rehabilitation for Cognitive Deficits** Peter W. Halligan,Derick T. Wade,2005 In this book some of the leading clinicians and cognitive neuroscientists consider the effectiveness of cognitive rehabilitation They situate the issues within an overall context that considers the different types and levels of diagnosis and assessment the adequacy of underlying cognitive theory for rehabilitation and more importantly the clinical effectiveness of current treatments to improve functional recovery By employing an evidence based approach that critically evaluates the published literature the book provides for a better understanding of the strengths and limitations of the cognitive approach and hopefully a more realistic expectation of its outcome for patients with neurological deficits The book will serve as a valuable source for a wide spectrum of professionals who deal with the neuropsychological and neurological effects of brain damage
