*Drawing Thought* Andrea Kantrowitz, 2022-10-11 Drawing as a tool of thought an investigation of drawing cognition and creativity that integrates text and hand drawn images Drawing is a way of constructing ideas and observations as much as it is a means of expressing them When we are not ready or able to put our thoughts into words we can sometimes put them down in arrangements of lines and marks Artists designers architects and others draw to generate explore and test perceptions and mental models In *Drawing Thought* artist educator Andrea Kantrowitz invites readers to use drawing to extend and reflect on their own thought processes She interweaves illuminating hand drawn images with text integrating recent findings in cognitive psychology and neuroscience with accounts of her own artistic and teaching practices The practice of drawing seems to be found across almost all known human cultures with its past stretching back into the caves of prehistory It takes advantage of the ways in which human cognition is embodied and situated in relationship to the environments in which we find ourselves We become more aware of the interplay between our external surroundings and the inner workings of our minds as we draw We can trace moments of perception and understanding in a sketchbook that might otherwise be lost and go back to reexamine and revise those traces later Kantrowitz encourages readers to draw out their own ideas and observations through a series of guided exercises and experiments with her lively drawings and engaging text pointing the way Drawing is a tool for thought in anyone s hands it is creativity in action

Conscious experience and thought content are customarily treated as distinct problems This book argues that they are not Part One develops a chastened empiricist theory of content which cedes to experience a crucial role in rooting the contents of thoughts but deploys an expanded conception of experience and of the ways in which contents may be rooted in experience Part Two shows how were the world as we experience it to be our neurophysiology would be sufficient to constitute capacities for the range of intuitive thoughts recognized by Part One Part Three argues that physics has shown that our experience is not veridical and that this implies that no completely plausible account of how we have thoughts is comprehensible by humans Yet this leaves thoughts not especially suspect because such considerations also imply that all positive and contingent human conceptions of anything are false **Random Sketches and Wandering Thoughts**
