Taurine In Nutrition And Neurology Advances In Experimental Medicine And Biology Volume 139:

Taurine in Nutrition and Neurology Ryan J. Huxtable, 2013-04-09 *Ionic Channels and Effect of Taurine on the Heart* Denis Noble, Yung E Earm, 2012-12-06 This book is based on papers presented at a Symposium held in Seoul Korea in 1992 The idea for the symposium developed naturally from work in which Professor Yung E Earm at Seoul National University had been involved both in my laboratory in Oxford and in his own laboratory in Seoul concerning the possible role of certain amino acids like taurine that are strongly concentrated by the cells of the heart and the relationship between such acids and membrane ionic currents The first obvious question was whether it is possible to identify the transport mechanisms involved for taurine and whether they are electrogenic The second question is what function could be served by such processes does taurine play an essential role in cardiac tissue and is this important in protecting the heart from disease With his colleagues in the Korean Physiological Society Professor Earm set about the task of financing and organizing a meeting at which some of the world's leading cardiac electrophysiologists and taurine specialists could discuss these questions The finance was generously provided by the Dong A Pharmaceutical Company one of the leading scientific companies in Korea

Mechanisms of Cell-Mediated Cytotoxicity William R. Clark, 2013-11-11 The First International Workshop on Mechanisms in Cell Mediated Cytotoxicity was held at Carry le Rouet France September 14-16 1981 The Workshop brought together for the first time leading investigators in each of the principal areas of cell mediated cytotoxicity as well as experts in the area of complement mediated cytotoxicity Formal research presentations were held to a minimum the emphasis being on open discussion of current knowledge about mechanisms of cytotoxicity in each of the systems under consideration The major objectives of the Workshop were 1 to compare and integrate what is known about the mechanisms of cytotoxicity in each system 2 to determine whether on the basis of information in hand it seems likely that the mechanisms of cytotoxicity in the various systems are the same or are unique and 3 to stimulate thinking about new approaches to elucidating the fundamental mechanisms by which certain cells are able to kill other cells *Biochemistry and Function of Phagocytes* F.

Rossi, 2012-12-06 This volume collects the papers presented at the Second European Conference on Phagocytic Leucocytes which was held in Trieste September 15-18 1980 The Conference was the continuation of the thread of a discourse initiated with the First European Conference on Phagocytic Leucocytes which was held also in Trieste in 1976 In fact in both Conferences the biochemical aspects of the basic functions of phagocytes that is movement metabolism secretion and bactericidal activity were mainly emphasized In the Second Conference two additional subjects were also dealt with and those are the tumoricidal activity of phagocytes and the clinical aspects of phagocyte functions In connection with the latter subject a Round Table on the Clinical Application of Leucocyte Function Tests was held during the Conference and the proceedings are reported in this book in the hope that they may be useful to those who are interested in the relationship between phagocytes and diseases The number of papers which are being published concerning the phagocytic process is

such that one wonders whether publication of a new book in this field is necessary However the philosophy which inspired the editing of this book differs from that underlying publication of original articles in scientific journals We started from the common notion that the real progress of our knowledge is not necessarily proportional to the amount of published material in that specific field Neural Mechanisms in Taste Robert H. Cagan,2020-02-03 The purpose of NEURAL MECHANISM in

TASTE is to emphasize physiological principles and reveal new insights of this most recent research This book is aimed to reach scientists within the broad area of neurophysiology as well as those in other disciplines who have interests in sensory mechanisms The focus is on two major themes peripheral mechanisms and neural processing at the central level Every chapter is written by an expert on the subject matter including definitive updates on the status of each topic This work is not only useful to researchers in taste but also to basic and applied scientists in related fields such as food technology doctoral and postdoctoral students Biological Reactive Intermediates—II Robert Snyder,2014-11-14 **Mucus in Health and**

Disease—II Eric Chantler,2012-12-06 This second International Symposium on Mucus in Health and Disease once again brings together basic scientists such as Biochemists Anatomists Biologists and Clinicians who are dealing with aspects of mucus in the various tracts of the body where it is of such great functional importance It is fitting that the meeting should take place at Manchester University where there is so much activity in this field and our grateful thanks are due to Or Eric Chantler for his untiring efforts in organising this meeting At the first Mucus meeting Sir Francis Avery Jones stated this is a subject which will justify further Symposia both local and international As he predicted this meeting succeeds the first and adds further to our progress in understanding the complex and unique structure and function of the mucus secretion in its various sites of the body Much was learned from the first meeting and it is hoped that the second will be an appropriate successor to it The emphasis in this meeting has been to encourage discussion and the presentation of research material In this respect review articles have been kept to a minimum The structure of the Conference has been organised around eight keynote addresses one on the biosynthesis of the general mucus glycoproteins and another on its physical properties Other keynote papers are on the biochemical and clinical aspects of mucus in the respiratory gastrointestinal and urogenital tracts by recognised authorities in these subjects **Biochemistry and Biology of Coronaviruses** V. Ter Meulen,2013-06-29

This book is the result of an international symposium held at the Institute of Virology and Immunobiology of the University of Würzburg Germany in October 1980 The intent of this symposium was to provide an opportunity to compare the data on coronavirus structure and replication as well as to discuss mechanisms of pathogenesis For over a decade coronaviruses have been recognized as an important group of viruses which are responsible for a variety of diseases of clinical importance in animals and man Recently new and interesting data on the molecular biology and pathogenesis of coronaviruses have become available and this led us to organize this meeting The uniformity and diversity in this virus group was evaluated from a molecular point of view and the replication of coronaviruses appears to involve aspects which may be unique for this virus

group Additionally in contrast to other positive strand RNA viruses it became clear that coronaviruses readily establish persistent infections in the host a phenomenon which may lead to the different subacute or chronic disorders manifested during coronavirus infection This volume presents a series of articles based upon the scientific presentation given at the symposium In addition there are two articles by B W J Mahy and D A J Tyrrell which summarize the current state of art concerning the biochemistry and biology of coronaviruses respectively We believe this book will be of interest to all virologists and particularly to both established workers and newcomers to this field V

Composition and Function of Cell Membranes Stewart Wolf, Allen K. Murray, 2012-12-06 The present volume contains the edited transcript of a Totts Gap Colloquium held May 19 21 1980 sponsored by the Muscular Dystrophy Association The aim of the colloquium was to bring into focus data relating to cell membranes that might contribute to understanding the pathogenic mechanism of Duchenne muscular dystrophy A major impediment to progress in understanding the pathogenesis of muscular dystrophy has been the failure so far to identify the basic genetic defect Pending the identification of the genetic lesion in Duchenne dystrophy and in view of scattered but persistent indications of a basic membrane disturbance it seemed worthwhile to explore in open dialogue the current state of knowledge of membrane morphology and chemistry with an eye to possible leads for further investigation The participants drawn from a variety of interested disciplines attempted to synthesize and reconcile their findings and to identify crucial areas of ignorance in need of exploration For the most part they avoided specialized jargon and spoke in a language that could be understood by the rest of the group Apart from providing a review of widely varying approaches to the study of the composition and behavior of cell membranes the discussions brought together current thinking on strategies and approaches to the study of the pathogenesis of muscular dystrophy Already the personal contacts made at the colloquium have led to new inter institutional collaborative investigations

Terminal Transferase in Immunobiology and Leukemia Umberto Bertazzoni, 2012-12-06 This book contains the proceedings of a conference devoted to the study of the structure and function of Terminal deoxynucleotidyl Transferase TdT and its utilization as biochemical marker in immunobiology and leukemia held in Elba Italy on May 28 31 1981 The enzyme has been known to nucleic acid biochemists for more than 20 years and has proved to be an excellent tool for making deoxypolymers labeling DNA fragments and adding homopolymer tails to restriction endonuclease fragments from DNA Since the discovery of its peculiar tissue distribution normally restricted to the thymus and bone marrow and of its abnormal occurrence in human leukemic lymphoblasts TdT has become one of the most widely used markers in the study of lymphocyte differentiation and in the classification of hematopoietic neoplasia The subject seemed most appropriate for a meeting where molecular and cellular biologists immunologists and hematologists could convene for the first time to discuss both basic research and the clinical aspects of the problem Among the goals achieved by this workshop was the sharing of information about the enzymology of TdT biochemical and immunological methodology and the correlation of TdT with other markers in the diag

nosis of leukemia The remarkable accordance of results presented here by five independent hematological institutions from analysis of TdT in several thousands of leukemic patients marks the importance of this enzyme as a diagnostic and prognostic tool in these diseases
