Tcell Subsets And Cytokines Interplay In Infectious Diseases:

T-Cell Subsets and Cytokines Interplay in Infectious Diseases Mustafa A.S., Al-Attayah R.J., Nath I., Chugh T.D., 1996
Presenting a wealth of new data on the interaction among T cell subsets and cytokines this book offers a fresh perspective on infectious diseases It provides useful insights into the nature and treatment of helminthic and mycobacterial infections with special emphasis on leprosy leishmaniasis malaria and trypanosomiasis The outcome of the host response to infectious agent is seen as depending upon the T cell subsets activated and the cytokines produced by them and other cells such as macrophages B cells and basophils Experts contributions shed new light on how TH0 cells are preferentially activated and differentiated into TH1 or TH2 subsets TH1 and TH2 cells and their cytokines induce both protective immune responses and adverse immune reactions to infectious agents cytokines modulate the response of infectious diseases to chemotherapy and cytokines their receptors and antagonist and anti cytokine antibodies can be used in therapy Those working in the fields of immunology parasitology microbiology and vaccine development particularly if they are interested in tropical diseases will find the volume an invaluable source of information *T-Cell Subsets and Cytokines Interplay in Infectious Diseases* A. S. Mustafa, R. J. Al-Attayah, I. Nath, T. D. Chugh, 1996-03-05 *International Conference "T-cell Subsets and Cytokines Interplay in Infectious Diseases"*, 1993 **Biological Signals**, 1996 *Infection and Immunity* D H Davies, M A Halablab, T W K Young, F. E. G. Cox, J. Clarke, 2002-09-11 This concise text explores the interactions between pathogens and the immune system Taking a disease based approach it explains how micro organisms adapted to growth in human hosts can evade the immune system and cause disease The opening chapter overviews the innate and adaptive immune responses to microbes Subsequent chapters are specific *Immune evasion strategies in protozoan-host interactions* Alexandre Morrot, 2024-08-13 The protozoa are the most ancient members of the animal kingdom and they have evolved the intracellular parasitism to ensure their survival strategies Protozoan parasites that infect humans are extremely diverse among eukaryotes They are responsible for many human diseases such as amebiasis Chagas disease malaria toxoplasmosis leishmaniasis and African sleeping sickness The ability of protozoans to cause disease depends on the nature and number of infecting organisms the route of infection the virulence factors associated with the microorganism and the strength of host defenses This host parasite interaction is also subject to constant change as the infection proceeds and can lead to a range of outcomes from elimination of the pathogen to death of the host depending on the states of latency and the extent of colonization that the protozoan achieves in the course of infection Several species of parasitic protozoa harbor specialized virulence factors whose products can overcome the host s immunity and promote their survival These factors act at several different checkpoints of the host immune responses from the first components of the innate immune response to the induction and maintenance of adaptive memory responses Many protozoan species have evolved mechanisms that modulate and inhibit host sensors microRNA circuits and signaling pathways that permit the host to detect infection These factors can act inter alia by

inhibiting the complement cascade subverting phagocyte activation and impairing leukocyte migratory responses so undermining the immune system thus facilitating the pathogen evasion and its continued persistence in the host In this research topic we welcome the contribution of original research article as well as reviews on the field **Trypanosomes and Trypanosomiasis** Stefan Magez, Magdalena Radwanska, 2013-09-24 This new volume written by experts in the field of trypanosome research covers every aspect of trypanosome vector host biology It is a must read for basic researchers working with trypanosomes and related organisms infection and drug development as well as parasitology in a broader sense

Medical Principles and Practice ,1996 Handbook of Vertebrate Immunology Paul-Pierre Pastoret, Philip Griebel, Hervé Bazin, André Govaerts, 1998-05-21 This unique book provides a comprehensive and comparative guide to the immune systems of major vertebrate species including domestic and wild animals of veterinary or medical interest fish and amphibia Data in this essential reference work has been compiled by world renowned editors and an international group of authors For each species the information is presented in a structured user friendly format allowing easy cross reference and comparison between the various species This book will be considered the definitive reference work on vertebrate immunology and will be essential for scientists and professionals working in Immunology Vaccinology or with Animal Models for students of Veterinary or Human Medicine Biology and researchers in Comparative Medicine and Physiology Each section devoted to a major animal group covers Lymphoid organs and their anatomical disposition Leukocytes and their markers Leukocyte traffic and associated molecules Cytokines T cell receptors Immunoglobulins MHC antigens Ontogeny of the immune system Passive transfer of immunity Neonatal immune responses Non specific immunity Complement system Mucosal immunity Immunodeficiencies Tumours of the immune system Autoimmunity The Interplay Between Immune Activation and Cardiovascular Disease During Infection, Autoimmunity and Aging: The Role of T Cells Marta Catalfamo, Sara Ferrando-Martinez, Eva Reali, 2021-08-25
