biodiversity provide a wide range of ecosystem services and products and support the livelihoods of millions of people But is
forest management a viable conservation strategy in the tropics Supporters of sustainable forest management have promoted
it as a solution to problems of both biodiversity protection and economic stagnation Detractors insist that any conservation
strategy short of fully protected status is a waste of resources and that forest management actually hastens deforestation By
focusing on a set of critical issues and case studies this book explores the territory between these positions highlighting the
major factors that contribute to or detract from the chances of achieving forest conservation through sustainable
management
