The Origin And Early Evolution Of Animals:

The Origin and Early Evolution of Animals Earl D. Hanson, 1977 **The Origin and Early Evolution of Life** Tom Fenchel, 2002
Origin and Early Evolution of Life draws on evidence from molecular genetics the structure and function of extant organisms and geology It covers the period from about 4 billion years ago when life is thought to have originated to about 600 million years ago when multicellular organisms first arose There are significant gaps in our understanding of the earliest evolution of life forms but an insight into the topic leads to a more profound understanding of life itself Particular emphasis is placed on the fact that although life arose very soon after the origin of the Earth it was represented only by simple microbial life forms for approximately 85% of this time Increase in complexity beyond the microbial level took place only very late in the history of life **Origin and Early Evolution of the Metazoa** Jere H. Lipps, Philip W. Signor, 2013-11-21

Several years ago we realized that the most prominent ideas that had been expressed about the origin and early evolution of the Metazoa seemed to have been developed chiefly by zoologists using evidence from modern species without reference to the fossil record Paleontologists had in fact put forth their own ideas but the zoological and the paleontological evidence were about the problem seldom considered together especially by zoologists We believed that the paleontological documentation of the first Metazoa was too scattered too obscure to Western readers and much of it too recent to have been readily available to our colleagues in zoology Whether or not that was entirely true we thought that a single volume reviewing the fossil record of the earliest Metazoa would be useful to many in both paleontology and zoology especially since so much new information has been developed in the last few years Some of this information has been summarized in general articles recently but an overview of most of the field does not exist We therefore organized this book in five parts so that the evidence could be placed in perspective and summarized and inferences made from it Part I introduces the previous hypotheses that have been proposed for the origin and early radiation of Metazoa Part II consists of two summary chapters that set the sedimentological geochemical and biological background to the known radiations of Metazoa

Origin and Early Evolution of Amniotes Jörg Fröbisch, Mark Joseph MacDougall, Michel Laurin, Sean P. Modesto, Robert R. Reisz, 2025-09-08
Amniotes comprise all fully terrestrial vertebrates and include extant squamates turtles crocodiles birds and mammals The origin of amniotes tightly linked to the amniotic egg as a key innovation represents a major transition in the evolutionary history of tetrapods Amniotes first appeared in the fossil record about 318 million years ago and their early evolution diversification ecology and phylogenetic relationships have received considerable and increasing interest and research attention over the past decades Recently several new hypotheses regarding early amniote interrelationships have been proposed and it is now apparent that the origin and early evolution of Amniota is not as clear as was previously thought In order to better understand early amniote evolution and test existing hypotheses it is critical to continue expanding upon past work with the addition of new data and application of modern technologies and approaches **Early Evolution**

Martino Rizzotti,2013-12-01 It is now accepted that the first cells derived from simpler objects and that their descendants became more and more complicated and ordered until their evolutionary transformation into modern cells namely cells endowed with the same basic structures and mechanisms as those existing today Although the appearance of the first modern cells goes back at least two billion years many scholars believe that it occurred almost four billion years ago In that case the Earth s formation which took place quite quickly about 4 6 billion years ago is in close proximity to the origin of life There is disagreement not only about the moment of appearance of modern cells but also as to their early evolution Ideas on the first steps in cellular evolution vary considerably and our present knowledge is so limited as to be little more than vacuous Why discuss it then Precisely because it is an empty space that needs to be filled Does it make sense only to discuss things which are well known and well documented Is this the best way to interpret that spirit of exploration of the unknown which is at the very heart of scientific endeavor The idea that it is idle to venture into fields which are poorly documented has been long supported even in cases similar to those dealt with here for example the evolutionary phases which took place before the first cell
