**Practical Handbook of Spreadsheet Curves and Geometric Constructions** Deane Arganbright, 1993-08-03 Practical Handbook of Spreadsheet Curves and Geometric Constructions presents a compelling description of how to use commercially available spreadsheets to design and create high quality graphs of a variety of curves including classical curves in mathematics The book contains more than 65 models for the geometric construction of families of curves such as strophoids pedals involutes and others Models in the book are designed to be interactive so that users can experiment with them to produce eye catching curves designs and patterns Examples come from calculus parametric equations constructions of classical families and graphs of conformal mappings of a complex variable The author a leading authority on spreadsheets presents innovative techniques for using spreadsheet graphing to generate large families of lines and circles that describe various curves as envelopes of the families The final chapter of the book discusses the use of commercial spreadsheets to create animation effects The book is heavily illustrated with more than 200 graphs and 60 tables An accompanying 3 5 disk provides 25 selected examples written in Quattro Pro 2 0 Lotus 1 2 3 2 3 and Microsoft Excel 4 0 Designed for both experienced and novice spreadsheet users Practical Handbook of Spreadsheet Curves and Geometric Constructions will be an invaluable resource for mathematicians engineers scientists and computer scientists The book will also benefit professional artists and designers interested in learning new techniques for producing mathematical curves using

spreadsheet software      Adventures in Problem Solving S. Shirali,2002-10      *Elementary Mathematical and Computational Tools for Electrical and Computer Engineers Using MATLAB* Jamal T. Manassah,2017-12-19 Engineers around the world depend on MATLAB for its power usability and outstanding graphics capabilities Yet too often engineering students are either left on their own to acquire the background they need to use MATLAB or they must learn the program concurrently within an advanced course Both of these options delay students from solving realistic design problems especially when they do not have a text focused on applications relevant to their field and written at the appropriate level of mathematics Ideal for use as a short course textbook and for self study *Elementary Mathematical and Computational Tools for Electrical and Computer Engineers Using MATLAB* fills that gap Accessible after just one semester of calculus it introduces the many practical analytical and numerical tools that are essential to success both in future studies and in professional life Sharply focused on the needs of the electrical and computer engineering communities the text provides a wealth of relevant exercises and design problems Changes in MATLAB s version 6 0 are included in a special addendum The lack of skills in fundamental quantitative tools can seriously impede progress in one s engineering studies or career By working through this text either in a lecture lab environment or by themselves readers will not only begin mastering MATLAB but they will also hone their analytical and computational skills to a level that will help them to enjoy and succeed in subsequent electrical and computer engineering pursuits      Theory of Distances in NeutroGeometry ,2024-01-01 NeutroGeometry is one of the most recent approaches to geometry In NeutroGeometry mod els the main condition is to satisfy an axiom definition property operator and so on that is neither entirely true nor entirely false When one of these concepts is not satisfied at all it is called AntiGeometry One of the problems that this new theory has had is the scarcity of models Another open problem is the definition of angle and distance measurements within the framework of NeutroGeometry This paper aims to introduce a general theory of distance measures in any NeutroGeometry We also present an algorithm for distance measurement in real life problems      Similarity Measures for Face Recognition Enrico Vezzetti ,Federica Marcolin,2015-04-27 Face recognition has several applications including security such as authentication and identification of device users and criminal suspects and in medicine corrective surgery and diagnosis Facial recognition programs rely on algorithms that can compare and compute the similarity between two sets of images This eBook explains some of the similarity measures used in facial recognition systems in a single volume Readers will learn about various measures including Minkowski distances Mahalanobis distances Hansdorff distances cosine based distances among other methods The book also summarizes errors that may occur in face recognition methods Computer scientists facing face and looking to select and test different methods of computing similarities will benefit from this book The book is also useful tool for students undertaking computer vision courses      *Thinking Geometrically* Thomas Q. Sibley,2015-08-14 *Thinking Geometrically* A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics

majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid s first book and a high school axiomatic system as well as Hilbert s axioms Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing dynamical geometry software without being tied to any particular software      **Nonlinear Differential Equations** Raimond A.

Struble,2018-01-16 Detailed treatment covers existence and uniqueness of a solution of the initial value problem properties of solutions properties of linear systems stability of nonlinear systems and two dimensional systems 1962 edition

**Computational Mind: A Complex Dynamics Perspective** Vladimir G. Ivancevic,Tijana T. Ivancevic,2007-06-12 This is a graduate level monographic textbook in the field of Computational Intelligence It presents a modern dynamical theory of the computational mind combining cognitive psychology artificial and computational intelligence and chaos theory with quantum consciousness and computation The book introduces to human and computational mind comparing and contrasting main themes of cognitive psychology artificial and computational intelligence      **X and the City** John Adam,2013-12 What mathematical modeling uncovers about life in the city X and the City a book of diverse and accessible math based topics uses basic modeling to explore a wide range of entertaining questions about urban life How do you estimate the number of dental or doctor s offices gas stations restaurants or movie theaters in a city of a given size How can mathematics be used to maximize traffic flow through tunnels Can you predict whether a traffic light will stay green long enough for you to cross the intersection And what is the likelihood that your city will be hit by an asteroid Every math problem and equation in this book tells a story and examples are explained throughout in an informal and witty style The level of mathematics ranges from precalculus through calculus to some differential equations and any reader with knowledge of elementary calculus will be able to follow the materials with ease There are also some more challenging problems sprinkled in for the more advanced reader Filled with interesting and unusual observations about how cities work X and the City shows how mathematics undergirds and plays an important part in the metropolitan landscape      **Math in Drag** Kyne Santos,2024-03-05 This work

subverts a dull image of mathematics showing us how math can sparkle and sashay and transforming the way we think about numbers

**Selected Papers in Logic and Foundations, Didactics, Economics** Karl Menger, 2012-12-06 This volume brings together those papers of mine which may be of interest not only to various specialists but also to philosophers Many of my writings in mathematics were motivated by epistemological considerations some papers originated in the critique of certain views that at one time dominated the discussions of the Vienna Circle others grew out of problems in teaching fundamental ideas of mathematics still others were occasioned by personal relations with economists Hence a wide range of subjects will be discussed epistemology logic basic concepts of pure and applied mathematics philosophical ideas resulting from geometric studies mathematical didactics and finally economics The papers also span a period of more than fifty years What unifies the various parts of the book is the spirit of searching for the clarification of basic concepts and methods and of articulating hidden ideas and tacit procedures Part 1 includes papers published about 1930 which expound an idea that Carnap after a short period of opposition in the Circle fully adopted and under the name Principle of Tolerance he eloquently formulated it in great generality in his book *Logical Syntax of Language* 1934 through which it was widely disseminated The New Logic in Chapter 1 furthermore includes the first report 1932 to a larger public of Gödel's epochal discovery presented among the great logic results of all time Chapter 2 is a translation of an often quoted 1930 paper presenting a detailed exposition and critique of intuitionism

[Joe Celko's SQL for Smarties](#) Joe Celko, 2014-12-05 SQL for Smarties was hailed as the first book devoted explicitly to the advanced techniques needed to transform an experienced SQL programmer into an expert Now 20 years later and in its fifth edition this classic reference still reigns supreme as the only book written by a SQL master that teaches programmers and practitioners to become SQL masters themselves These are not just tips and techniques also offered are the best solutions to old and new challenges Joe Celko conveys the way you need to think in order to get the most out of SQL programming efforts for both correctness and performance New to the fifth edition Joe features new examples to reflect the ANSI ISO Standards so anyone can use it He also updates data element names to meet new ISO 11179 rules with the same experience based teaching style that made the previous editions the classics they are today You will learn new ways to write common queries such as finding coverings partitions runs in data auctions and inventory relational divisions and so forth SQL for Smarties explains some of the principles of SQL programming as well as the code A new chapter discusses design flaws in DDL such as attribute splitting non normal form redundancies and tiddling There is a look at the traditional acid versus base transaction models now popular in NoSQL products You'll learn about computed columns and the DEFERRABLE options in constraints An overview of the bi-temporal model is new to this edition and there is a longer discussion about descriptive statistic aggregate functions The book finishes with an overview of SQL PSM that is applicable to proprietary 4GL vendor extensions New to the 5th Edition Overview of the bitemporal model Extended coverage of descriptive statistic aggregate functions New chapter covers flaws in DDL Examination of traditional acid versus

base transaction models Reorganized to help you navigate related topics with ease Expert advice from a noted SQL authority and award winning columnist Joe Celko who served on the ANSI SQL standards committee for over a decade Teaches scores of advanced techniques that can be used with any product in any SQL environment whether it is SQL 92 or SQL 2011 Offers tips for working around deficiencies and gives insight into real world challenges **Neutrosophic Sets and Systems, vol. 67/2024** Florentin Smarandache, Mohamed Abdel-Basset, Said Broumi, 2024-05-01 Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc Neutrosophy is a new branch of philosophy that studies the origin nature and scope of neutralities as well as their interactions with different ideational spectra This theory considers every notion or idea together with its opposite or negation and with their spectrum of neutralities in between them i e notions or ideas supporting neither nor The and ideas together are referred to as Neutrosophy is a generalization of Hegel s dialectics the last one is based on and only According to this theory every idea tends to be neutralized and balanced by and ideas as a state of equilibrium In a classical way are disjoint two by two But since in many cases the borders between notions are vague imprecise Sorites it is possible that and of course have common parts two by two or even all three of them as well
