Anthony, 2003-09-18 Conservation of mammals in the coniferous forests of western North America has shifted in recent years from species based strategies to community and ecosystem based strategies resulting in an increase in the available information on mammalian communities and their management This book provides a synthesis of the published literature on the role of forest mammals in community structure and function with emphasis on their management and conservation In addition to coverage of some of the charismatic megafauna such as grizzly bears gray wolves mountain lions elk and moose the book also provides a thorough treatment of small terrestrial mammals arboreal rodents bats medium sized carnivores and ungulates The unique blend of theoretical and practical concepts makes this book equally suitable for managers educators and research biologists who will find it a valuable reference to the recent literature on a vast array of topics on mammalian ecology *Grand Teton National Park (N.P.), Bison and Elk Management Plan* , 2005 *Sustaining Young Forest Communities* Cathryn Greenberg, Beverly Collins, Frank Thompson III, 2011-08-03 This edited volume addresses a rising concern among natural resource scientists and management professionals about decline of the many plant and animal species associated with early successional habitats especially within the Central Hardwood Region of the USA These open habitats with herbaceous shrub or young forest cover are disappearing as abandoned farmland pastures and cleared forest patches return to forest There are many questions about why what where and how to manage for early successional habitats In this book expert scientists and experienced land managers synthesize knowledge and original scientific work to address questions on such topics as wildlife water carbon sequestration natural versus managed disturbance future scenarios and sustainable creation and management of early successional habitat in a landscape context

Forests and Society Kristiina A. Vogt, 2007 This book which contains 8 chapters provides a framework for the general public forest managers and policy makers to understand what factors need to be included when working towards using and protecting the world's forests so that they can be sustained Topics covered include historical perceptions and use of forests the creation of today's forest landscapes by global societies decision making related to forests becoming democratic and globalized changing views about the ecology and conservation of forests the historical and continuing impacts of human disturbances i.e. air pollution climatic change salt injury introduced plants introduced insects introduced pathogens forest management activities and wars on forests the relevance of natural disturbances i.e. wildfires wind extreme temperature and moisture volcanic eruptions pathogens and insect and vertebrate pests in maintaining sustainable forests the relationship of human health to forest management and the relationship among forests humans and the carbon cycle Case studies from Australia Bolivia Botswana China Iceland India Indonesia Mexico Nepal Peru the Philippines Puerto Rico and the USA are also included

Land Condition Trend Analysis Avian Database: Ecological Guild-based Summaries, 1998 Land Condition Trend Analysis LCTA bird database documentation capabilities often are limited to the generation of installation wide species checklists estimates of relative abundance and evidence of breeding activity The conservation and characterization of biological diversity is becoming a management objective of both governmental and private organizations and as such more ecologically descriptive summaries are being required Ecological guild analyses have been proposed as a means to link wildlife to a specific biodiversity component and thus represents an option to military trainers in evaluating impacts to wildlife communities This report documents an LCTA database update that provides selected ecological attributes particularly for the nesting season for 676 bird species occurring within the continental United States This database upgrade provides land managers the capability to 1 generate ecological guild based summaries with no additional fieldwork 2 identify specific groups of birds most likely to be impacted by a spatially discrete training impact 3 customize the local database by adjusting individual attributes for species specific to the installation and 4 conveniently cross reference or simply convert all LCTA species codes to more globally recognized American Ornithological Union AOU numbers or the Bird Banding Laboratories Alpha codes
