Consortium CCE-CNMA, 2013-11-11 Today's manufacturing environment is characterised by significant change in the way it is able to respond to its business objectives Companies now face new challenges to meet customer demands including greater flexibility a wider range of products higher quality improved lead time whilst maintaining competitive prices The changes manifest in each company will differ but the trend is towards providing a leaner more responsive organisation This is reflected in the need for Information Technology IT systems to be more integrated across an enterprise and for the systems to be provided on a distributed basis At the same time it is imperative that the costs associated with these IT systems and the range of skills required by an enterprise to develop and support such systems should be minimal One way of achieving this objective is to adopt the use of standards During recent years there has been a lot of activity to standardise the way that manufacturing devices communicate with each other Considerable progress has been made thanks not least to the success of the international effort of standardisation bodies like ISO IEEE and IEC and projects applying standardised protocols like Manufacturing Automation Protocol MAP in the USA Communications Network for Manufacturing Applications CNMA in Europe and not forgetting Mini MAP and Fieldbus technology

Object-Oriented Programming Günther Blaschek, 2012-12-06

Object oriented programming is a popular buzzword these days What is the reason for this popularity Is object oriented programming the solution to the software crisis or is it just a fad Is it a simple evolutionary step or a radical change in software methodology What is the central idea behind object oriented design Are there special applications for which object oriented programming is particularly suited Which object oriented language should be used There is no simple answer to these questions Although object oriented programming was invented more than twenty years ago we still cannot claim that we know everything about this programming technique Many new concepts have been developed during the past decade and new applications and implications of object oriented programming are constantly

being discovered This book can only try to explain the nature of object oriented program ming in as much detail as possible It should serve three purposes First it is intended as an introduction to the basic concepts of object oriented program ming Second the book describes the concept of prototypes and explains why and how they can improve the way in which object oriented programs are developed Third it introduces the programming language Omega an object oriented language that was designed with easy safe and efficient software development in mind Inventing Software Kenneth Nichols,1998-04-16 Since the introduction of personal computers software has emerged as a driving force in the global economy and a major industry in its own right During this time the U S government has reversed its prior policy against software patents and is now issuing thousands of such patents each year provoking heated controversy among programmers lawyers scholars and software companies This book is the first to step outside of the highly polarized debate and examine the current state of the law its suitability to the realities of software development and its implications for day to day software development Written by a former lawyer and working software developer Inventing Software provides a comprehensive overview of software patents from the lofty perspectives of legal history and computing theory to the technical details and issues of actual patents People interested in the legal aspect of software patents will find detailed technical analysis of actual patented software the legal strategies behind the wording of the patents and an analysis of the ease or difficulty of detecting infringements Software developers will find ways to integrate patent planning into their standard software engineering practices and a practical guide for studying and appraising their competitors patents and safeguarding the value of their own Intended primarily for programmers and software industry executives and managers Inventing Software will also be useful illuminating reading for attorneys and software company investors
