Taste & smell

Most of our special senses are chemoreception systems: gustation (taste) and olfaction (smell). The degree to which we can respond to taste or olfaction, thereby using smell and taste to control olfactory receptor cells that respond to molecules dissolved in fluid (taste) and solid (smell). The sense of taste is less discriminatory than the sense of smell, and there is an overlap between taste receptors. The sense of smell is highly discriminatory, with several types of olfactory receptors, each responding to particular odors. Taste and olfaction are related to smell, vision and hearing, important with the sense of taste, vision, but taste is particularly affected by the sense of smell.

Concentrations

Taste receptors vary depending on the concentration of the substance in a given solution or solid. For low concentrations, taste is not as salty, sweet, sour, or bitter as higher concentrations.

Gustation

Gustation, the sense of taste, gives us information about the food and drink that we consume. Taste buds on the primary gustatory organ, the tongue, contain chemoreceptor cells called gustatory cells. These taste buds have four basic tastes: sweet, sour, bitter and salty. A fifth taste, umami, is the taste of glutamate, an amino acid. This taste is associated with proteins, as in aged cheese or meat broth.

The taste bud

Taste buds, structures that produce taste, have taste receptor molecules on the surface of the tongue. The resulting receptor potential sends to the brain via the gustatory nerve, where the signal is chemically transmitted to the brain via the gustatory nerve. Gustatory cells are replaced by new cells generated from basal cells at the base of the taste buds.

Olfaction

The sense of smell is called olfaction, or the detection of odors. Olfaction depends on specialized chemical receptors, or chemoreceptors, located within the olfactory epithelium. These receptors are designed to respond to small amounts of an odorant, a molecule that can be smelled. The brain integrates the input from several different receptors to identify a particular odor. Humans can detect about 10,000 odors.

As air flows through the nose, the odors across the nasal cavity pass through the olfactory epithelium, bringing odorant molecules into contact with the olfactory nerve, leading to the ability to detect odors by increasing the release of an impulse, which can activate the neurons of the brain.

Olfactory receptors

Olfactory receptors

Olfactory receptors in the nasal cavity are produced by the olfactory epithelium, then travel to receptor molecules on the olfactory cilia. The receptor potential that is generated sends along the axon to the olfactory bulb, which sends the signal to the higher brain centers. Unlike other senses, the olfactory receptors are connected directly to the cerebral cortex, rather than through the thalamus in the midbrain.

Compound sweet and salty tastes, we are left with more sensitive to bitter compounds, and about 1,000 taste buds are sensitive to salty tastes. The taste buds are located in the tongue, where they can taste the food and drink we consume. Typically, an adult has more than 10,000 taste buds, but the number declines as we age.

The synapse

Neurons communicate with other cells at a synapse, the site of a nerve impulse transmission. The space between the presynaptic, or sending, neuron and the postsynaptic, or receiving, cell is called the synaptic cleft. An impulse enters at the tip of the axon, the terminal button, where "messenger" molecules called neurotransmitters. These highly specialized chemicals carry nerve impulses from the presynaptic cell to the postsynaptic cell, where they bind to receptors on the postsynaptic cell, which then activate the postsynaptic cell.

Smell And Taste:

Taste and Smell Disorders Allen M. Seiden, 1997 Approximately two million Americans suffer from taste and smell disorders. This much needed book provides complete information on the pathophysiology, anatomy, biochemistry, patient evaluation, and treatment of chemosensory disorders. More than a dozen new topics are covered including *Taste and Smell* Thomas Hummel, Antje Welge-Lüssen, 2006 Chemosensory dysfunction is a quite frequently occurring problem which significantly affects the patient's quality of life. It can result from infectious agents, environmental factors, toxins, traumatic brain injuries, as well as neurodegenerative diseases. This publication provides up to date articles on the chemical senses including the olfactory, trigeminal, and gustatory systems. The vomeronasal system and its potential significance in humans is also discussed. Based on recent functional imaging data, the book provides an overview on how the lower senses function, how they work together, for example, to produce flavor, how they can be damaged and repaired, and how the function of human chemical senses can be assessed. The publication focuses on chemosensory dysfunction and pays particular attention to taste and its disorders. Renowned experts in their fields of research have contributed their findings to this topical update on chemosensory disorders and made this volume indispensable reading for otorhinolaryngologists and neurologists. **Olfaction, Taste, and Cognition** Catherine Rouby, Benoist Schaal, Danièle Dubois, Rémi Gervais, A. Holley, 2002-10-28 The human organs of perception are constantly bombarded with chemicals from the environment. Our bodies have in turn developed complex processing systems which manifest themselves in our emotions, memory, and language. Yet the available data on the high order cognitive implications of taste and smell are scattered among journals in many fields with no single source synthesizing the large body of knowledge, much of which has appeared in the last decade. This book presents the first multidisciplinary synthesis of the literature in olfactory and gustatory cognition. Leading experts have written chapters on many facets of taste and smell including odor memory, cortical representations, psychophysics, and functional imaging studies, genetic variation in taste, and the hedonistic dimensions of odors. The approach is integrative, combining perspectives from neuroscience, psychology, anthropology, philosophy, and linguistics, and is appropriate for students and researchers in all of these areas who seek an authoritative reference on olfaction, taste, and cognition. Navigating Smell and Taste Disorders Dr. Ronald DeVere, MD, Marjorie Calvert, 2010-08-03 Demos Health and the American Academy of Neurology Present a New Book for Patients with Smell and Taste Disorders. Over 200,000 people visit doctors each year for smell and taste problems. Since our ability to smell and taste decreases with age, up to 14 million Americans aged 55 and older may live with these disorders undiagnosed. Smell and taste disorders affect a person's ability to enjoy food and drink and may result in decreased appetite, weight loss, and too much added sugar and salt in the diet. In severe cases, they may lead to depression. Smell and taste problems can also interfere with personal safety, limiting the ability to notice smoke and potentially harmful chemicals and gases. *Navigating Smell and Taste Disorders* is a unique collaboration between a doctor and a food consultant that both

addresses the subject of smell and taste loss and provides food preparation tips and a special recipe section that will appeal to other senses and make food attractive again This is a must have reference book for all those living with smell and taste disorders The book covers the whole disorder including How smell and taste work Causes of smell and taste problems Treatments What you can expect when you visit a specialist Recipes that will appeal to other senses and make food attractive again First person accounts of coping with this disorder Navigating Smell and Taste Disorders is the inaugural book in the series Neurology Now Books from the American Academy of Neurology Inspired by Neurology Now the AAN s leading neurologic patient information magazine Neurology Now Books are written from a multidisciplinary approach combining the expertise of a neurologist with other related experts and patients and caregivers Each volume will provide the reader with the most up to date information answers to questions and concerns and first person accounts of others who are living with a neurologic disorder *Smelling and Tasting* Alvin Silverstein, Virginia B. Silverstein, Laura Silverstein Nunn, 2002-01-01

Hawkes, 2002 This practical brief guide to diagnosing and treating causes of disorders of smell and taste is the only accessible handbook available for non experts Signs of problems with these two senses may be ignored by the patient or downplayed by the physician but the disruption of the senses may be a first sign of serious illness The wide range of conditions responsible for disorders of smell and taste make it difficult to determine the single underlying cause and to decide upon the best possible plan of treatment Disorders of Smell and Taste will help physicians manage some of these patients thereby minimizing references to specialists The only accessible handbook available for the non expert Pocket sized guide provides easy access for clinicians Practical and brief this handbook aids physicians in the diagnosis and treatment of sense disorders **Smell and Taste Disorders** Christopher H.
