Biotic Interactions in Plant-pathogen Associations Michael J. Jeger,N. J. Spence,2001 Annotation Based on a similarly named meeting in December 1999 organised by the British Society for Plant Pathology this book considers the biology of interactions between host plants and the pathogens that infect them This important topic has seen some significant advances in the past ten years especially through the application of molecular techniques which are extensively covered in this book *Latvijas Zinātņu akadēmijas vēstis* ,1995 *Higher Plant Cell Respiration* R. Douce,D.A. Day,2012-12-06 I am honored by the editor s invitation to write a Preface for this volume As a member of an older generation of plant physiologists my lineage in plant respiration traces back to F F BLACKMAN through the privilege of having M THOMAS and W O JAMES two of his students as my mentors How the subject has changed in 40 years In those dark ages B 14C most of the information available was hard won from long term experiments using the input output approach Respiratory changes in response to treatments were measured by laborious gas analysis or by titration of alkali from masses of Pettenkofer tubes the Warburg respir ometer was just beginning to be used for plant studies by pioneers such as TURNER and ROBERTSON Nevertheless the classical experiments of BLACKMAN with apples had led to important results on the relations between anaerobic and aerobic carbohydrate utilization and on the climacteric and to the

first explicit concept of respiratory control of respiration imposed by the organization resistance of cell structure THOMAS extended this approach in his investigations of the Pasteur effect and the induction of aerobic fermentation by poisons such as cyanide and high concentrations of CO JAMES began a long 2 series of studies of the partial reactions of respiration in extracts from barley and YEMM S detailed analysis of carbohydrate components in relation to respiratory changes added an important new dimension
