Making Sense of Health, Disease, and the Environment in Cross-Cultural History: The Arabic-Islamic World, China, Europe, and North America

Florence Bretelle-Establet, Marie Gaille, Mehrnaz Katouzian-Safadi, 2020-01-01 This book has been defined around three important issues the first sheds light on how people in various philosophical religious and political contexts understand the natural environment and how the relationship between the environment and the body is perceived the second focuses on the perceptions that a particular natural environment is good or bad for human health and examines the reasons behind such characterizations the third examines the promotion in history of specific practices to take advantage of the health benefits or avoid the harm caused by certain environments and also efforts made to change environments supposed to be harmful to human health The feeling and or the observation that the natural environment can have effects on human health have been and are still commonly shared throughout the world This led us to raise the issue of the links observed and believed to exist between human beings and the natural environment in a broad chronological and geographical framework In this investigation we bring the reader from ancient and late imperial China to the medieval Arab world up to medieval modern and contemporary Europe This book does not examine these relationships through the prism of the knowledge of our modern contemporary European experience which still too often leads to the feeling of totally different worlds Rather it questions protagonists who in different times and in different places have reflected on their own terms on the links between environment and health and tries to obtain a better understanding of why these links took the form they did in these precise

contexts This book targets an academic readership as well as an informed audience for whom present issues of environment and health can be nourished by the reflections of the past *The Story of the Human Body* Daniel E. Ecosickness in Contemporary U.S. Fiction Heather Houser, 2014-06-03. The 1970s brought a new understanding of the biological and intellectual impact of environmental crises on human beings. As efforts to prevent ecological and bodily injury aligned, a new literature of sickness emerged. Ecosickness fiction imaginatively rethinks the link between these forms of threat and the sick body to bring readers to environmental consciousness. Tracing the development of ecosickness through a compelling archive of contemporary U.S. novels and memoirs, Ecosickness in Contemporary U.S. Fiction establishes that we cannot comprehend environmental and medical dilemmas through data alone and must call on the sometimes surprising emotions that literary metaphors, tropes and narratives deploy. In chapters on David Foster Wallace, Richard Powers, Leslie Marmon Silko, Marge Piercy, Jan Zita Grover and David Wojnarowicz, Heather Houser shows how narrative affects such as wonder and disgust organize perception of an endangered world and orient us ethically toward it. The study builds the connective tissue between contemporary literature, ecocriticism, affect studies and the medical humanities. It also positions ecosickness fiction relative to emergent forms of environmentalism and technoscientific innovations such as regenerative medicine and alternative ecosystems. Houser models an approach to contemporary fiction as a laboratory for affective changes that spark or squelch ethical projects.
