Adult Crying Ad J.J.M. Vingerhoets, Randolph R. Cornelius, 2012-12-06 Crying is a typical human expression of emotion Surprisingly until now little scientific attention has been devoted to this phenomenon Many textbooks on emotion fail to pay attention to it and in scientific journals there are hardly any contributions focusing on this behavior In contrast there is much interest from the lay public allowing pseudo scientists to formulate theories that have little or no scientific basis Is there any evidence in support of statements that crying is healthy or that not crying may result in toxification How do people react to the crying of others Is crying important for the diagnosis of depression and if so how This book aims to fill this gap in scientific literature Crying is discussed from several perspectives and specific attention is given to methodological issues and assessment Each chapter provides a review and a summary of the relevant scientific

literature Biology and Emotion Neil McNaughton, 1989-07-13 There have been rapid and important advances in all behavioural sciences in recent years These advances have in one sense been very diverse and specialised sufficiently so for a scientist to quickly lose touch with the current concerns of even neighbouring researches but in some cases the developments have seemed also to be fundamental and perhaps convergent with implications across a range of disciplines In either case there is a real and increasing need for scientists to communicate their discoveries and to a new generation of students in their own Problems in the Behavioural Sciences is designed to meet this need The books are by leading researchers and deal with problems or topics that are attracting a special current interest The central subject matter is psychology but many of the issues will need to be pursued across existing and fluid boundaries between psychology and other behavioural sciences like physiology pharmacology sociology ethology and linguistics The central idea of this book is that biology and particularly evolution provides the best starting point for the study of emotion In particular it is argued that all the conventional properties of emotion such as expression feeling and motivation can be considered in a scientific manner and useful conclusions drawn therefrom The major part of the book involves the application of this central idea to a wide variety of the phenomena of emotion The resultant review should be useful as an undergraduate text and so explanations in the text are aimed at the non specialist At the same time the specific conclusions drawn in the book should be of interest to all those who do research on emotion and particularly those who need a solid framework on which to base interdisciplinary studies Biology and Emotion differs from the majority of books in the field in that it does not present a specific theory of emotion The material covered is therefore more general than is often the case and has not been selected to support a particular point of view It combines an organised yet artheoretical approach with coverage of both animal and human emotions **The Endocrine Role of the Musculoskeletal System** Giuseppina Storlino, Sandeep Kumar, Siyi

Zhu, 2025-02-05 Due to their anatomical proximity muscle and bone tissues are closely related with communication between the two tissues occurring through both physical and molecular mechanisms Bone and muscle are endocrine organs in that both produce hormone like molecules influencing both each other and other distant tissues The molecular communication between these two tissues constitutes a fundamental crosstalk Various osteokines and myokines are involved in physiological mechanisms in bone and muscle as well as in numerous other organs Numerous in vivo and in vitro models have been developed over the years to clarify these mechanisms A significant amount remains to be discovered about the endocrine role of the skeletal muscle system under physiological and pathological conditions **Everyday Beliefs about Emotion: Their Role in Subjective Experience, Emotion as an Interpersonal Process, and Emotion Theory** Stephanie A.
