Transformation - A Fundamental Idea of Mathematics Education Sebastian Rezat, Mathias Hattermann, Andrea Peter-Koop, 2013-12-13 The diversity of research domains and theories in the field of mathematics education has been a permanent subject of discussions from the origins of the discipline up to the present On the one hand the diversity is regarded as a resource for rich scientific development on the other hand it gives rise to the often repeated criticism of the discipline's lack of focus and identity As one way of focusing on core issues of the discipline the book seeks to open up a discussion about fundamental ideas in the field of mathematics education that permeate different research domains and perspectives The book addresses transformation as one fundamental idea in mathematics education and examines it from different perspectives Transformations are related to knowledge related to signs and representations of mathematics related to concepts and ideas and related to instruments for the learning of mathematics The book seeks to answer the following questions What do we know about transformations in the different domains What kinds of transformations are crucial How is transformation in each case conceptualized

Inequality in Key Skills of City Youth Stephen Lamb, Russell W. Rumberger, 2024-01-01 This groundbreaking research volume addresses the topic of educational inequality from a global perspective It includes 16 chapters from an

international group of scholars who examine how well city school systems from around the world are preparing young people particularly poor and minority students with the skills they will need for further study work and life overall While skills in key domains such as science math language and civics have been center stage in international comparisons there has been growing recognition of the effects that education has on the development of broader sets of capabilities such as social and emotional skills also known as noncognitive or 21st century skills that can affect the success of students in school and beyond This volume aims to address the shortage of international data on the wide range of skills that students need to learn enabling researchers to compare the types and causes of educational inequality in skills within and between cities

An Idealistic Pragmatism M.B. Mahowald, 2012-12-06 When I first became acquainted with the thought of the American philosopher Josiah Royce two factors particularly intrigued me The first was Royce's claim that the notion of community was his main metaphysical tenet the second was his close association with the two American pragmatists Charles Sanders Peirce and William James Regarding the first factor I was struck by the fact that a philosopher who died in 1916 should emphasize a topic of such contemporary significance not only in philosophy but in so many other vital fields as well sociology psychology politics theology to name only a few Regarding the second I was curious as to whether the pragmatism of Peirce and James might have influenced Royce during the course of their professional and personal contacts Similarly I wondered whether the idealism of Royce might have affected the thought of Peirce and James To have appeased my curiosity in regard to all three thinkers however would have required at least three books As a start I have now appeased it in regard to one In researching the writings of Royce I found my way to the Houghton Library and to the Archives of Harvard University at Cambridge Massachusetts where the unpublished manuscripts of Royce are preserved No editing job has yet been done on this bulk of material though such would certainly be a welcome contribution to American philosophy

The Popular Science Monthly ,1879 Political Constructivism Peri Roberts,2007-10-25 Political Constructivism is concerned with the justification of principles of political justice in the face of pluralism Contemporary accounts of multiculturalism pluralism and diversity have challenged the capacity of political theory to impartially justify principles of justice beyond the boundaries of particular communities In this original account Peri Roberts argues that political constructivism defends a conception of objective and universal principles that set normative limits to justifiable political practice Political Constructivism explores this understanding in two ways Firstly by engaging with constructivist thinkers such as John Rawls and Onora O'Neill in order to lay out a basic understanding of what constructivism is Secondly the author goes on to defend a particular account of political constructivism that justifies a universal primary constructivism alongside the many secondary constructions in which we live our everyday lives In doing so he outlines an understanding of principled pluralism which accepts diversity whilst at the same time recognising its limits This volume will be of particular interest to students and researchers of political theory and political philosophy

The Argument of the Tractatus Richard McDonough,1986-06-30 The Argument of the Tractatus presents a single unified interpretation of the Tractatus based on Wittgenstein's own view that the philosophy of logic is the real foundation of his philosophical system It demonstrates that on this interpretation Wittgenstein's views are far more visionary and relevant to contemporary discussions than has been suspected A case in point is a new interpretation of Wittgenstein's theory of meaning that is shown to illuminate the views of a series of philosophers including Brentano the early Russell Chomsky Fodor Katz Kripke Malcolm and Dummett McDonough's interpretation sheds new light on the connection between Wittgenstein's work and the nineteenth and twentieth century German philosophical tradition and it facilitates a clear resolution of the controversy over the relation between Wittgenstein's own early and later philosophies The Argument of the Tractatus is an excellent introduction to the field of twentieth century analytical philosophy It treats a wide range of authors and topics including the foundations of logic the theory of meaning the disputes concerning atomistic versus holistic conceptions of
