Sir Nevill Mott 65 Years in Physics N F Mott, A S Alexandrov, 1995-08-15 This volume contains a discriminating selection of papers with commentaries by one of the most creative theoretical physicists of our century Nobel Laureate Sir Nevill Mott His pioneering contributions 1928 1993 include Fermi liquid theory metal insulator transition the theory of noncrystalline materials high temperature superconductivity and many other discoveries **Sir Nevill Mott** Sir Nevill Francis Mott, A. S. Alexandrov, 1995 This volume contains a discriminating selection of papers with commentaries by one of the most creative theoretical physicists of our century Nobel Laureate Sir Nevill Mott His pioneering contributions 1928 1993 include Fermi liquid theory metal insulator transition the theory of noncrystalline materials high temperature superconductivity and many other discoveries **Sir Nevill Mott** Sir Nevill Francis Mott, 1995 This volume contains a discriminating selection of papers with commentaries by one of the most creative theoretical physicists of our century Nobel Laureate Sir Nevill Mott His pioneering contributions 1928 1993 include Fermi liquid theory metal insulator transition the theory of noncrystalline materials high temperature superconductivity and many other discoveries Selected Papers of Kun Huang Bang-fen Zhu, 2000 Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph Dynamical Theory of Crystal Lattices During his years of active research he has made important contributions to solid state physics This collection of papers is selected at his own choice as representing his most influential works Included is his work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes later known as polariton the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation his early prediction of diffuse X ray scattering due to crystal defects and his research works on low dimensional semiconductor structures and more Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work such as background motivation and rationale involved Thus he was led to write a commentary which is published alongside the papers

Subnuclear Physics, the First 50 Years: Highlights From Erice To Eln O Barnabei, P Pupillo, Fabio Roversi Monaco, Antonino Zichichi, 2000-08-04 For the Galvani Bicentenary Celebrations the University of Bologna and its Academy of Sciences singled out subnuclear physics as the field of scientific research to be associated with this important event as it would best illustrate for the new generation of students the challenge inherent in fundamental sciences Subnuclear physics was born 50 years ago and has represented ever since the new frontiers of Galilean science In his opening lecture delivered on the first day of the new academic year Professor Antonino Zichichi analytically reviewed the basic conceptual developments and main discoveries achieved in subnuclear physics during the last 50 years Given the importance of this field of fundamental research Professor Zichichi was invited to expand the contents of his lecture into a book and the outcome is this invaluable volume **Formation And Evolution Of Black Holes In The Galaxy: Selected Papers With**

Commentary Hans A Bethe, Gerald E Brown, Chang-hwan Lee, 2003-03-04 In published papers H A Bethe and G E Brown worked out the collapse of large stars and supernova explosions They went on to evolve binaries of compact stars finding that in the standard scenario the first formed neutron star always went into a black hole in common envelope evolution C H Lee joined them in the study of black hole binaries and gamma ray bursts They found the black holes to be the fossils of the gamma ray bursts From their properties they could reconstruct features of the burst and of the accompanying hypernova explosions This invaluable book contains 23 papers on astrophysics chiefly on compact objects written over 23 years The papers are accompanied by illuminating commentary In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars and to explain why black holes are formed at relatively low masses

Creation Of Quantum Chromodynamics And The Effective Energy, The: In Honour Of A Zichichi On The Occasion Of The Galvani Bicentenary Celebrations L N Lipatov, Gabriele Veneziano, Gerard 't Hooft, Vladimir N Gribov, Victor F Weisskopf, 2001-01-03

UNDER THE SPELL OF THE GAUGE PRINCIPLE by G t Hooft The University of Bologna and its Academy of Sciences in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society celebrated in 1998 the bicentenary of a great pioneer in the field of electric phenomena Luigi Galvani the father of macroelectricity During these two centuries the physics of electric phenomena has given rise first to the Maxwell equations then to quantum electrodynamics and finally to the synthesis of all reproducible phenomena the Standard Model A cornerstone of the Standard Model is quantum chromodynamics QCD which describes the interaction between quarks and gluons in the innermost part of the structure of matter The discovery of QCD will be recalled in the future as one of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus t Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD

From the Preshower to the New Technologies

for Supercolliders Bjørn H. Wiik, 2002 In the year 2000 the city of Bologna was the European Capital for Culture For this reason the University of Bologna and its Academy of Sciences following the Guglielmo Marconi Centenary and the Luigi Galvani Bicentenary Celebrations decided to call attention to the major achievements of their most distinguished members in science and technology This invaluable volume presents a series of inventions and technological developments some thought of and directly implemented by Professor Antonino Zichichi others suggested and developed under his leadership all of them having contributed to the discovery of new particles and new phenomena in the field of subnuclear physics The book was

conceived by an eminent scientist Professor Dr Björn H Wiik Director of Germany's most prestigious physics laboratory DESY Hamburg It would not be published were it not for Professor Dr Albrecht Wagner Chairman of the DESY Board of Directors and Dr Horst Wenninger from CERN Geneva the greatest European physics laboratory

The Legacy of Leon Van Hove

Alberto Giovannini, 2000 This important volume describes the wide ranging scientific activities of Leon Van Hove through commentaries by his colleagues and a selection of his most influential papers and documents The reprinted papers are grouped by topic starting from his early work in mathematics and theoretical and statistical physics up to his very last contributions in elementary particle physics and multiparticle dynamics Van Hove's career as teacher director and science advisor in many European institutions is presented in sketches by friends and coworkers A selection of his speeches and documented thoughts on science completes the volume

Quantum Legacy, A: Seminal Papers Of Julian Schwinger Kimball

A Milton, 2000-05-25 Julian Schwinger 1918 1994 was one of the giants of 20th Century science He contributed to a broad range of topics in theoretical physics ranging from classical electrodynamics to quantum mechanics from nuclear physics through quantum electrodynamics to the general theory of quantum fields Although his mathematical prowess was legendary he was fundamentally a phenomenologist He received many awards including the first Einstein Prize in 1951 and the Nobel Prize in 1965 which he shared with Richard Feynman and Sin-itiro Tomonaga for the self-consistent formulation of quantum electrodynamics into a practical theory His more than 70 doctoral students have played a decisive role in the development of science in the second half of this century This important volume includes many of Schwinger's most important papers on the above and other topics such as the theory of angular momentum and the theory of many body systems The papers collected here continue to underlie much of the work done by theoretical physicists today

Selected Papers Of Richard Feynman

(With Commentary) Laurie M Brown, 2000-10-25 These scientific papers of Richard Feynman are renowned for their brilliant content and the author's striking original style They are grouped by topic path integral approach to the foundations of quantum mechanics and quantum field theory renormalized quantum electrodynamics theory of superfluid liquid helium theory of the Fermi interaction polarons gravitation partons computer theory etc Comments on Feynman's topics are provided by the editor together with biographical notes and a complete bibliography of Feynman's publications
