In addition to presenting updates on the UN small arms process and the top arms importers and exporters, the volume assesses how recent technological developments affect weapons marking, record keeping and tracing, reviews small arms flows to Egypt, Libya and Syria and evaluates a stockpile management initiative in south east Europe. The armed actors section sheds light on the arms and ammunition used by insurgents in northern Mali, the decline of the Forces Démocratiques de Libération du Rwanda and the use of floating armouries by private security companies in the Indian Ocean. This edition also analyses conditions that are driving young people to adopt high risk coping strategies in Burundi.

*Security and Post-Conflict Reconstruction* Robert Muggah, 2008-11-04 This book provides a critical analysis of the changing discourse and practice of post conflict security promoting interventions since the Cold War such as disarmament, demobilization and reintegration (DDR) and security sector reform (SSR). Although the international aid and security sectors exhibit an expanding appetite for peace support operations in the 21st Century, the effectiveness of such interventions are largely untested. This book aims to fill this evidentiary gap and issues a challenge to conventional approaches to security promotion as currently conceived by military and peace keeping forces drawing on cutting edge statistical and qualitative findings from war torn areas including Afghanistan, Timor-Leste, Sudan, Uganda, Colombia and Haiti. By focusing on specific cases where the United Nations and others have sought to contain the presumed sources of post conflict violence and insecurity, it lays out a new research agenda for measuring success or failure. This book will be of much interest to students of peacebuilding, peacekeeping, conflict resolution, conflict and development and security studies in general.

**Non-Traditional Security in Asia** Mely Caballero-Anthony, Alistair D.B. Cook, 2013 Non Traditional Security in Asia examines the critical security challenges faced by states and societies in Asia including health, food, water, natural disasters, internal conflict, forced migration, energy, transnational crime and cyber security. Through the development of a comprehensive analytical framework that establishes the key ingredients to policy evaluation, the editors draw on a wide variety of experts to collaborate in investigating these crucial issues. This inclusive framework ensures that all voices are heard, including those oftentimes under represented and marginalized in society, to ensure that academic and policy debates are well informed about the often complex and nuanced nature of these non traditional security challenges. Through an investigation into these specific non traditional security threats, Non Traditional Security in Asia documents and evaluates many of the most pressing challenges faced by Asia today. The authors analyse the ways in which

particular issues are addressed by the many stakeholders involved in the policy making process both within governments and across societies. The question of how these challenges are addressed across and between the different levels of global governance highlights the strengths and weakness that are directly attributable to policy successes and failures. It is through this layered and comprehensive approach together with an evaluation of the role of stakeholders which binds together the chapter contributions to this collection. The book undertakes an issue specific chapter study of how Asian states and societies address these non traditional security concerns from environmental adaptation and mitigation measures to conflict resolution. For each issue area it identifies and explains the concerns of various policy communities identifying the motivations behind some of the key decisions made to affect change or stabilize the status quo. Essentially it questions not only what a security issue is but also for whom the issue is important and the interaction this has with policy outcomes. With a focus on regional and global institutions as well as national and local ones this collection illustrates the variety of stakeholders involved in non traditional security concerns and reflects on their relative importance in the decision making process. Through a systematic evaluation of these non traditional security issues by employing a comprehensive analytical framework critical appreciation of the dynamics of the policy making process surrounding issues of crucial national regional and international significance in Asia are made. As a result of sharing these insights the contributors provide the tools as well as a selection of issue specific stakeholders to illuminate the key but complex characteristics of non traditional security in Asia.

**Peace Operations and Organized Crime** James Cockayne, Adam Lupel, 2011-05-10 Peace operations are increasingly on the front line in the international community's fight against organized crime. This book explores how in some cases peace operations and organized crime are clear enemies while in others they may become tacit allies. The threat posed by organized crime to international and human security has become a matter of considerable strategic concern for national and international decision makers so it is somewhat surprising how little thought has been devoted to addressing the complex relationship between organized crime and peace operations. This volume addresses this gap questioning the emerging orthodoxy that portrays organized crime as an external threat to the liberal peace championed by western and allied states and delivered through peace operations. Based upon a series of case studies it concludes that organized crime is both a potential enemy and a potential ally of peace operations and it argues for the need to distinguish between strategies to contain organized crime and strategies to transform the political economies in which it flourishes. The editors argue for the development of intelligent transnational and transitional law enforcement that can make the most of organized crime as a potential ally for transforming political economies while at the same time containing the threat it presents as an enemy to building effective and responsible states. The book will be of great interest to students of peacebuilding, peace and conflict studies, organized crime, Security Studies and IR in general.
