The Human Use Of The Earth:

The Human Use of the Earth Philip Laurence Wagner,1960 *The Human Use of the Earth* Philip L. Wagner,1964

Economics for the Wilds Edward B. Barbier,Timothy M. Swanson,2019-09-18 Originally published in 1992 Economics for the Wilds argues that an economics that properly values the resources of the wilds offers the best long term security for their future Most of the world s wilds have in fact always been utilized by local societies who have managed their resources sustainably and one important guarantee for their preservation is therefore the continued participation of those communities and an adequate reward to them for their management The book looks at the complexity and global nature of the issues at the application of economics to the wilds and at the policies for their conservation and sustainable management which then result It also examines specific forms of utilization of wild species and habitats both sustainable and unsustainable and including community based development tourism the use of rainforest products poaching and the impact of conservation on wildlife use The book concludes that a comprehensive utilization strategy for wild resources is needed to ensure their continued existence and the continued flow of benefits from them Human Uses of Outer Space Melissa de Zwart,Stacey Henderson,John Culton,Deborah Turnbull,Amit Srivastava,2023-01-25 This book takes a unique interdisciplinary approach to the planned return of humans to the Moon With the Artemis Project the US and its partners have planned an ambitious project with the creation of the Lunar Gateway to be followed by the landing of the first woman and next man on the Moon This book explains that the Artemis project then forms the basis of planned sustained human missions to Mars Russia and China have also announced their intentions to establish a permanent base on the Moon and have commenced the deployment of modules which will form part of this project This book states that whilst there has been a permanent human presence in Low Earth Orbit since 2000 with the continued crew rotation on the International Space Station perhaps the most successful international collaboration of modern times the establishment of a base on the Moon will generate new challenges for human survival and success The continued human presence on the space station has provided an incredible opportunity to observe and study the effect of being in space upon the human body and the human psyche In addition this book explores that it has provided the scope and context for a vast range of scientific experiments Now that it has become likely that more humans will need to live and work in space for sustained periods of time it is essential that we consider matters beyond the engineering questions of how we go to space to the broader questions of how we will live there What will we need What will the effects of sustained living in space be for us emotionally cognitively physically and how do we need to consider the impact we will have on the environment to which we are travelling This book is unique in that not only does it bring together a diverse yet complementary set of expertise but it also consciously brings those different experts together in jointly authored chapters mirroring the way we will have to work together as teams of diverse experts in space It creates interwoven chapters co written by various teams of psychologists lawyers engineers regulators policy experts architects and cultural studies

experts This book will enable the fielding and addressing of the difficult questions that need to be considered before space habitation may be a successful and sustained mode of existence This book fills a gap in the area of space studies which tends to focus on narrow discipline specific issues It provides a thought provoking launchpad for further work in this area and above all stresses the needs of the human in a hostile environment

The Earth as Transformed by Human Action B. L. Turner, William C. Clark, Robert W. Kates, John F. Richards, Jessica T. Mathews, William B. Meyer, 1993-01-29 The Earth as Transformed by Human Action is the culmination of a mammoth undertaking involving the examination of the toll our continual strides forward technical and social take on our world The purpose of such a study is to document the changes in the biosphere that have taken place over the last 300 years to contrast global patterns of change to those appearing on a regional level and to explain the major human forces that have driven these changes The first section deals strictly with the major human forces of the past 300 years and the second is a detailed account of the transformations of the global environment wrought by human action The final section examines a range of perspectives and theories that purport to explain human actions with regard to the biosphere

Earth System Science: A Very Short Introduction Tim Lenton, 2016-02-25 When humanity first glimpsed planet Earth from space the unity of the system that supports humankind entered the popular consciousness The concept of the Earth's atmosphere biosphere oceans soil and rocks operating as a closely interacting system has rapidly gained ground in science This new field involving geographers geologists biologists oceanographers and atmospheric physicists is known as Earth System Science In this Very Short Introduction Tim Lenton considers how a world in which humans could evolve was created how as a species we are now reshaping that world and what a sustainable future for humanity within the Earth System might look like Drawing on elements of geology biology chemistry physics and mathematics Lenton asks whether Earth System Science can help guide us onto a sustainable course before we alter the Earth system to the point where we destroy ourselves and our current civilisation ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Living with the Earth Gary S. Moore, 2007-04-05 Includes all the bells and whistles you and your students have come to expect It's hard to imagine a book more innovative and groundbreaking than Living with the Earth Concepts in Environmental Health Science Third Edition The first edition won the CHOICE award for Outstanding Academic Book and both previous editions became bestsellers in their

Thermodynamic Foundations of the Earth System Axel Kleidon, 2016-03-11 An accessible book for graduate students and researchers that describes how the laws of thermodynamics apply to Earth system processes

The Unconstructable Earth Frédéric Neyrat, 2018-10-16 Winner Grand Prize French Voices Award for Excellence in Publication and Translation The Space Age is over Not at all A new planet has appeared Earth In the age of the Anthropocene

the Earth is a post natural planet that can be remade at will controlled and managed thanks to the prowess of geoengineering This new imaginary is also accompanied by a new kind of power geopower that takes the entire Earth in its social biological and geophysical dimensions as an object of knowledge intervention and governmentality In short our rising awareness that we have destroyed our planet has simultaneously provided us not with remorse or resolve but with a new fantasy that the Anthropocene delivers an opportunity to remake our terrestrial environment thanks to the power of technology Such is the position we find ourselves in when proposals for reengineering the earth s ecosystems and geosystems are taken as the only politically feasible answer to ecological catastrophe Yet far from being merely the fruit of geo capitalism this new grand narrative of geopower has also been activated by theorists of the constructivist turn ecomodernist postenvironmentalist accelerationist who have likewise called into question the great divide between nature and culture With the collapse of this divide a cyborg hybrid flexible nature has been built an impoverished nature that does not exist without being performed by technologies that proliferate within the space of human needs and capitalist imperatives Underneath this performative vision resides a hidden anaturalism denying all otherness to nature and the Earth no longer by externalizing it as a thing to be dominated but by radically internalizing it as something to be digested Constructivist ecology thus finds itself in no position to confront the geoconstructivist project with its claim that there is no nature and its aim to replace Earth with Earth 2 0 Against both positions Neyrat stakes out the importance of the unconstructable Earth Against the fusional myth of technology over nature but without returning to the division between nature and culture he proposes an ecology of separation that acknowledges the wild subtractive capacity of nature Against the capitalist technocratic delusion of earth as a constructible object but equally against an organicism marked by unacknowledged traces of racism and sexism Neyrat shows what it means to appreciate Earth as an unsubstitutable becoming a trajet that cannot be replicated in a laboratory Underway for billions of years withdrawing into the most distant past and the most inaccessible future Earth escapes the hubris of all who would remake and master it This remarkable book which will be of interest to those across the humanities natural sciences and social sciences from theorists to shapers of policy recasts the earth as a singular trajectory that invites humans to turn political ecology into a geopolitics

The Angry Earth Anthony Oliver-Smith, Susanna Hoffman, Susanna M. Hoffman, 2019-12-06 The Angry Earth explores how various cultures in different historical moments have responded to calamity offering insight into the complex relationship between societies and their environments From hurricanes floods and earthquakes to oil spills and nuclear accidents disasters triggered by both natural and technological hazards have become increasingly frequent and destructive across the planet Through case studies drawn from around the globe the contributors to this volume examine issues ranging from the social and political factors that set the stage for disaster to the cultural processes experienced by survivors to the long term impact of disasters on culture and society In the second edition each chapter has been updated with a postscript to reflect on recent

developments in the field There is also new material on key present day topics including epidemics drought non governmental organizations and displacement and resettlement This book demonstrates the relevance of studying disaster from an anthropological perspective and is a valuable resource not only for anthropologists but for other fields concerned with education policy and practice
