Nature, Cognition and System I M.E. Carvallo, 2012-12-06 usually called the classical scientific attitude according to which there is a dichotomy between nature and cognition and suggestions for better understanding of their mutual encroachment The authors belong

more or less to the non standard systems science the third order cybernetics or find themselves already beyond the third stage in the history of artificial intelligence They take the inescapability of the mutual implication of the description of nature and that of cognition seriously Fourth ly closely linking up with the previous it emphatically calls attention to the forgotten microscopic dimension of science If I am not mistaken we have at this moment reached the historic stage where the tremendous renaissance of the mechanistic structural paradigm remarkably enough calls for its functional dynamic counterparts The volume strives to respond to this secret trend in various disciplines and to put into words that which is tacitly alive in the minds of the ever increasing number of people in this systemsage The investigation on the intertwinement of nature and cognition finds itself in this very paradoxical niche structured by those two opposite developments
