Michael S. Gazzaniga

The Mystery Of Consciousness:

The Mystery of Consciousness John R. Searle, 1990-01-01 It has long been one of the most fundamental problems of philosophy and it is now John Searle writes the most important problem in the biological sciences What is consciousness Is my inner awareness of myself something separate from my body In what began as a series of essays in The New York Review of Books John Searle evaluates the positions on consciousness of such well known scientists and philosophers as Francis Crick Gerald Edelman Roger Penrose Daniel Dennett David Chalmers and Israel Rosenfield He challenges claims that the mind works like a computer and that brain functions can be reproduced by computer programs With a sharp eye for confusion and contradiction he points out which avenues of current research are most likely to come up with a biological examination of how conscious states are caused by the brain Only when we understand how the brain works will we solve the mystery of consciousness and only then will we begin to understand issues ranging from artificial intelligence to our very nature as human beings

From Science to God Peter Russell, 2010-02-08 Peter Russell's book is not only eminently readable but also a vitally important contribution to the awakening of human consciousness Eckhart Tolle author of The Power of Now From Science to God offers a crash course in the nature of reality It is the story of Peter Russell's lifelong exploration of the nature of consciousness of how he went from being a convinced atheist studying mathematics and physics to realizing a profound personal synthesis of the mystical and scientific Russell invites us to cross that bridge to a radically different and ultimately healing view of ourselves and the universe one in which God takes on new meaning and spiritual practice a deeper significance
