The Neandertal Enigmas Solving The Mystary Of Modern Human Origins:

The Neandertal Enigma James Shreeve, 1996 In recent years revolutionary developments in fossil dating and the spectacular entrance of genetic research into the origins debate have sent the anthropological establishment into an uproar The old comfortable explanations for how and where our species evolved have been utterly destroyed Left behind is a tangle of new mysteries not just in Europe but all over the Old World The key to unraveling them lies with the Neandertals

Conceptual Issues in Modern Human Origins Research Geoffrey A. Clark, Catherine M. Willermet, While those who study human origins now agree that the evolution of modern human form extends back much further in time than the evolution of modern human behavior they disagree sharply as to how to interpret the substantive data Two fundamentally incommensurate interpretations of our origins the Replacement camp and the Continuity camp have now emerged out of pre existing models and theories that go back to the last quarter of the 19th century This book contends that these positions are based on radically different biases and assumptions about what the remote human past was like The purpose of this volume is to examine those conceptual differences not to arrive at a consensus but rather to explore the reasons why a consensus might never be possible *Human Evolution* Brian Regal, 2004-11-23 A fascinating and wide ranging look at the controversies surrounding the search for the origins of the human species Written for those new to the subject *Human Evolution A Guide to the Debates* presents the remarkable history of our understanding of human origins as it developed from the 1800s to the present Most works on this topic focus narrowly on one individual theory or debate In contrast *Human Evolution* draws from a wide range of sources to offer a fully rounded portrait of the entire field The chapters of the book follow a basic chronological order covering the issues personalities and discoveries that are central to the questions and controversies surrounding human evolution The coverage draws from a wide range of associated topics and examines not only controversies of a religious nature but also those that have little to do with religion allowing readers to weigh the information come to their own conclusions and even begin their own debates **Human Evolution** John L.

Bradshaw, 2014-01-02 The last decade has seen an explosive burst of new information about human origins and our evolutionary status with respect to other species We have long been considered unique as upright bipedal creatures endowed with language the ability to use tools to think and introspect We now know that other creatures may be more or less capable of similar behaviour and that these human capacities in many cases have long evolutionary trajectories Our information about such matters comes from a diverse variety of disciplines including experimental and neuropsychology primatology ethology archaeology palaeontology comparative linguistics and molecular biology It is the interdisciplinary nature of the newly emerging information which bears upon one of the profoundest scientific human questions our origin and place in the animal kingdom whether unique or otherwise which makes the general topic so fascinating to layperson student and expert alike The book attempts to integrate across a wide range of disciplines an evolutionary view of human psychology with

particular reference to language praxis and aesthetics A chapter on evolution from the appearance of life to the earliest mammals is followed by one which examines the appearance of primates hominids and the advent of bipedalism There follows a more detailed account of the various species of Homo the morphology and origin of modern H sapiens sapiens as seen from the archaeological palaeontological and molecular biological perspectives The origins of art and an aesthetic sense in the Acheulian and Mousterian through to the Upper Palaeolithic are seen in the context of the psychology of art Two chapters on language address its nature and realization centrally and peripherally the prehistory and neuropsychology of speech and evidence for speech and or language in our hominid ancestors A chapter on tool use and praxis examines such behaviour in other species primate and non primate the neurology of praxis and its possible relation to language Encephalization and the growth of the brain phylogenetically and ontogenetically and its relationship to intellectual capacity leads on finally to a consideration of intelligence social intelligence consciousness and self awareness A final chapter reviews the issues covered The book of around 70 000 words of text includes over 500 references over half of which date from 1994 or later

Where Do We Come From? Jan Klein, Naoyuki Takahata, 2013-03-09 From the moment it first began to contemplate the world three questions have occupied the human mind Where do we come from What are we Where are we going Artists notably Paul Gauguin religious thinkers philosophers and most recently scientists have all searched for answers Here the authors describe how scientists decipher human origin from the record encrypted in the DNA and protein molecules After explaining the nature of descent and the methods available for studying genealogical relationships they summarize the information revealed by the molecular archives about the Tree of Life and our location on one of its branches The knowledge thus gleaned allows them to draw conclusions about our identity our place in the living world our future and the ethical implications of the changed perspective
